In article <9411242015.0SGRT00@shivasys.com>, buddy.sohl@shivasys.com says...

>Common beginner belief. However it has been my experience
>that once an individual masters morse it does not become he
>drudgery it first appears. I have held an extra class
>license for 15+ years and do not operate CW conversationally
>but I do enjoy the CW test or the occasional QSO.

> See above. You will be surprised. I just fininshed up CW
> Sweepstakes at my shack and as a first was a multi-op
> entry. All three guest ops were tech + or less. Since the
> test two have upgraded to general and have their eyes on
> extra by the end of the year.

Good to see you browsing around here, Buddy. One of the practical points I ran into in my "quest to avoid code at all costs" was that I was missing a grand opportunity to have a lot of fun. I readily admit that as much as a year ago I had almost the same view of CW -- it's a bore and worthless as a communications medium. Unfortunately, I had the pleasure of working Field Day this year and the dit-dah stuff intrigued me enough to open my mind and reconsider my position. Having successfully passed the 5wpm code test, there's no looking back. I am literally having the time of my life working slow-to-moderate speed CW on 10 meters.

By the way, Buddy, thanks a million for allowing us the opportunity to work multi-op at your station. For those of you that haven't tried working Sweepstakes and are learning CW, I heartily recommend a good 24 hour dose. :-) I went into Sweepstakes copying well at 8wpm but copying nothing at 13wpm. By Saturday afternoon, thanks to your advice and tips, I was copying fairly well -- not perfectly but fairly well -- at 13wpm and was copying bits and pieces at 35wpm. I probably could have shot straight to 13wpm -- possibly faster -- if I had stuck with it the entire 24 hour period.

Anyway, I have but one argument for the code requirement. It is a fun mode of communication that I and many others thoroughly enjoy. I have found that most people so adamantly opposed to learning CW have never tried learning it. I guess it's a bit like kids that don't like brussels sprouts -- you never know until you jump in with both feet.

Good point, and one that I hadn't considered before. I think this is
particularly important in this day and age where many people expect
instant gratification. Some things in life are worth earning.

: : 73 de AA2TF

so what do you want? a $150 one time fee for anyone that wants a specific call or is unhappy with the luck of the draw...or $7/year for the entire amateur population? right now your license is free. they need to set the amount high enough to stop "thrashing"..

I'm certain your brother and sister amateurs that are actually happy with their calls would not consider having to pay $70 at renewal time so you could go 20 years before exceeding the "application fee" price a "deal".

and it's not high if you consider the plan is to hold down the number of applicants to a manageable number (you pick 25 calls..get the first one on the list that is available...even if it means you get the old one back (choice 26..) and you get to pay $150 for this...)

let's do this so we don't help the government find more money in our pockets...(say 700,000 x 70 = a cool 49 mil...) especially when our "contributions" won't result in any major changes for the average guy.

3158. Re: Telephone RFI

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-27 19:22:54 UTC
From: GKGB08A@prodigy.com
Message-ID: <3bamae$31hs@usenetp1.news.prodigy.com>
Source record: 256115

In regard to telephone interference, I've had great luck with both the K-Comm and International
Communications Engineers' filters. My wife's in Real Estate Sales, and I'd be off the air
without them on our phones. Both companies advertize in QST. The K-Comms are also available
from AES or Erickson in Chicago. I keep a set in the shack to lend to neighbors who buy new
phones and then call me to complain that I must have changed something in the shack since
they now have RFI interference. Good luck.

Hi Everybody!

I'm looking for information about Ham Radio Magazine.

- Is it still published?
- Where can I subscribe to it?
- Do they have a WWW page?

Many thanks in advance to whoever will find the time to give me this info.

Cheers!

Sergio Manzi (IW3GTH)

3160. What *IS* considered buisness

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-27 20:14:03 UTC
From: chamber@netcom.com
Message-ID: <chamberCzy07G.HKF@netcom.com>
Source record: 256116

Our club (the Amateur Radio CLub for the high school) has been considering taking the current broadcast of high school games, which is currently a week later after they have been edited, and making a live, onsight "van" and transfering the video with Fast Scan ATV to the cable company. However, a question arises about the legality, or with the spirit of ham radio... In that the cable company obviosly charges a monthly fee.

thanx in advance,
chamber@netcom.com

: Thanks and 73,

: Tony
: K4KYO

First, I would remark that you are lucky to have such nice neighbors! The best solution is a "bullet-proof" telephone. These are made by at least two vendors in Texas. They have two drawbacks: First, only standard desk sets are available, nothing with memories, speakerphones, or any of the other goodies that we have become used to; Second, they are expensive, plan on $50 per telephone. The good news is that work about 99% of the time.

The next best solution is an external filter. I believe the best one for HF interference is the TII model 831-W1. You can not order direct from the factory, but Graybar usually stocks them. They are about $15.

Finally, you could try one of the other filters, such as the AT&T Model Z-100, or build one. Unless your junk box is unusally well stocked, the $15 cost of the TII is less than the cost of buying the parts separately. I would purchase one, then test each affected telephone to see if it cures the interference problem.

By the way, the TIA (Telecommunications Industry Association) just put into place a voluntary standard that should help reduce future interference problems. It requires that new phones operate properly in a 3 V/m field and/or with 3 volts on the phone lines. Unfortunately, phones made before 1995 are not covered and the standard is voluntary.

GW>Galen, KF0YJ

Well Galen, one of the BIG signals on 160m AM is from K4KYV.
I believe that Don is in Southern Kentucky still. A nice guy
with a great antenna and a great homebrew QRO station.
I can hear him well on my portable DX-380 receiver with the
whip antenna some evenings up around 1985 kHz or so!

From: abraun@alb.med.itc.com (Alan Braun)
Subject: Need help with 5-band WAS

I'm kind of new to Internet news groups so if I'm posting this in the
wrong place please don't flame me.

I am very close to completing 5-band Worked All States, and I'd like to
schedule some contacts to fill in the 4 gaps I have. I need QSO's (and
QSL's) for 15-meter contacts from Nebraska, South Dakota, West Virginia
and Delaware. I live in central Missouri and have been unable to hear
those places is SS and various other contests. I will work any mode at any
time the band is open, preferably on a weekend due to my irregular work
schedule. If someone living in one of those states is willing to help, I
would love to hear from them.
Thanks and 73 - Alan NS0B

Subject: No-Code Techs & CW (

In article <6e.7165.332@cencore.com>, forrest.gehrke@cencore.com says...

>> Hey gang, can we take this discussion to rec.radio.amateur.policy -
>> pleease?

>I second the motion. How many times do we have to read the
>same set of arguments? The controversy belongs in the policy
>group and those that are interested can carry on there.
>--k2bt

For what it's worth, perhaps rec.radio.amateur.policy should be renamed
to rec.radio.amateur.lids.fight.fight.fight.

> test two have upgraded to general and have their eyes on
> extra by the end of the year.

Good to see you browsing around here, Buddy. One of the practical points I ran into in my "quest to avoid code at all costs" was that I was missing a grand opportunity to have a lot of fun. I readily admit that as much as a year ago I had almost the same view of CW -- it's a bore and worthless as a communications medium. Unfortunately, I had the pleasure of working Field Day this year and the dit-dah stuff intrigued me enough to open my mind and reconsider my position. Having successfully passed the 5wpm code test, there's no looking back. I am literally having the time of my life working slow-to-moderate speed CW on 10 meters.

By the way, Buddy, thanks a million for allowing us the opportunity to work multi-op at your station. For those of you that haven't tried working Sweepstakes and are learning CW, I heartily recommend a good 24 hour dose. :-) I went into Sweepstakes copying well at 8wpm but copying nothing at 13wpm. By Saturday afternoon, thanks to your advice and tips, I was copying fairly well -- not perfectly but fairly well -- at 13wpm and was copying bits and pieces at 35wpm. I probably could have shot straight to 13wpm -- possibly faster -- if I had stuck with it the entire 24 hour period.

Anyway, I have but one argument for the code requirement. It is a fun mode of communication that I and many others thoroughly enjoy. I have found that most people so adamantly opposed to learning CW have never tried learning it. I guess it's a bit like kids that don't like brussels sprouts -- you never know until you jump in with both feet.

> As such I'd say your conclusions are flawed. Sure even the
> most limiting of test will allow a few scumbags to slip
> through the cracks, but the code IMO is a filter that shows

> bond. Boy Scouts don't give the Eagle badge away, nor
> should we give away those cherished operating practices.

Good point, and one that I hadn't considered before. I think this is particularly important in this day and age where many people expect instant gratification. Some things in life are worth earning.

GW>Galen, KF0YJ

Well Galen, one of the BIG signals on 160m AM is from K4KYV.
I believe that Don is in Southern Kentucky still. A nice guy
with a great antenna and a great homebrew QRO station.
I can hear him well on my portable DX-380 receiver with the
whip antenna some evenings up around 1985 kHz or so!

~ SLMR 2.1a ~ A seminar on Time Travel will be held two weeks ago.

Subject: DXCC countries list

DXCC UPDATE August 1994 (DXNS Sheet 1628).

DATE PFX DXCC Country Remarks Total

Jan 1987 3Y Peter 1 Island added 317

Apr 1988 P4 Aruba added WEF 1 Jan 86 318
S0 Western sahara added Undeleted 319

May 1989 4J1 M-V Island added 320
3D2 Rotuma Island added 321

May 1990 3D2 Conway Reef added 322
T33 Banaba Island added 323
ZS9 Walvis Bay added WEF 1 Sep 77 324

Mar 1991 Y2 East Germany deleted WEF 2 Oct 90 323
4W North Yemen deleted WEF 21 May 90 322
7O South Yemen deleted WEF 21 May 90 321
7O Yemen added WEF 22 May 90 322

Sep 1991 ZS1 Penguin Island added 323

Jan 1993 4N4/T9 Bosnia-Hercegovina added WEF 15 Oct 91 324
9A Croatia added WEF 26 Jun 91 325
S5 Slovenia added WEF 26 Jun 91 326

Jun 1993 A1 Abu Ail Islands deleted WEF 31 Mar 91 325
OK Czechoslovakia deleted WEF 31 Dec 92 324
OK Czech Republic added WEF 1 Jan 93 325

OM Slovak Republic added WEF 1 Jan 93 326
4N5/Z3 Macedonia added WEF 9 Aug 91 327

Jan 1994 E3 Eritrea added WEF 24 May 91 328
Undeleted

Apr 1994 ZS1 Penguin Island deleted WEF 1 Mar 94 327
ZS9 Walvis Bay deleted WEF 1 Mar 94 326

NOTES:
1. North Korea, P5 remains "attached" to the list but will not be officially added until an accredited operation takes place.

2. Petitions currently pending DXAC consideration include:
Pratas Island, Scarborough Reef, Marquesas Is (94), Astral Is (94) and Balleny Islands.

3. There are 57 deleted countries. Remember, if you worked a country before it was deleted, the QSL card showing a qualifying date may still be submitted for DXCC credit for your All-Time total.

From: abraun@alb.med.itc.com (Alan Braun)
Subject: Need help with 5-band WAS

I'm kind of new to Internet news groups so if I'm posting this in the
wrong place please don't flame me.

I am very close to completing 5-band Worked All States, and I'd like to
schedule some contacts to fill in the 4 gaps I have. I need QSO's (and
QSL's) for 15-meter contacts from Nebraska, South Dakota, West Virginia
and Delaware. I live in central Missouri and have been unable to hear
those places is SS and various other contests. I will work any mode at any
time the band is open, preferably on a weekend due to my irregular work
schedule. If someone living in one of those states is willing to help, I
would love to hear from them.
Thanks and 73 - Alan NS0B

Good to see you browsing around here, Buddy. One of the practical points I ran into in my "quest to avoid code at all costs" was that I was missing a grand opportunity to have a lot of fun. I readily admit that as much as a year ago I had almost the same view of CW -- it's a bore and worthless as a communications medium. Unfortunately, I had the pleasure of working Field Day this year and the dit-dah stuff intrigued me enough to open my mind and reconsider my position. Having successfully passed the 5wpm code test, there's no looking back. I am literally having the time of my life working slow-to-moderate speed CW on 10 meters.

By the way, Buddy, thanks a million for allowing us the opportunity to work multi-op at your station. For those of you that haven't tried working Sweepstakes and are learning CW, I heartily recommend a good 24 hour dose. :-) I went into Sweepstakes copying well at 8wpm but copying nothing at 13wpm. By Saturday afternoon, thanks to your advice and tips, I was copying fairly well -- not perfectly but fairly well -- at 13wpm and was copying bits and pieces at 35wpm. I probably could have shot straight to 13wpm -- possibly faster -- if I had stuck with it the entire 24 hour period.

Anyway, I have but one argument for the code requirement. It is a fun mode of communication that I and many others thoroughly enjoy. I have found that most people so adamantly opposed to learning CW have never tried learning it. I guess it's a bit like kids that don't like brussels sprouts -- you never know until you jump in with both feet.

> As such I'd say your conclusions are flawed. Sure even the
> most limiting of test will allow a few scumbags to slip

Good point, and one that I hadn't considered before. I think this is particularly important in this day and age where many people expect instant gratification. Some things in life are worth earning.

3166. RAIN Dialup for 11/25-12/01

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-27 21:31:48 UTC
From: Hap Holly <Hap.Holly@f747.n115.z1.fidonet.org>
Message-ID: <785950308@f747.n115.z1.ftn>
Source record: 256125

The November 25-Dec. 1, 1994 edition of the RAIN Dialup (708/827-RAIN) includes:

"He Had A Dream"
Jim Hendershot/WA6VQP, founder of the Amateur Radio Newsline (formerly WestLink Radio Network) recalls its early days in celebration of Newsline's 900th newscast.

The program material heard each week on the RAIN Dialup is available on audiocassette for significantly less than long distance charges. For details call RAIN's voice mail (708/518-6551) and leave your name, call sign, and mailing address.

The RAIN Dialup is now heard in West Los Angeles, 7:30 PM, Sundays on the WA6QAG repeater/N6TAF remote, serving greater L.A. on 447.325 MHz with 103.5 Hz PL access.

3169. callsign.cs.buffalo.edu server

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-27 22:18:37 UTC
From: mconner@rain.atms.purdue.edu
Message-ID: <3bb0jt$lur@mozo.cc.purdue.edu>
Source record: 256119

I think the last update to this server was sometime around Oct-Nov 93
the last time I tested it out (tried out calls in alphabetical order
until it didn't find anything). I've had my license since July and
it's still not in there.

The QRZ database on the net is more up-to-date, but it only returns
the name/address if you already know the call - you can't search on
names or cities.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 27/2330Z NOVEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 27 NOVEMBER AND FORECAST FOR 28 NOVEMBER - 30 NOVEMBER

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 80/20

GOES satellite data for 26 Nov
Daily Proton Fluence >1 MeV: No data
Daily Proton Fluence >10 MeV: 1.2E+04
Daily Electron Fluence >2 MeV: 2.1E+06 (normal)
X-ray background: A6.4
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
28 Nov 29 Nov 30 Nov
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 28 Nov: 83/24

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active to minor storm, during local
night.

Estimated Indices : A K Observed A Index 26 Nov
Learmonth 21 3335 4432
Fredericksburg 21 24
Planetary 25 39

Observed Kp for 26 Nov: 0247 7332
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
28 Nov 18 Unsettled to active
29 Nov 16 Unsettled to active
30 Nov 10 Unsettled
COMMENT: Minor storm levels were observed during local night.
Geomagnetic activity is expected to decline over the next two days.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
27 Nov normal fair fair-poor
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
28 Nov normal fair poor
29 Nov normal fair poor
30 Nov normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
27 Nov -15 depressed 15-30% during daylight hours, recovering
during local night.

Predicted Monthly T-index for November: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
28 Nov 0 10 to 15% below predicted monthly values
29 Nov 10 Near predicted monthly values
30 Nov 15 Near predicted monthly values
COMMENT: Spread F was observed at Sydney during local night last
night. Townsville station showed depressions of 15-20% during daylight
hours. Further depressions are expected during the first half of today
then recovering.

3173. Contacts with VE3ONT

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-27 23:39:05 UTC
From: Wayne_Estes@csg.mot.com
Message-ID: <9411271739.ZM26637@SALCIUS2>
Source record: 256120

I'm wondering what was the minimum power and antenna gain used to make 2-way EME contact with VE3ONT.

My setup:

80 watt amplifier in the shack, with 55 feet of flexible 9913 coax to a 14 el RHCP yagi. 100 Hz DSP bandpass filter and a mast-mounted 0.8 dB N.F. preamp.

My results:

I could hear VE3ONT on 144.100 MHz with considerable fading, but could *NOT* get a response to my call on 144.104 MHz near the end of the operation when VE3ONT was calling CQ over and over.

3175. Re: What *IS* considered buisness

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-28 00:32:25 UTC
From: Peter Coffee AC6EN <72631.113@CompuServe.COM>
Message-ID: <3bb8epklk1@mhadg.production.compuserve.com>
Source record: 256123

Hmmm...if no ham involved is compensated, that would make it OK, wouldn't it?

If the cable company were monitoring a transmission from one ham station to another, and if the cable company then sold the result to its subscribers, that would not be OK unless the participating stations authorized it -- right?

But if the participating stations authorize any receiving station to do as they please with the signal, and if no licensed ham is involved in the reception and retransmission by the cable company or otherwise employed by the cable company, then does this become a community service on the part of the hams with the cable company merely reporting this service -- in full?

Does this argument connect from end to end?

3176. Conversion of Uniden CB to 10 meters

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-28 00:33:08 UTC
From: karl@tyrell.net
Message-ID: <CzyC79.M0p@tyrell.net>
Source record: 255978

I have recently made a partial conversion of a late 1970's PLL CB rig, President Model Washington, to 10 meters. The PLL loop fundamental crystal was changed to 11.535 MHZ and receive/transmit coils/pots then peaked. However, I would also like to convert the clarifier to be active on both transmit and receive, thereby allowing additional frequency coverage.

I believe, but don't know, that the clarifier pot biases the voltage applied by the varactor to the PLL chip. This normally occurs only during receive and is inhibited by a diode during transmit.

The "President" series of CB radios were manufactured by Uniden. Calls to Uniden have turned up nothing. Has anyone made this mod or know of a schematic or Sams PhotoFax for this rig?

All replies are appreciated. Tnx de Karl ... KD5LR

TS>Unfortunately, I've discovered that my telephone interference is a lot
TS>worse that I had imagined. My neighbors have just been nice and haven't
TS>been saying anything. One casually mentioned that it was a bit of a
TS>problem (and apologized for doing so!), so I started asking around and
TS>discovered that 2 out of 3 I've asked have had a problem.

TS>I've gotten hold all the information I could find and the ARRL has bent
TS>over backwards being helpful. The literature and theory is nice, but
TS>nothing substitutes for real-life experiences. I would therefore
TS>appreciate your suggestions.

Tony - a recent issue of (I think it was QST) QST had a n article
about this with details of an FCC study that showed which phones
worked well, and which add-on filters helped (Most didn't!)

Ask around. I'm sure someone will know about it. I think your best bet
is to tell them 1) There is NO protection for the "cordless phones"
since they use a cheap broad-bandwidth receiver that will easily
overload anywhere near a transmitter. And 2) maybe suggest an
add-on filter for their phone lines. But see the article first.
Maybe some ferrite cores around the phone lines in strategic places
within their homes would help too. We have RFI in the phones
here but almost always it is only in the cordless. So they just stay
off that phone when I am on the air.

BH>: I am very troubled by the proposed Vanity call fee. Recently, a member of
BH>: our ARRL representation for SE NY told us at a club meeting that the ARRL
BH>: supports the proposed lifetime fee of $150.00. He also told us that the
BH>: actual processing cost is only $7.00! The OMB sets the fee and when asked
BH>: in a letter to the ARRL, Steve Ford replied that the ARRL supports this
BH>: fee for a number of rather weak reasons. I thought that the ARRL
BH>: represents our interests! How do others feel about this high fee and the
BH>: ARRL's position?
BH>: 73 de AA2TF
```

It's a real stomach turner because it again raises the wealthy
to an un-earned elite position in hamdom. Why don't they just
sell the ham bands to the richest hams just like they do the
UHF/SHF frequencies if they are going to do unjust stupidity like this
to grub more REVENOO?

Ohio/Penn DX Bulletin No. 184

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 184
BID: $OPDX.184
November 28, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB4IUX, WB6GFJ, N6BIS, N8AC, DL7VEE & DXNL and ZL1AMO for the following DX information.

8P, BARBADOS. Marian, KB9EKO, and Myron, K9JJR, will be active from here starting next weekend through December 12th. Their activities on the bands were not mentioned, but their callsigns will be 8P9CT and 8P9DC, respectively.

8Q, MALDIVES ISLAND. NODXA member Tom, DL7UTM (aka H44XO, 3D2XO, T21XO and Y31XO) will be active as 8Q7XO during the holidays (presuming around Christmas and New Years).

9H, MALTA. NODXA members Birgit, DL7VTZ, and Holgert, DL7VTM, will be active from here (possibly Gozo Island) for two weeks at the end of March 1995. They plan to be active in a CQWW contest. Both were active earlier in the year from Zambia as 9I2M and 9I2Z.

BV, TAIWAN. (Update and reminder!) Tom, WB4IUX, has announced over the weekend that he will definitely be active (as BV/WB4IUX) November 29th, starting around 1215z. He will be operating from Tony's (BV2TA) shack. During the three day stay, his primary frequenies will be 3508 to 3512 kHz (depending on local QRM). If 80 meters is closed to North America, he will try 7008-7012 kHz. On his second day, he will try to operate on 160 meters. On his final day (November 30th), Tom will be active on 20 meters SSB (around 14200 kHz) during the U.S.'s evening hours.

VI0, ANTARCTICA. Eddie, VK4EET, is currently active and operating under the callsign VI0ANT. It is expected that he is going to be there through the Antarctica summer (March 1995). He plans to be on the air everyday from 1130z until 1630z on weekdays and whenever the bands are open on weekends (especially during DX contests). His preferred mode is CW, then SSB, but he can also work RTTY/AMTOR on request. He will be active on all HF bands but mainly the low bands. Suggested frequencies:
CW - 3502, 7005, 14005, 21005 and SSB - 3798, 7070, 14190, 21295 kHz.

QSL via home call VK4EET. The XYL, Mina (VK4BMD), will handle urgent QSL requests, with verification from Eddie. Bureau cards will be answered on his return to VK4 in April 1995. Other operators are also active from here using the VK0 prefix. Phil, VK4FPS, is active as VK0FPS on SSB and all digital modes. QSL to VK3MA. He will be here until December 1995. Lances, VK7ERZ, is active as VK0ERZ. He is occasionally active on SSB and prefers to ragchew. He will be active until March 1995.

ZL7, CHATHAM ISLAND. Well known DXer Ron, ZL1AMO, informed OPDX that he will be active from here, December 10-20th. Ron usually likes operating on CW mainly on the low bands and the WARC bands but states he will also be active on SSB and RTTY.

THE FOURTH ANNUAL OPDX/NODXA DX SURVEY FOR 1994
Here is your chance to be counted. Deadline will be January 31, 1995, with results in February. The questions of the survey will deal with:

1) The DXer of the year. This is a DXer who you thought was outstanding in operating and handling the pile-ups from their DXpedition.
2) DXpedition of the Year (Group and Indivdual). Choose the best and most well organized DXpedition that met the needs of the DX community.
3) The 30 Most Wanted Countries. Choose your 30 most wanted countries.
4) OPTION: Your personal comments about DXing in 1994.

Please use the ballot below. Votes will only be accepted in the following format below.

```
---------------------------------------------------------------------
Your | DXer of the Year| DXpedition of the| DXpedition of the
Callsign | (Person) | Year by a person | Year by a group
and QTH | | |
---------------------------------------------------------------------

Mike: I have both the Heath SB-401 xmtr and the SB-303 rcvr. Also, I have a
Heath SB-101 transceiver. Heath made a line of receivers, xmtrs, and xcvrs. I
forget all the model numbers but they are still good pieces of eqpt for
beginers -- you can get them moderate prices -- and I keep mine as standby.
The old eqpt does use vacuum tubes. These are devices about which lots of
young guys know nothing. What's a vacuum tube? The drawback to the old gear
is that it uses tubes. Tubes generate lots of heat, use of lots of
electricity, and the eqpt requires a warm-up period before it really stabilizes
in frequency.
Anyway, you asked about cost. I live in northern Virginia, about 35 miles from
Washington, DC. At hamfests here, the SB-401 xmtrs sell for $175 to $275,
depending on condition, manuals present, etc. An SB-303 rcvr wil sell for $200
to $300, depending on condition. The SB-303 is an all solid-state receiver; it
was the first Heath eqpt to use all transistors.
If you are shopping for one, both of them have built-in power supplies. The
SB-303 requires an external speaker or headphones. And, spare parts may be
tough to get. Both use a Heath LMO (linear master oscillator) to generate the
oscillator frequencies needed by the mixer circuits. The old Heath LMO is

rugged and lasts a long time but, if it fails, you may have a problem finding a replacement. If you plan to get into the old Heath gear, keep your eye out for junked SB-400, 401, 300, 301, 100, 101 as they all use the same LMO. I keep a few trashed ones around for parts. Getting replacement tubes can be a challenge, too. Shop the pages of the ham magazines for suppliers.

Rob: For what it's worth, I use the Yaesu FT-470. It is a bit dated. I thnk
Yaesu has put out a successor to it, the FT-530, or something like that. Now,
the 470 is available used and ou may even find a dealer with some new ones.
The 470 and the 530 a bigger than the newer dual banders. A couple of years
ago ARRL ran an article in QST comparing several dual band handhelds and one of
the features mentioned by the guys who tested them was the fact that, as the
radio gets smaller, hitting the right button with adult fingers gets to be a
challenge. I am very pleased with my FT-470. Has a lot of accessories, hi-lo
power, rugged. For what it's worth.
Joe - K4FPT.

3188. Re: repeaters and intermodulation

The problem is you can't buy a dual band mobile rig without all this extra crap. Given the choice between recieving all that extra stuff, and having good intermod rejection, I would choose the latter. They can keep all the other crap.

I'm STILL willing to pay the $600, if all it does is ham bands and ham functions, I don't care if I can listen to officer friendly and his k-9 unit dispached to the local elementary school....

3189. Coax and antennas for sale!

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-28 04:33:09 UTC
From: kenh@w8hd.org
Message-ID: <3bbmi5$qmp@w8hd2.w8hd.org>
Source record: 255985

For sale:

Virtually unlimited amounts of never-used (they are tails left over from commercial installations) Andrew Heliax and Cablewave Flexwell (hams often mistakenly refer to this as 'hardline') cables.

Lengths from 10' to over 1000'. Prices?

1/2" cable is $1/ foot, 7/8" is $2.50; you pay shipping from Dearborn, MI.

Connectors are not included, but we will sell them to you at our warehouse wholesale price.

This cable is in excellent condition, and perfect for your next installation. The prices are roughly 65% below the going rate for these cables.

We also have a supply of used antennas....many in the 900 mHz region, some in 450-470, and some in the 150-170 mHz region. The inventory is far too numerous to list; if you are interested, e-mail with frequency, directional characteristics, and gain desired, and I will respond with availability and pricing. Some good deals to be had!

I don't understand the problem here. The FCC, apparently, is planning to use the vanity call sign as a money maker. They could charge $1500.00 if they wanted to. Either some high payed consultant or some reasonably astute commissioner decided that $150.00 would maximize the return. Seems reasonable to me.

Because the unbridled masses are crying for less taxation without a reduction in services, many gov. agencies are finding new commercial-like revenue streams... Seems like we should be cheering them on, not whining about not getting something for next to nothing...
Bye... Ted..

3194. EMC on CBS Eye to Eye

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-28 07:07:27 UTC
From: as041@FreeNet.Carleton.CA
Message-ID: <CzyuGF.4AE@freenet.carleton.ca>

Sorry if this has already been posted...

For those of you interested in EMC (electromagnetic compatibility) issues, CBS is touting this week's <Eye to Eye with Connie Chung> Thursday, Dec. 1, which will have a segment dealing with how the proliferation of portable transmitters (cell phones, CB radios, HTs) is affecting hospital medical equipment.

Could be worth having a peek. Eye to Eye airs at 10 p.m. ET on CBS. Check your local listings.

3196. Help with Phone Interconnect

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-28 10:38:05 UTC
From: smitty@azol.com
Message-ID: <3bcbud$q81@baygull.rtd.com>
Source record: 255994

Hello,

Im looking for a telephone interconnect and would like to put it on a 2 meter simplex frequency. I just realized that you are not supposed to remotely control anything below 220 mhz so just being able to use a mobile 2 meter rig would not work according to the rules. I would like to hear from anyone who has put a telephone interconnect on their base rig at home and how they got around this. Especially if you too are using your phone connect on a 2 meter frequency. I gather I would have to cross-band repeat in order use it on 2 meters. Please drop me a line with any suggestions or comments. Thank you..

Archive-name: ham-faq-ptr

How to find the Rec.radio.amateur.misc Frequently Asked Questions list
---

This article will tell you how to find the answers to frequently-asked
Questions (FAQ) from rec.radio.amateur.misc. The FAQ articles are posted on
the 7th and 21st of each month. This article is posted on the 14th and 28th
of every month as a reminder of where to find the FAQ.

The FAQ articles are intended to summarize some common questions on the
rec.radio.amateur.misc newsgroup and Info-Hams mail list as well as to help
beginners get started.

Besides the monthly posting, the FAQ is always available via anonymous FTP
and from e-mail servers. This article contains instructions for obtaining a
copy of the FAQ. It also contains the table of contents from the FAQ so
that you know which questions are covered by it.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.newusers newsgroup
before posting any articles. If you are an experienced user, please help by
refraining from answering frequently-asked questions on the newsgroup if they
are already answered by the FAQ articles. Instead, send e-mail to the user who
asked the question. (It will be helpful if you include the part of the FAQ
that answers their question, but not the whole thing.)

--How to obtain a current copy of the FAQ----------

There are 7 ways to obtain a copy of the FAQ.
1) World-Wide Web (WWW) and Mosaic
2) NetNews
3) Anonymous FTP
4) An Electronic Mail Server
5) Mail List Subscription
6) Gopher
7) Wide Area Information Server (WAIS)

Option #1: World-Wide Web (WWW) and Mosaic

The World-Wide Web (WWW) has experienced explosive growth in usage in 1993

and 1994. WWW clients like Lynx (in ASCII text) or Mosaic (X/Mac/Windows) can display the FAQ from many different sources. Each source is named by a URL (uniform resource locator.) If you are one of the growing numbers of people with Internet access, Option #1 is your choice. The following URL can be used to find the FAQ:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/faq/top.html

Other services listed later in this article are also accessible with WWW at the following URLs:
news:rec.radio.info
file://ftp.amdahl.com/pub/radio/amateur
file://ftp.cs.buffalo.edu/pub/ham-radio
file://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq
file://grivel.une.edu.au/pub/ham-radio/buffalo/ham-radio
file://nic.funet.fi/pub/ham/info
gopher://cc1.kuleuven.ac.be/
gopher://jupiter.sun.csd.unb.ca/
gopher://gopher.univ-lyon1.fr/
gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/
wais://rtfm.mit.edu/usenet

For more information on WWW, see the comp.infosystems.www newsgroup. Also, the help options on your WWW client should be able to point you to lots of information all over the world.

Option #2: NetNews

If you are familiar enough with NetNews to look through previous articles on your system, Option #2 above may be the easiest for you. The FAQ is posted so that it should not expire from your site's news spool until the next one is posted. Unfortunately, some news administrators do not honor the expiration dates meant to preserve the FAQ.

Look in rec.radio.amateur.misc, rec.radio.info, rec.answers, or news.answers. If the FAQ has expired at your site, try Option #3 (and ask your news administrator to honor expiration dates for articles cross-posted to news.answers if he/she can.)

Option #3: Anonymous FTP

Anonymous FTP uses the File Transfer Protocol. It is only available to sites which are directly connected to the Internet. If you don't know how to use FTP and can't find a friend to help you, continue to Option #4. If your site is not connected to the Internet, you should also continue to Option #4.

The following sites have copies of the FAQ:
site name & address path to FAQ articles
------------------ --------------------
ftp.amdahl.com pub/radio/amateur/faq.[1-3].Z
located in western USA, FAQ updated daily

ftp.cs.buffalo.edu pub/ham-radio/faq_ham_[1-3]
located in eastern USA, FAQ updated monthly
rtfm.mit.edu pub/usenet/news.answers/radio/ham-radio/faq/part*
located in eastern USA, FAQ updated monthly
contains news.answers archive - most UseNet FAQs are here
grivel.une.edu.au pub/ham-radio/buffalo/ham-radio/faq_ham_[1-3]
located in Australia, FAQ updated monthly
(Ham files mirrored from buffalo/funet/ucsd daily)
nic.funet.fi pub/ham/info/faq_ham_[1-3]
located in Finland, FAQ updated monthly

Remember, when connecting to the remote system, use the login name of
"anonymous" and, as a courtesy to the site administrators, your e-mail address
for the password.

Option #4: Electronic Mail Server

If you can't use Options 1 or 2, your only remaining option is electronic mail.
You can retreive a copy of the FAQ by sending a message to
mail-server@rtfm.mit.edu

The body of your mail will contain a command for the mail server software.
To get all of the FAQ (consisting of 70K of e-mail in 3 parts), place the
following in the first line of your message:
send usenet/news.answers/radio/ham-radio/faq/*

Leave out the subject of your message because the mail server will ignore it.

--- begin sample mail message ---
To: mail-server@rtfm.mit.edu
From: me@here.org
Date: Mon Aug 14 22:27:33 PDT 1995

send usenet/news.answers/radio/ham-radio/faq/*
--- end sample mail message ---

Option #5: Mail List Subscription

If you prefer, you may get the FAQ and other periodic Ham Radio information
as it gets posted. All the information posted to rec.radio.info can be
obtained through the UCSD list server via the "radio-info" mail list. To
subscribe, send an e-mail to
listserv@ucsd.edu
Similar to the e-mail server listed above, just send a single-line message
subscribe radio-info
If you need more information, the listserv program also accepts a "help"
command. Just keep it on a separate line in the message.

Option #6: Gopher

You can access gopher servers on TCP port 70 (gopher protocol) at the
following locations which carry the Ham Radio FAQ:
cc1.kuleuven.ac.be

jupiter.sun.csd.unb.ca
gopher.univ-lyon1.fr
ftp.win.tue.nl
gopher.win.tue.nl
For more information on gopher, see the comp.infosystems.gopher newsgroup.

Option #7: Wide Area Information Server (WAIS)

In addition to the other services mentioned above, rtfm.mit.edu offers a
WAIS server on TCP port 210. Use the "usenet" database to access the FAQ.

For more information on WAIS, see the comp.infosystems.wais newsgroup.

** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start? (2/94)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (10/94)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** On what frequencies do JPL and GSFC retransmit the shuttle audio?
(10/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Asking Questions---

If you have questions about Amateur Radio (a.k.a. Ham Radio), please read the FAQ. If your question is not answered there, check if you have any other sources (i.e. Mosaic/WWW) before proceeding. If you still don't have an answer, post your question to the most appropriate rec.radio.amateur.* newsgroup. And be sure to mention where you have already looked for the answer so people won't mistakenly tell you to try them again.

Thank you for doing your part to conserve network bandwidth!

--Submitting changes for the FAQ----------

If you have comments or updates for the FAQ, send e-mail to
hamradio-faq@amdahl.com
This will send mail to all the people on the FAQ editorial review group.

--Call for FAQ Editors----------

As with any volunteer effort, new volunteers are often needed. We need a new editor to post the Ham Radio FAQ. Preferably this should be someone who has enthusiasm for Ham Radio, experience with UseNet, and the ability to work with the other editors. No single person can know all the various aspects of this diverse hobby so the editorial review group is intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is written in PERL. So it would be a plus for volunteers to post the FAQ to have PERL installed on their system and be able to use "cron" or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer should contact hamradio-faq@amdahl.com.

I have a 1992 Mirage/KLM catalog that lists the D-1010-ATVN and D-100-ATVN
described as being "specially designed for amateur television."
Interestingly, they also say in the description for the D-1010-N that it can
be modified for ATV service (but doesn't say that warranty will be voided if
so modified). Also under D-15-N and D-26-N catalogs says "Special for ATV
Service." I noticed that in 1992, the Suggested Retail prices for the
regular and ATV versions of the D-1010 are exactly the same. I think I heard
that the only difference is addition or subtraction of a couple of capacitors.
By the way, was the buy out that you referred to KLM or was there another
since 1992?

>old klunky connectors on properly.
> - Brian

Put away the blowtorch! Just take the tip off of the Weller solder gun, and lay the PL-259 on a heat resistant surface. Then push the two parts of the gun that held the tip against the barrel of the PL-259. The heavy current that once flowed through the solder tip now flows through the PL-259, heating it fast enough to solder the shield without unduly melting the coax insulation. Make sure that all surfaces are clean where the tip holders touch the PL-259. In ASCII it looks a little like this:

Hello Wes Arnold,

I don't have any trouble to understand non English speakers. :)

BTW: Spend few weeks in learning a foreign language (Spanish, French, ..)
and you'll make a lot of good friends! I am not kidding you .. :)

Have fun and a little bit more patience with "none English speakers",

Source record: 256000

Does anyone out there know if this company is still in business:

LogiKey Division
Idiom Press
Box 583
Deerfield, IL 60015

I bought their K-1 CW keyer a little less than 2 yrs ago (which is leveraged off of the CMOS Super Keyer II that's discussed in the ARRL Handbooks, if I'm not mistaken). Well, the IC went south on the unit, so I wrote them a letter asking what their service policy is. They haven't responded, but the letter was never returned to me by the post office, either.

I guess another question to ask is if anybody knows where I can buy a replacement IC for this keyer.

Tnx in advance and 73 de KB2PWM, Steve Goldstein

Rob,on my little BBS I gathered as much Ham-related clip art as possible.I
havnt found much of it in FTP sites on the Internet.
The number is 202-333-0407,pretty much 24 hours a day 9600 bd.Look for it
on Ham Art file section.
Cheers!

In that case, you can clip a diode and have a 1999 CH mem. Not sure about the 12V -> 5 watts. The instructions say operating the 2at directly from 12V will fry it.

Yah, mine too. And it inhales in a strong RF environment. The HTX202 beats the pants off of it when trying to receive weak signals with VHF pagers operating nearby, even hooked up to a real antenna, and you can get 7W out with an external gell-cell.

Cross-posted to: aus.radio,rec.radio.amateur.misc,rec.radio.info

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS News Bulletin 837 27th November 1994

TARA RTTY SPRINT

December 10-11 1994
sponsored by Troy Amateur Radio Association, New York.

Contest period: Second full weekend in December. Starst at
2100Z Saturday and ends at 0100Z Sunday (4 hours).

Modes: RTTY only

Bands: 80, 40, 20, 15, and 10M.

Classes: A) Single op, all band; 1) Less than 150W output;
2) More than 150W. B) Multi-op, single transmitter.

Exchange: USA stations: send RST + state
Canadians: send RST + province
All others: send RST + QSO nr.

Multipliers: each USA state, DXCC country, and each Canadian
province, + VE8 and VY1. Notes: Multipliers count only once,
not once per band. KH6 and KL7 count as DXCC countries only.
USA and Canada do not count as DXCC countries.

QSO points: Count 1 point per QSO.

Final score: Total of QSO points x total of mults.

Deadline: Logs must be received by January 17, 1995. Mail to:
Bill Eddy, NY2U c/o TARA 2204 22nd Street Troy NY 12180.

Comments: Strictly a 4-hour RTTY speed contest. All rules,
scoring, bands, etc., are the same as ARRL RTTY Roundup. There
are NO band multipliers. It's a good workout for quick band
changing and tring different CQing techniques. Since the rules
are the same as the Roundup, you can use the same logging
software, too. It should be a good tune-up for the Rounduo 4
weeks later.

The next ANARTS meeting will be held on Friday 2nd December at
in Lane Cove. The meeting will commence at 7.30 pm and will

end with tea of coffee and biscuits. For further information contact Jim VK2BQS or Col VK2CTD at their QTH, or phone Pat VK2JPA at work on (02) 230 3722.

Hope to see you there.

IPS WEEKLY REPORT
---

18 NOVEMBER - 25 NOVEMBER

DATE OF ISSUE: 25 NOVEMBER 1994

INDICES:

DATE 18 19 20 21 22 23 24
10CM 80 78 79 78 76 78 79
A 5 17 23 6 6 3 (4 ESTIMATED)
T 36 33 5 28 45 10 37

SOLAR ACTIVITY WAS VERY LOW THROUGHOUT THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH WAS QUIET,OR MOSTLY QUIET 18TH, AND 21ST-24TH NOVEMBER, UNSETTLED ON 19TH, AND AT ACTIVE TO MINOR STORM LEVELS ON 20TH.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE MOSTLY NEAR NORMAL OR ENHANCED BY 15-30 PER CENT, EXCEPT FOR ENHANCEMENTS OF UP TO 50 PER CENT ON 18TH, AND DEPRESSED PERIODS OF UP TO 20TH-21ST NOVEMBER. SPORADIC E BLANKETING OCCURRED AT TIMES ON 20TH-22ND.

FORECAST (25 NOVEMBER - 01 DECEMBER)

SOLAR: VERY LOW

GEOMAGNETIC: ACTIVE TO MINOR STORM LEVELS EXPECTED DURING INTERVAL 25-27 NOV.

IONOSPHERIC: DEGRADED HF COMMS CONDITIONS EXPECTED 26-27 NOV. NEAR NORMAL ON OTHER DAYS.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

Apologies, but we have neither the VK2SG RTTY DX Notes nor the ARRLDX news this week, but we do have some DX information and hope it will fit the bill just for this week.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 182

BID: $OPDX.182
November 14, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WM2C, ND3A, WX3N, KD4ND, K4CEF & the Southeastern Cluster Group, N8HTT, K8UNP, K8MFO, WD8LLD, WD8NSD, DL5EBE, F6AJA, JAPAN DX NEWS, JE1JKL, ON6TT and VE1UK for the following DX information.

9M6, EAST MALAYSIA. Saty, JE1JKL will be active as 9M6NA for CQWW CW Contest on 20 meters single band. QSL to JE1JKL. Although he prefers exchanging QSLs via the bureau, please note that his home address has been changed recently if you want a QSL direct. The new address is: Saty Nakamura, 1-27-2, Kamiya, Ushiku, Ibaraki, 300-12 JAPAN.

A2, BOTSWANA. Dave, A22MN, says he will be operating 160 meters starting at 0300Z (November 14th) on 1827-1828 kHz. He will start on 160, then as propagation permits he will move to 80 meters (3511 Khz), then to 40 meters (no frequency mentioned). He plans to run this operating schedule for one week, then this schedule will be run every other week due to his work schedule (one week on and one week off). Dave will be leaving A2-land in mid to late March 1995. Then he is off to Helsinki for 4 years. Also, he said that ARRL CW weekend will probably be his last contest from A2.

C6, BAHAMAS. Operators WS4E, K0PP, KE7X, NF6S, and WM2C will sign C6AHX as a Multi/Single entry during the CQWW CW Contest. The group will be operating from Treasure Cay, and will have 3 stations plus lots of antennas set up. QSLs for C6AHX go to WA4WTG.

CR3/CT3, MADEIRA ISLANDS. Dominik, DL5EBE (DX-editor of CQ DL), along with DL2HYH, HB9CRV and a few others will be on Madeira island from November 25th until December 1st. They will be active during the CQWW CW Contest as CR3U (DL2HYH, 15m), CR3X (DL5EBE, 40m) and CT3FN (HB9CRV, 80m) each in single op/single band class. The DL's will be signing CT3/homecall before and after the contest on all bands including some RTTY, AMTOR, PACTOR. QSLs will be via their homecalls.

FK, NEW CALEDONIA. Serge, F6AUS, will be active as FK/F6AUS from November 17th to December 8th. He hopes to be active from Loyalty Islands (IOTA OC-033), from Huon Island (IOTA OC-058) and Belep (IOTA OC-079). He will operate on all bands CW and SSB, but watch on IOTA frequency.

FR/G, GLORIOSO ISLAND. Jacques, FR5ZU, will be active as FR5ZU/G from November 17th to December 8th. Look for him to show up on some of the French DX nets. QSL for Asia via JA8FCG and for America/Europe via VE2NW.

OT, BELGIUM. ON4WW/Mark, ON4UN/John, ON6TT/Peter, DK7PE/Rudi, DL1VJ/Bernd, RA3AUU/Harry, DL1SBR/Frank, and DJ4AX/Klaus, will be active as OT4T in a Belgian Multi/Single entry in the CQWW CW Contest. The group will be operating from ON4UN's QTH. A colored picture QSL card will be available via ON4UN (through the bureau or direct).

T32, EASTERN KIRIBATI. A group of JA operators will be active from here December 27, 1994 to January 2, 1995. Their possible callsigns may be: T32J (JR5JAQ), T32A (JA5EXW), T32Q (JR4QZH), T32X (JA4GXS) and T32O (JF4LNO YL). Activity will be on 160-6 meters CW/SSB/RTTY and there may be a possibility of satellite operations. QSL via their homecall: Masanobu Yamao/JA5JAQ, 222-44 Higasikakioi-cyo, Matsuyama-city, Ehime, Japan 791, Tsutomu Saiki/JA5EXW, 1663 Kitaumemoto, Matsuyama-city, Ehime,Japan 791-02, Shigeru Ueda/JR4QZH, 3-54-4-5 Nakano, Aki-ku, Hiroshima-city, Hiroshima, Japan 739-02, Kenji Sasaki/JA4GXS, 2-15 Ishikannon-cyo, Yamaguchi-city, Yamaguchi, Japan 753 and Masayo Sasaki/JR4LNO (YL op) same as JA4GXS QTH. Jack, KD4ND, will be traveling to Christmas Island on the 3rd of December for a bonefishing edpedition. He has applied for a license and Jack feels his callsign will be T32ND. During his 10 days stay. he will try to be active on all bands, mostly on SSB with some CW operations.

V4, ST. KITTS AND NEVIS. John/WZ8D and Joe/WB8GEX will be operating on all bands 160-6 meters CW and SSB, from November 19-27th. Their calls will be V47WZ and V47NF, respectively. They will be leaving a 3.5 watt 6-meter beacon donated by WA8R. It will be on 50055.5 kHz with a dipole at 1580 ft ASL. The beacon's callsign will be V44K.

VE0, CANADA (RARE PREFIX!). For WPX and Canadian Award hunters, the relatively rare VE0 prefix will be activated November 14-29th. Paul, VE1UK, will be signing VE0UK onboard an oceanographic research vessel during this time. He will be on all bands, 80, 40, 20, 17, 15, 12 and 10 meters, SSB only. QSL to VE1UK, 1994 callbook address.

VP2E, ANGUILLA. Operators from the Potomac Valley Radio Club (Brian/ND3F, Barry/WR3Z and Rob/ND3A) will be operating as a Multi/Multi entry during the CQWW CW Contest. They will be using the callsign VP2EZA during the contest. During non-contest periods, they will be operating on 10-160 meters CW and SSB using VP2E/homecall. QSL VP2EZA via ND3A and the other calls via the respective operator. DO NOT QSL TO THE VP2E BUREAU!

VP5, TURKS AND CAICOS ISLANDS. K8MFO, WD8AUB, W9VNE, W6RGG, WA4DRU, WT8N, W0CG, and WD8LLD will be active in the CQWW CW Contest as a Multi/Multi entry signing VP5VW. The group will be operating from the QTH of Jody, VP5JM. The operation is a tribute to longtime friend Hal Brooks, W9VW who passed away two years ago. WT8N, WD8LLD, W9VNE, and K8MFO wil share the low band duties while W6RGG, WD8AUB, WA4DRU, and W0CG will tackle the high bands. Outside the contest, each operator will be signing VP5/(his homecall). QSL cards for VP5VW go to W8TPS and QSLs for the individual contacts outside the contest go to the operator's home call.

VR2/VS6, HONG KONG. Dave, WX3N, will be returning to VS6WO's QTH for two weeks (between November 22nd and December 3). He plans to operate 80/160 meters each day starting at 1030z and continue through the Hong Kong night. On 80 he will choose from one of three frequencies to transmit on: 3.501, 3.507, or 3.513. David states that past experience shows that the eastern NA stations will have from 10 to 30 minutes to get through at sunrise. Additionally, he will simultaneously operate on 160 on 1824 or 1833 kHz. Look for VR2/WX3N outside CQWW CW Contest (he will be listening up 1 to 2 KHz above transmit frequency). For CQWW CW Contest, he will operate VS6WO Single/Op.

ZB2, GIBRALTER. Jorma/OH2KI and Peter/K8UNP will be active in the CQWW CW Contest. Jorma will operate Single Band 80 Meter CW in the contest using the call ZB2X. QSL to OH2KI. Peter will be operating as ZB2/K8UNP or K8UNP/ZB2 (depending on how they assign the call). Peter will be single op on 10, 15, or 20 meters (depending on the band conditions and when he can operate when Jorma is off the air). QSL to K8UNP.

DXAC/DXCC ACTIVITIES. DXAC members have recently received a petition for separate country status for the Kingdom of Mustang. The Kingdom is a small area bordered by Tibet and Nepal (coordinates are 29.10 N and 83.55 E).

The Kingdom of Mustang was once a part of Tibet, but was ceded to Nepal from China. It has retained its Tibetan culture and is OFF LIMITS to foreigners (EXPLORER CD). The petition states the Kingdom of Mustang has autonomy, has an independent political organization and its borders are recognized by other countries. The petition was filed by WA2FIJ and N0AFW.

The DXAC will be voting on three issues later in the month: 1) The DXCC country status of Austral Islands and Marquesas Islands, 2) The DXCC country status of Ballent Islands and 3) The establishment of a DXCC Award for Mobile Operation.

To DX from DL6RDE ---

Coming events

December 2nd ANARTS meeting

10th-1th TARA RTTY Sprint
2100z Sat.-0100z Sun.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD, or the Secretary (Pat) VK2JPA at VK2RWI.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA at VK2RWI. Email addresses for the Broadcast Officer are : patl(at)pitt.conmusic.su.oz.au
The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer
That concludes the broadcast for this morning/evening.

VK2 Div. President's message

This is Michael Corbin VK2PFQ.

There's treachery afoot once more in the ranks of Amateur Radio. Last weekend a group of malcontents and "has beens" engineered a meeting, under false pretences I have been informed, by the Secretary, at the Westlakes Amateur Radio Club.

What did they do? What did they achieve?....from what can be gathered.... nothing.. and why is this so, do you think? It's because, I believe, they are driven by the wrong motives. They preach the gospel of an eye for an eye and a tooth for a tooth. You've heard it all before and you've heard how much it cost before ....Oh!.. you haven't. Well why don't I remind you. It cost the members of the division $54,012.97.

Yes you heard correctly $54,012.97...Half of which was spent "getting even"... Trying to get rid of "undesirables".

Well I for one will never let this happen again to this division for as long as I occupy the Chair. I for one will not sit by whilst individuals such as those who organised such a meeting, once more lobby to immerse this division in a campaign of... "GETTING EVEN." How could anyone support a group whose platform is, and I'll quote from a message put out by their Minister for Propaganda ..."to examine the memberships of those members who have (done) so much harm to the division, the matter has already been determined by the best legal company in the business. If these members are found guilty, they can be reviewed so they can no longer disrupt progress of the Division" unquote.

Now where have we heard this sort of clap trap before? Hmmmmmmmm!!!!....and these blokes believe that the membership, indeed the hobby, want a return of these sorts of goings on...Do the members want the Division to spend thousands and thousands of dollars to get even.

I DON'T THINK SO. You people are going to have to come up with a better reason than this for taking over the running of the N.S.W. Branch of the W.I.A. I wonder what we could spend the $54,012.97 this rabble wants to spend, on MORE LEGAL FEES?????? The list is endless. Forget it guys. Why not, instead of this counter productive nonsense, get on with the business of enjoying Amateur Radio? Forget this "getting even" business....Bury it forever along with those ringleaders who subscribe to such a course of action.

It has been asked in some quarter, why nothing has been done about the legal business....Well it's simple....We owe the Solicitor $16,062.67....that's the $16,062.67 someone people on the last Council chose to ignore existed... Until this is paid, it's unethical of us to expect the solicitor to work for

us on anything else. Why has this not been paid....because some of the same group, have not made themselves available to sign the necessary cheque.

NO! NO! NO! Not the same cheques we had trouble with before. We fixed that other cheques business up by removing some signatures and adding others. This is a different cheque account. I won't bore you with the details except to say that it is our Investment Account .....Well these signatories were not present at the last Council Meeting and probably won't bother coming to the next one. So knockers please note....If you want the thing to go to Court it is really up to you....organise some signatures for the cheques and the account will be paid immediately. Lewarne and Goldsmith have submitted an account. An account which was, way way below what they were entitled to charge. The "A" Team, above all, should appreciate that, as it was them who dealt with Lewarne, NOT ME!

All the Legal profession goes on holidays in January. This means that all such Businesses need to get together a great deal of money to cover the Holiday Pay due to their employees. Our Solicitor have a right to expect payment for services provided. They should not be expected to go into overdraft with the bank because of a delinquent debtor.

As stated at the last Council meeting, as things are presently going, we seem likely to have this matter resolved by April. That's five months to go. Four months if you take the Legal professions' Christmas Holidays into account. Whilst this is not my own personal preference, it seems that it will be the case.

I could go on and on about this "meeting of treachery", but to what end. I'll do so when the time is right and that will be at Election time. It won't be, as my detractors would have you believe, according to the same rules they used at the last Election...It will be fairer. EVERYONE, even my detractors will get a fair go. In the true Australian tradition...that's a promise....Remember I'm......NOBODY'S MAN.....That's what probably upsets some of them the most... They thought I was... THEIR MAN.....They neglected to ....Read the label!!!!!

The next Council Meeting is set down for the 9th December. I would like to make this into a Christmas get together. Minimal business and lots of good fellowship. To this end, mark it in your diary. But more on that next week.

And don't forget that other party next weekend at Joe's place VK2KAA. She has been kind enough to make her home available, all she needs is for you to ring her....Why not straight after the Callbacks. The details are in Club News and no, she doesn't care whose side you're on....Just come along for some good old-fashioned camaraderie.

See you there....and don't forget today is TRASH AND TREASURE SUNDAY and boy oh boy, do we have some treasure for you. If you have not made an offer on that Deceased Estate gear that was in AR this month then....this is your opportunity to have a good look at it.....It is in MINT Condition....But then isn't everything that's for sale at the Trash & Treasure?

Before I go this week....You will recall that earlier in the week we had terrible storms over most parts of NSW. It seems that one member of the

Amateur Radio Fraternity, a friend of mine called Brent alias VK2PB decided that this was as good a time as any to replace the headlights in his car..... Getting together the necessary tools etc. he began to remove one of the head-lights when all of a sudden..BANG!! He was thrown to the ground but really does not remember clearly exactly what happened. Obviously he was admitted to hospital. Then followed a period of uncertainty....Another member of our group Jeffrey VK2EO relayed the message to us having heard about it on the commer-cial radio news...

The good news was that Brent was released soon after from Hospital. Many tests were made and he does not appear to have suffered any bad side effects except for some stiffness in his body and a slight stutter which fortunately gets better by the day....What a lucky escape...The moral, if there is one....Don't change your headlights before an electrical storm.....no matter how far away it is. If you do. Don't do it outside. But if you must...Do it well away from your Ham Radio mast. Fortunately the Lightning appears to have struck the Mast NOT Brent.

Brent has kindly offered to touch any Lottery Tickets or lotto numbers anyone cares to send him. Usual conditions and/or percentages apply. On that happy note. ...

See you next week.

Federal news

Restrictions lifted for UK Hams

Amateurs in the United Kingdom are now able to run more power on segments of the 180 m and 8 m bands. In addition, restrictions on antennas and effective radiated power (ERP) on 6 m have been lifted.

On 160 m, UK holders of the Class A livense may now use 400 watts output between 1810 kHz and 1850 kHz as the power restriction on the 1810-1830 kHz has been lifted. However, the power limit for the 1850-2000 kHz segment is still 30 watts.

On 6 m, UK holders of the Class A and B licences are now able to run 400 watts between 50 MHz and 51 MHz. Between 51 MHz and 52 MHz, they are still restricted to a power of 100 watts. Restrictions on ERP and antenna height which applied to the 50-52 MHz band have been removed. Maritime mobile operation on 6 m is now permitted in the UK, also.

Meanwhile, UK amateurs are now required to notify their local regulatory authority, the Radio Investigation Service (RIS), if they operate an unattended digital station. Operators have to notify their local RIS office on how to close down their station in an emergency.

W.I.A. examinations

The next exams to be held at W.I.A. N.S.W. Division will be on Sunday the 11th December 1994.

This will be your last chance to obtain your licence this year so don't miss out!

Applications are available from the Divisional Office by phoning 689-2417 between 12 pm and 1pm or leave a message on answering machine at other times.

Applications will close on Thursday 1st December 1994 at 2pm.

Jim Walker VK2XJW
Exam Co-Ordinator

Deceased estate

Mrs. Deal, phone 809-2831, has a lot of old radios, reels of tapes and host of other bits.

She needs help to dispose of the gear, call her on the weekends.

from Aub Topp VK2AXT
Librarian

Circuit wanted

A senior electronics enthusiast is attempting to restore a Philips R.F. signal generator, model TA101A, circa 1948, and would find a copy of a circuit or manual invaluable. As Philips in Holland cannot help, (and are somewhat amazed to learn of the continued existence of such a unit) could anyone with the appropriate information kindly contact Bob, VK2CAN, QTHR, who will be delighted to pass it on.

Bob, VK2CAN

WICEN News

This is supposed to be a quiet time for WICEN, but in the past we have had fire, flood, tempest, and earthquake around this time of the year; about all that is left is famine (unfortunately, we may already have this in the form of the drought) and plague (hopefully WICEN will not be involved in that one!), so do not be complacent; keep your equipment ready at all times for a sudden activation.

Members are reminded that the closing date for the Newsletter is this Wednesday.

For next month, there is the Blue Mountains meeting on Monday 5th December (and what appears to be a variety of Christmas parties by various Clubs). Also, WICEN has been requested to assist with the NSW Water Ski Association "Lion Island Classic", on Sunday 11th

December 1994. Along with the usual 2m requirements, long distance communications are required from Croppy Point to Laughtondale, and this will probably involve 80m. At least six personnel are required, from 0900 to 1430, and those interested are invited to contact David Ramsay VK2KLX.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to either VK2AAB or VK2OP BBS.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Bits and Bytes

Welcome to this segment of the Broadcast, resurrected after some years, in which we take an irregular and often irreverent look at the high-tech industry, and computers in particular.

Pentium chip doesn't add up -- well, divide, actually ...The hot news today is that so-called "power users" who bought the new "Pentium" chip have discovered that its calculations are not quite up to scratch, in fact, in certain cases they can be blatantly incorrect! These users, who perform heavy computational work such as ray-tracing and mathematical modelling, have discovered that if certain numbers are divided by each other then the Pentium chip reverts to single precision instead of the intended double precision.

In a concocted example which involves just a few operations, the result is "256" instead of "0", so this is hardly a harmless bug as some people are claiming! The problem seems to stem from the actual "bit pattern" by which floating point numbers are represented in computers, and certain numbers possess certain bit patterns which tickle whatever bug is on the Pentium's silicon.

In the meantime, Intel are denying that this is a major problem (the Herald notes that Intel officials were aware of this problem as far back as June, but continued to ship the defective chips re-gardless) and are demanding that their customers show evidence of an actual problem before they will replace the faulty chip (there must have been thousands, if not millions, of these expensive chips shipped). Listeners will be aware of other floating-point problems in Intel chips, although it is agreed that this is a

difficult thing to get right. Those with access to "USENET" can check out the stories over on "comp.sys.intel".

Spell Checker Goes Berserk; Editorial Maimed

Meanwhile, while still in the Land of the Free (where else do we hear whacky stories?), we note that a human being had suddenly turned into an infamous program loader. The following sentence was taken from Richard Cohen's column on page A19 of the November 15, 1994 Washington Post:

"GOP national chairman Haley Barbour instantly announced that New York City was no longer in the running for the Republican National Convention, and, more ominous, Sen. Alfonse D'Amato, the state's leading Republican and Pataki's Disk Operating System (DOS), said he would not seek revenge on Giuliani."

The only explanation we can come up with (other than Sen. D'Amato really being a copy of DOS) is that Cohen typed `doss' instead of `boss', and the spelling checker not only corrected it to DOS, but spelled the acronym out since it's the first appearance of it in a non-computer-related news story.

(Courtesy of Bob Bane, Global Science & Technology, Inc.)

The above information was abstracted from a variety of sources, including but not limited to "comp.risks" and "comp.sys.intel".

Contributed by Dave VK2ZTB

News briefs

It's been another quiet week for communications news, but those wh were interested on the recent High Court ruling regarding our defamation laws might like to know that the days of astronomically high damages awarded by juries will soon be a thing of the past. In future, it's the judges who will determine the damages to be awarded, and the amounts will be in line with those given to people who suffer physical injuries in accidents.

Pretty soon, it may once again be safe to criticise the actions of others, even on packet, without fear of legal reprisals from those with fragile egos. You'll still have to make sure what you say is true, so no making up stories now, otherwise we can all look forward to the day when the only lawyers on our band will be those with their own callsigns.

****

In Hong Kong, a struggling local TV station came under fire when it tried to grab the attention of potential advertisers. Their ad, a poster depicting Europe's most infamous war-time dictator, contained several dubious slogans, including (wait for it): "Thank goodness he couldn't advertise on ATV". Hmmmm...

****

Finally, an idea for anyone wishing to pick up one of the Institute's awards for technical innovation: CSIRO scientists have developed an antimethanogen, a compound which, when added to the feed of livestock, reduces the emission of greenhouse gases -- from both ends. Can anyone suggest a way this new substance might be applied to Amateur Radio (packet perhaps?).

****

"News briefs" looks at communications news items that appear in the mainstream media. Thanks this week go to "The Sydney Morning Herald". If your local or regional paper runs an item of interest to Radio Amateurs, why not send a clipping to the Divisional Office?

--Richard Murnane VK2SKY

IPS WEEKLY REPORT
----
18 NOVEMBER - 25 NOVEMBER

DATE OF ISSUE: 25 NOVEMBER 1994

INDICES:

DATE 18 19 20 21 22 23 24
10CM 80 78 79 78 76 78 79
A 5 17 23 6 6 3 (4 ESTIMATED)
T 36 33 5 28 45 10 37

SOLAR ACTIVITY WAS VERY LOW THROUGHOUT THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH WAS QUIET,OR MOSTLY QUIET 18TH, AND 21ST-24TH NOVEMBER, UNSETTLED ON 19TH, AND AT ACTIVE TO MINOR STORM LEVELS ON 20TH.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE MOSTLY NEAR NORMAL OR ENHANCED BY 15-30 PER CENT, EXCEPT FOR ENHANCEMENTS OF UP TO 50 PER CENT ON 18TH, AND DEPRESSED PERIODS OF UP TO 20TH-21ST NOVEMBER. SPORADIC E BLANKETING OCCURRED AT TIMES ON 20TH-22ND.

FORECAST (25 NOVEMBER - 01 DECEMBER)

SOLAR: VERY LOW

GEOMAGNETIC: ACTIVE TO MINOR STORM LEVELS EXPECTED DURING INTERVAL 25-27 NOV.

IONOSPHERIC: DEGRADED HF COMMS CONDITIONS EXPECTED 26-27 NOV. NEAR NORMAL ON OTHER DAYS.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

INVITATION

The Wireless Institute of Australia in conjunction with WAHRA, AAPRA, SPARC and other groups is pleased to announce that there will be a social function and get-together at the home QTH of Jo, VK2KAA, on Sunday 4 December 1994.

All Amateur Radio Operators are welcome to attend the barbeque which will commence at 5.00 pm.

The QTH is 59 Westbrook Avenue, Wahroonga.

The function will cost $10 per head and in the interests of catering, would you please contact Jo at the above address by Sunday 27th of November to indicate your intention to attend. Pre-payment for the function would be appreciated. Wives and friends are very welcome. A pool is available so bring your "Cossie". Please bring your own drinks.

Jo's telephone number is 489 4393. She can also be contacted on Packet via VK2AAB or on the Hornsby repeater, on 147.250 MHz.

We are looking forward to seeing you there to celebrate the passing of a turbulent but interesting year, 1994.

Club News

Radio Amateurs Old Timers Club

Members and friends of the Radio Amateurs Old Timers Club are reminded that the next series of broadcasts and call backs will take place on Monday December 5.

Times and frequencies will be as follows:

10 AM. MELBOURNE TIME (2300 ZULU)
145.700 MegaHertz FM
AND
7.060 Megahertz LSB
3650 MegaHertz LSB

11 AM. MELBOURNE TIME (0001 HOURS ZULU)
14.150 MegaHertz USB beaming NORTH
from Melbourne

12 NOON MELBOURNE TIME (0100 HOURS ZULU)
14.150 MegaHertz USB beaming WEST
from Melbourne

8.30 PM MELBOURNE TIME (0930 HOURS ZULU)
3650 MegaHertz For the benefit of members
of friends who, for whatever
reason are unable to hear any
of the morning transmissions.

Callbacks will follow all six transmissions.
News for inclusion in the club broadcasts will be welcomed by Club Secretary Arthur Evans VK3VQ or Allan Doble VK3AMD both of whom are OK in any call book.

From the St George Amateur Radio Society

The next meeting of the Society will be held at the usual venue, that is in the 1st Allawah Scout Hall, corner of Bellevue Pde. and Blakesley Rd., South Hurstville at 7.30 pm Wednesday evening the 7th of December 1994.

Due to illness the Society's guest speaker for its November meeting, David Pack VK2GIO was unable to attend. David is now well again and has indicated that he will be there to give his interesting talk and demonstration on Amateur Television at this December meeting. Members and interested visitors should not miss this opportunity to improve their knowledge of this emerging facet of our hobby.

The Society is pleased to advise interested amateurs that its repeater VK2RDX normally sited on Mt. Bindo and some time ago made unserviceable by repeated vandalism is now up and running on test at a temporary site in the Mt. Victoria area.

Unfortunately this new site is considerable lower in elevation than Mt. Bindo and even though some reports are good, many others indicate a loss in coverage and signal strength.

The Society intends to retain its site at Mt. Bindo in anticipation of talks with the Forestry Commission regarding improved security being fruitful. This could be some time away, but would mean that VK2RDX could be resited back to Bindo with a higher degree of safety than at present.

Visitors are always welcome to club meetings, coffee, tea and biscuits are provided and the members look forward to meeting those interested in attending.

frm Allan VK2XF Publicity Officer

AATC

The next general meeting of the A.A.T.C. Inc. is on December 11th, the second Sunday of the month at 1.00 pm at Amateur House, Parramatta.

The technical lecture on the day will be on (a) Power supplies and as a backup lecture (b) will be on gel-cel sealed lead acid batteries plus a demonstration of an 8 channel relay controlled output from your IBM computer so you can operate external devices via the keyboard.

The committee wishes to thank all those who attended the AATC-Christmas bar-b-que. Very special thanks to Dave and Judy catering

serices.

Calling all AATC - don't forget to put your thinking cap on for Wyong display next year - remeber it is only 12 plus weeks away. So start sorting out what items of equipment you wish to display. No flying leads with RCA or BNC plugs attached will be displayed.

Newsflash from the Publicity Oficer to be discussed next meeting. Item 1. - The 11kv power supplies and item 2. the 200 foot tower.

For more information about the A.A.T.C. listen to the net on Tuesday nights from the Liverpool area on 146.625 MHz - approx 19.30 hrs - or watch us on 1250 MHz from our Oaldale repeater any-time.

AATC Inc. Publicity Officer Bob Barnes

Packet meeting

The Packet Group of the Fisher's Ghost Amateur Radio Club are pleased to announce their 2nd get-together for System Operators, Service Providers and other interested parties.

The meeting is intended to be both inform each other on experiments and networking as well as to provide a forum for some form of network planning primarily in the area south of Campbelltown into the Southern Highlands.

At the meeting will be 9600 baud modems, kit TNC's as well as a 4800 baud Baycom style modem. There will also be information provided on Spread Spectrum Packet networks and high speed broadcast techniques.

The meeting is at the regular Fisher's Ghost Club venue of Campblltown High School in the room under the HF Yagi. It is on NEXT SUNDAY 5th December starting at 10:00 am. We intend to break at around noon so be sure to bring meat and drinks for a BBQ.

Once again the Packet meeting is next Sunday at Campbelltown High School at 10 am.

Darryl VK2TDS

Coming events

Now, a summary of upcoming events of interest to members and other Radio Amateurs ...

Solar '94 Conference & Exhibition. . . . . .Wednesday-Friday
Divisional exam applications close (contact Jim VK2XJW) Thursday
Manly-Warringah Radio Society Christmas Function . . . . .Friday
WAHRA, AAPRA, & SPARC Christmas Party. . . . . next Sunday
Summerland ARC Christmas party . . . . . next Sunday
Blue Mountains WICEN meeting . . . . . .5 December
Radio Amateurs Old Timers Club net . . . . . .5 December

Fishers Ghost Packet Group meeting . . . . . .5 December
St George ARC meeting. . . . . .7 December
Waverley ARC Christmas Dinner. . . . . 10 December
NSW Water Ski Ass'n Lion island Classic (VK2KLX) . . 11 December
Divisional exams at Parramatta . . . . . 11 December
Summerland ARC exams . . . . . 11 December
Australian Amateur TV Club general meeting . . . . . 11 December

Do you have an event you'd like publicised on the weekly broad-
cast? If so, then please send details to the Divisional Broadcast
Officer, Michael Corbin VK2PFQ, by phone on (02) 626-9288, or by
fax on (02) 626-6066.Items can also be forwarded to the Divisional
Office.

>From: PETER@EMBL-HAMBURG.DE (Peter Bendall)

said on the subject

>Subject: reciprocal permit

that he has problems. This is the same problems I encountered when I apllied for a US permit in 1989. I am Greek working for the EC, living in Brussels, married to an Irish with 2 kids of dual nationality.

As Europe is not a 'country' the US requires a ham license from the same country as nationality. In your case, get a license from the UK and you'll be fine.

Best, Peter

: is because of the reason for the morse requirement.

: Fairness has absolutely nothing to do with it? Would you give a blind
: person a driving license to be fair? The reason for CW is to allow someone to tell
: you to QSY on a shared band if causing interference. It is an international
: requirement. One can argue about speed, but until radio waves no longer propagate
: outside the USA you can't get rid of morse.
: Mike

Surprisingly few people seem to know of the reason why there is an ITU Morse requirement. It's quite sensible, once understood. Back in the distant past when these things were created, the various governments also had the incentive of a pool of registered, trained at their own expense, Morse operators ready to conscript.

The other users of those shared bands are now scheduled to stop using Morse. Inevitably, this will feed through into their recruitment and training programmes. In the forseeable future there won't be any commercial/government Morse operators to ask amateurs to QSY. Besides, CW facilities will likely be dropped in future equipment updates. All the reasons that a government sees for the Morse requirement will have gone away.

Morse will still be fun, and will still have its own particular mixture of strengths, but I think it's going to become voluntary.

On this net, US views seem to dominate, due to the population mix, I suppose. From what I read, there is a possibility that Morse compulsion might be retained in the US in response to demands from (some) amateurs. I don't suppose all countries would go the same way, so some of us are going to have to handle a sudden outbreak of freedom.

I wonder if we can do as good a job with rational argument and encouragement as bureacracy did with compulsion? I don't mean in just testing people, but in creating people who *USE* and enjoy the mode. My argument is that compulsion tests people, but only curiosity, encouragement and fun will make users out of those who pass the test.

Cheers
David GM4ZNX

I totally agree. A person has to decided if a vanity call sign is worth $150.00 (which I find very inexpensive for a lifetime fee).

I guess I'm lucky. I like my call sign of N9YYO, and probably will not change it when I upgrade. Although, I already got the nickname yo-yo from it :-).

Please can someone who has gained a USA reciprocal license help me with the following:

Given that I have a class A UK licence, CEPT1 etc. Is it possible to gain a US license and if so what class, how much and where from? Then when I visit I can use a US call.

I see there might be a problem as the USA code requirement is 13wpm whereas ours is 12 wpm.

This falls under prohibited transmissions as described in 97.113c.

"No station shall transmit communications in order to engage in
any form of broadcasting, nor to engage in any activity related
to program production or newsgathering for broadcasting purposes."

Cable can be considered a form of broadcasting for the purposes of
this rule.

>
>If the cable company were monitoring a transmission from one ham station to
>another, and if the cable company then sold the result to its subscribers,
>that would not be OK unless the participating stations authorized it -- right?

Hams do not own the content of their transmissions. It is legal for anyone
to monitor and/or divulge the contents to third parties, IE amateur is
specifically exempted from the Communications Act's secrecy rules. No
permission is required to retransmit amateur signals. The law treats them
the same as words shouted on a street corner.

>But if the participating stations authorize any receiving station to do as they
>please with the signal, and if no licensed ham is involved in the reception
>and retransmission by the cable company or otherwise employed by the cable
>company, then does this become a community service on the part of the hams
>with the cable company merely reporting this service -- in full?

It would be legal for the cable company, or anyone else, to receive
amateur transmissions and repeat them in any manner they choose. However,
the *amateurs* must be very careful that they are indeed involved in a
two way transmission, and are not transmitting with the *intent* of
broadcasting or being rebroadcast unless certain limited and special
conditions apply. Those special conditions don't apply here, and fore-
knowledge by the amateurs involved of the cable company's rebroadcast
could be viewed as intent to broadcast in defiance of 97.113c.

If you want to pass the game coverage to the cable company, use a
proper RPU (Remote PickUp) frequency with the proper commercial
license.

3219. 400W on 15m broke a telephone

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-28 15:32:17 UTC
From: ignacy@misz.animal.uiuc.edu
Message-ID: <3bct61$jg0@vixen.cso.uiuc.edu>
Source record: 256012

A GE communication center (speakerphone + answering machine) developed a short after I turned on my PA (400W) on 15m. Now the phone behaves as if the hook is always up. I looked into the printed board. It has four 1N4002 diodes for protection, which probably did not help because they were too slow. My dipole is in parallel with phone wires. Perhaps it is resonant on 15m.

Has any experienced damage to a piece of conusmer electronics by RF?

>.73 Malcolm, g1lys.

It's called an ICOM W21AT (or for you across the pond, a W21ET is the model with tone burst instead of CTCSS) which has a special "whisper mode" as an option. The mic is built into the bottom of the battery case. In whisper mode, you can talk just like on a phone using 2m/70cm crossband. Now, before you all call me a wimp, let me just say that I did not purchase this option. Instead, I stuck a big battery on the bottom, a big antenna on the top, and a speaker mic dangling from it to make it look like a real HT:-)

>up to?

I have a AEA MM-3 ('The Morse Machine') and it is great. It will do evertything you could possibly want an electronic keyer to do: it will simulate QSO's for practice, send random characters, can be hooked up to transmit from a computer (ugh!) and has every sort of weight and speed adjustment I've ever heard of. It's drawbacks are A. Cost (very pricey for a keyer) and B. Size: It's fairly large for a keyer, and wouldn't work out too well for taking on back-packing trips, etc for use with a QRP rig...

Cross-posted to: rec.radio.amateur.misc,rec.radio.swap,rec.radio.amateur.equipment,rec.antiques.radio+phono,rec.radio.shortwave,rec.radio.amateur.homebrew

I am getting back on the air after many years. I have a
Drake T4XB transmitter and Hammarlund HQ170AC-VHF receiver
that I had bought in the sixties. It is clear to me that
the Hammarlund has got to go. The question is:

1. Is it worth getting a used Drake R4B receiver from somewhere
or is equipment so much better these days that it is not
worth bothering?
2. What is the going rate to buy an R4B and where would
I get one?
3. What would the going rates be to sell the T4XB or HQ170
and where would I sell them? Are they collectors' items?
4. How have xmtrs & rcvrs improved in the last 25 years?
Sensitivity, selectivity, stability, features, programmability?

Note: I started when I was 9 yrs old so I am not as old as
this msg makes me seem.

Thanks,
Joe

Source record: 256022

Rob,

I am currently using a kenwood TH-78A, and I am rather happy with it. The FT-530 also seems to be a good radio, however; if I was going to go for a new dual band HT today, I would wait a couple of weeks. Yaesu is about to release their new FT-51. It is about the size of a pack of cigarettes, but not as thick. The same form factor as their current line of single band HT's. Alphanumeric display, onboard help, and all the standard goodies. I got to hold one of the prototypes a couple of weeks ago. Neat!

Keep in mind that no current production HT will be modifiable for 800 MHz, although that was common a couple of years ago. Dual band HT's with wide receive (most of them on the market are in this category) are susceptible to intermod. I recommend a second battery, an alkaline pack, and the appropriate drop-in quick charger as accessories. The reason for a second battery should be obvious, and the alkaline pack is usually cheep, and can be "recharged" at 7-11 or K-Mart. :-)

Having just recently passed my technician test and in the process of waiting for my license to arrive, I have been tasked by my dear wife to select an HT unit for her christmas gift to me this year. She has limited the expense to the $300-$350 range and I have tentively selected the following possibilities (includes best price found to date):

1. Kenwood
- TH28A 144mhz/440 receive $319.00
(This is the one I'm seriously leaning toward)
- TH22AT 144mhz $249.00

2. Icom
- P2AT 144mhz $349.95
- IC-T21A 144mhz $339.95

3. Standard
- C168A 144mhz $319.95
- C468A 440mhz $339.95

4. Yaesu
- FT-416 144mhz $339.95

Any and all information you might have concerning these (and others) units would be much appreciated - I guess I am looking for pros and cons as far as ease of operation, performance and reliability.

Thanks for the info on advance - you can either email me at

>if they do, i hope they don't forget to feed in some
>sidetone...like they do on telephones.

Actually, many current HT's do have the mic at the bottom and speaker at the top, but people still insist on talking into the speaker. My TH-78 has a small hole just below the keypad with the word "MIC" silk-screened next to it, guess what's inside. :-) I still hold the radio like a radio though to keep the antenna pointed away from my head. An HT transmits more power than most hand held cell phones.

Also related to this thread: Disneyland has a 2m amateur repeater, but the policy is to get clearance from "central comm" prior to brining an HT into the park. They have a lot of RF comms and controls and frown upon interference. In most places, being reasonable, and learning a few magic words (like, it's cleared through comm central) gets you through most situations. I even had an airport security person ask if my HT was a walkie-talkie or a cell phone the other day. Most don't consider the fact that it may NOT be a cell phone. I have never had a problem with airport security in the U.S., and I always have my HT hand inspected.

3234. HAM Frequency Allocations

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-28 19:37:46 UTC
From: thweatt@picard.cig.mot.com
Message-ID: <thweatt.786051466@picard>
Source record: 256027

I am interested in Special Frequency allocations in the 2Meter and
70cm, which can be used as emergency and a channel to reach someone
so that you can go simplex (a meet other ham freq.). Currently,
I do not believe channels like these exist; however, I know our friends
at ARRL could recommend such a proposal. I know CBs have the Channel
19 (?) reserved for emergencies, why can't we do the same???

Examples of where these freqs. would be helpful is as follows. The
second was a case that happened to me this weekend.

First- Emergency

A ham is traveling and his car stalls since his car's generator goes
out (could replace with gas run out or another other problem he might
have). Since, he has been using his battery, he now has limited power
resources. Since he is in an remote location(traveling), he does not know what
frequency to turn to. He only has limited power so he starts making calls
but before he can contact someone his battery goes dead. So here is another
poor ham who could not contact someone.

If a emergency freq. was specified then their might be other hams
who could monitor this channel in the event an emergencie arises.

Second - A Channel to meet other hams.

A traffic jam in a remote part of the highway. Can not hit any repeaters
(to far from a repeater). Would like to talk to a ham but don't know what
frequency could be used to talk simplex to a local ham. Sends out calls
on a number of frequencies but no response. Continues to scan other freqs.
but can seem to hear anyone clearly (during this time I am not transmitting).
My transmittion follows a hit or miss (always miss) approach. As time goes
on (about 1 hour) I hear someone talking about the traffic problem but can't
contact them.
I heard them on on freq, but they must have not been listening to this freq.
Found out later that the problem was road repair problems but would have
liked to find out sooner what the problem was, how I could avoid it,
where the problem was located, and where it got better (mile marker please).

So here are my two reasons for these special frequency allocations. Does
anyone have any suggestions or comments to this proposal. If hams seem
to think this suggestion, what do we need to do to implement it
or are our hands tied???

Thanks,
John Thweatt

3235. Need Yasue mic pin out info

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-28 19:43:48 UTC
From: tom_boza@ccm.hf.intel.com
Message-ID: <3bdbtk$3og@chnews.intel.com>
Source record: 256034
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I have acquired an older Yasue two meter transciever which has a seven pin
mic connector and I want to change it out with a standard 8 pin mic connector
so I can use my ICOM or Kenwood mic (I know ICOM and KWD are different).

Does anyone have the seven pin Yasue mic connector pin out info?

Which pin is:

MIC hot?
MIC GND?
PTT?
Freq UP?
Freq DN?
Audio out?
Chassis GND?

Thanks for your help,
WB7ASR...

3236. Has anyone else had problems installing LOGic 4.0 for Windows?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-28 19:46:21 UTC
From: djenkins@jetson.uh.edu
Message-ID: <3bdc2d$937@masala.cc.uh.edu>
Source record: 256026

I am trying to install LOGic 4.0 on a plain vanilla Windows 3.1 system.
DOS is version 3.1 (maybe that's the problem?) When LOGic setup wants
the second diskette, he always whines that he is "Unable to read" the
diskette. I have used the diskette successfully on another system,
and the self extracting file will extract OK if I invoke the
program on the diskette from the C prompt.

Has anyone else had this problem? If so, please respond offline.
TIA and 73.

>
>Is there a gateway to connect from the Internet to packet? Who do I
>contact for this access and is there any cost? Thanks for all help.
>Thanks and 73 de AA2TF

Its not really a gateway, but there is a packet node which is accessible via internet. You can telnet to 131.204.48.13 (bbs.k4ry.ampr.org) and it allows access to both packet and internet. If you want an account, you have to request one from the sysop. Send email to wb5msb@bbs.k4ry.ampr.org requesting a login or to packet wb5msb@k4ry.#cenal.al.usa.noam

Enjoy!

Source record: 256036

There is a petition floating around my local area that says that there is a group led by Madalyn Murray O'Hare who is trying to get the FCC to stop all religious related broadcasting. Does anybody anything about this? Is there an FCC source of info about this document (R.H. 2493)? Does this document number mean anything to any of you legal types out there?

The FCC is going to get blasted with tons of signed letters complaining about the possible enactment of R.H. 2493, whatever it is. Any info would be appreciated!

> I do not believe channels like these exist; however, I know our friends

Well the one I use on 2 meters is 146.520. It's the national simplex calling channel and there is one on 440 too. Unfortunately not enough people monitor simplex anymore. Repeaters are used and abused to much, and with the closed repeaters that are all to common nowadays simplex is great for traveling.
So if you are ever in Bakerstown give a holler on 146.520 simplex and I'm liable to be monitoring.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 28/2330Z NOVEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 28 NOVEMBER AND FORECAST FOR 29 NOVEMBER - 01 DECEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 80/20

GOES satellite data for 27 Nov
Daily Proton Fluence >1 MeV: No data
Daily Proton Fluence >10 MeV: No data
Daily Electron Fluence >2 MeV: No data
X-ray background: No data
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
29 Nov 30 Nov 01 Dec
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 29 Nov: 80/20
COMMENT: The solar region that showed growth appears to be declining.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 27 Nov
Learmonth 10 2223 3322
Fredericksburg 11 18
Planetary 15 25

Observed Kp for 27 Nov: 3445 5332
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
29 Nov 12 Unsettled
30 Nov 7 Quiet to unsettled
01 Dec 20 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 10 was issued on 28 November and is
current for interval 1-2 December. A slight increase in geomagnetic
activity is expected for today with a chance of an active period
during local night. Quiet levels are then expected, until 1 Dec when

unsettled-active levels are expected. Minor storming is probable
on 2 Dec. (Recurrence).

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
28 Nov normal fair-normal fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
29 Nov normal normal fair
30 Nov normal normal normal
01 Dec normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
28 Nov 19 near predicted monthly values

Predicted Monthly T-index for November: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
29 Nov 15 Near predicted monthly values
30 Nov 15 Near predicted monthly values
01 Dec 15 Near predicted monthly values
COMMENT: IPS HF Communications Warning 12 was issued on 28 November
and is current for interval 2-3 December. Depressed conditions of up
to 20-30% were observed at Townsville during daylight hours, yesterday.
MUFs were only slightly depressed at Sydney, very early in the UT day,
with enhancements during local night.

3247. Mod for Kenwood TM-742

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-28 23:32:05 UTC
From: charles@ardsley.business.uwo.ca
Message-ID: <charles.2.2EDA6875@ardsley.business.uwo.ca>
Source record: 256048

Wanted mods for TM - 742 transceiver.

For example - the software mod to get the extra 3 x 100 memories.

Also, all the good stuff well publicized for the 741.

Thanks

3248. Maritime Communications - Part 2

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-28 23:46:00 UTC
From: jeffrey@kahuna.tmc.edu
Message-ID: <D004oo.B3A@news.hawaii.edu>
Source record: 256041

Part 1 was well received so here's part 2 (of 7).

Subject: 500kc series

Copyright 1994
by Jeffrey Herman
All rights reserved.

Part 2. MF CW at NMO

Sitting adjacent to the HF CW position was a smaller room, enclosed on three sides in brick painted off-white. The fourth side was glass, including a sliding glass door, with a small sign glued on which simply said ``MF CW''. This little booth of modest appearance was well out of proportion with respect to the role MF CW had played in the history of maritime communications. Also, though I'm sure not by accident, the Chief's desk was positioned so he had a direct view of the MF CW booth. The Chief's position had a compliment of Collins rcvs, and one was ALWAYS set on 500kc. More often than not I'd get a glimpse of the duty Chief listening, with a gleam in his eye, to the evening traffic on 500.

Upon entering the MF position one was struck with the sight of the largest 24 hour clock known to mankind. It had the most unusual red markings on its face. Two red wedges, starting from the center and flaring outward covered, respectively, minutes :15 to :18, and minutes :45 to :48; these, of course, were blatant reminder to the op of the two worldwide silent periods (more one these later). In addition, each of the twelve five-second intervals around the perimeter had the first four seconds blocks marked in red with the last second left white: 4 seconds red, 1 second white, 4 seconds red, 1 second white, etc., around the entire circumference. Now, these markings were to aid the 500kc op in manually sending the distress auto alarm: key down 4 seconds, key up 1 second, key down 4 seconds, key up 1 second, etc., for one minute (more on the auto alarm later).

One's attention would next be drawn to two Collins 651S rcvrs mounted in the op's console. The top rcvr was locked on 500.000 kc and the bottom was usually a few hundred cps on either side of 500, say 499.500 kc. This, of course, prevented missing signals with whom our rcvrs were zero-beated with. The audio from these two receivers was fed into a 12 tract reel-to-reel tape recorder, as were all rcvrs and xmtrs at the station; one track was reserved for WWVH time signals. A second 12 track tape recorder acted as a back-up to the first. Reels were changed at the beginning of each new radio day (0000Z).

On a panel next to the two Collins rcvrs was a telephone-type rotary dial with 4 red lights above it. If digit 1 was dialed, the first red light would be lit, indicating our MF xmtr was on 500 kc in the A1 mode; if digit 2 was dialed, the second red light would be lit, indicating the xmtr was on 500 kc in the A2, or MCW (modulated CW), mode (more on A2 later); dialing digit 3 shifted the xmtr to 440 kc, in A1, where 440 kc was NMO's working frequency; dialing digit 4 shifted the xmtr to 512 kc, A1 (more on 512 later).

I'm not sure if this was against FCC or ITU regulations, but our 500kc xmtr was ALWAYS set to the A2/MCW mode when I was at the key; I hope there is a statute of limitations concerning this possible violation! I loved the musical notes A2 produced.

Note that our transmitter site was at least 5 miles away, on the 4000 ft peak of the Koolau Mountains. Thus we enjoyed full duplex transmission.

At a right angle to the op's desk was a typewriter containing the MF CW radio log. During radioman school we were instructed to attempt to log every signal were heard on 500 (an impossible feat), but at worst, make an entry every 5 minutes (ITU regs!). If no signals were heard within a 5 minute period (which would never happen at night) then one would enter:

NO SIGS 500 2308Z
NO SIGS 500 2313Z
BEGIN SILENT PERIOD 500 2315Z
END SILENT PERIOD 500 2318Z
KPH KPH KPH DE WNKL WNKL AMVER 425 K / WNKL DE
KPH R UP / UP / EE / EE 500 2320Z
NO SIGS 500 2325Z

Thus, what ever we heard would be typed directly into the log. At a right angle to the log typewriter was a second typewriter which was used to copy traffic from ships to NMO: OBS, AMVERS Dead Head Medicos (medical reports handled free-of-charge), and other non-commercial traffic. By U.S. law, Coast Guard stations cannot handle commercial traffic, for that would take revenue away from the commercial stations.

Sitting on the ops desk was a Vibroplex chrome-plated bug, and a cheap straight key screwed onto a thin sheet of plexiglass. I, of course, only used the straight key.

Shifts at NMO ran like this:
12 hours on
12 hours off
12 hours on
72 hours off.
The day watch started at 0700 and ended at 1900 (local); night watch ran from 1900 to 0700 the next morning <yawn...>

During my off hours I rebuilt an older wooden sailboat that doubled as my home; that enabled me to collect money from the CG for off-base housing... What a life, huh?

No one on my shift had any particular love for the 500 position (``what fools!'' I thought), so, even though we were supposed to rotate positions every 3 hours, I volunteered to remain at the 500 position for the full 12 hours shift (especially during the night watches); I loved it!

It was from this modest console that I would spend the next three years of my life. The things that I copied would, at times, amaze me, cause me laugh so hard I would fall out of my chair, or cause me to break down weeping. To this day I cannot forget the ship's op whom I was working a distress with - how he stayed at his key while his ship broke up in heavy seas - how his transmitter emitted a scream at the moment the ocean flooded his radio room shorting the batteries and radios...

End of Part 2.

Jeff NH6IL

3249. Emergency Frequencies

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-28 23:50:43 UTC

Message-ID: <MORAWSKI.94Nov28185043@starbase.azrael.mitre.org>
Source record: 256044

I've been following the thread regarding the lack of a
standardized emergency calling frequency.

I suggest that you all read "A Wilderness VHF/UHF FM
Protocol," in the May 1994 issue of QST, pp. 103-104. It outlines
an emergency protocol which is currently in a trial period.
If successful, I suspect that it will be adopted by the ARRL as
an officially recommended procedure.

Regards,

Paul Morawski, AA3DD

>of interest to me. I'm thinking of the Icom 21WAT... What others should
>I be looking at????

I'm in the same market. The Standard C528A seems to be selling for around the price you mention. Right now I'm trying to compare it with the Yaesu FT-530, which is about $100 more, but can find little information about either HT. Just from the ads, I can see the Yaesu has a lighted keypad and a cleaner looking display, but without seeing each in person, it's hard to evaluate.

Cue feedback from owners...

Be advised that this rulemaking (RM) petition was dismissed in the 1970's (20 years ago). Don't ask me why rumors about it keep resurfacing, but they seem to pop up around the religious holidays (xmas and easter).

Your local FCC office can send you a news release that discusses the matter in some detail, but basically the consitution and the Communications Act preclude the FCC "censoring" free speech in this manner. They have received several MILLION pieces of mail over the years about it.

It is long dead and decaying. Forget about it.

: : I am very troubled by the proposed Vanity call fee. Recently, a member of
: : our ARRL representation for SE NY told us at a club meeting that the ARRL
: : supports the proposed lifetime fee of $150.00. He also told us that the
: : actual processing cost is only $7.00! The OMB sets the fee and when asked
: : in a letter to the ARRL, Steve Ford replied that the ARRL supports this
: : fee for a number of rather weak reasons. I thought that the ARRL
: : represents our interests! How do others feel about this high fee and the
: : ARRL's position?
: : 73 de AA2TF

As a "lifetime" fee of $150 I don't see anything wrong. I'll
assume your dissatisfaction is with the cost (what do you
think it should be). Frankly, any argument as to the cost of
processing be very little in comparison to the fee is no
different than the fees paid for vanity auto license plates.

Bottom line, if you want a vanity call, you pay the frieght.
Use of a vanity call contibutes nothing to the overall goals
and value of amateur radio, so I see nothing wrong with making
vanity calls a "profit center" to support FCC activity (hopefully
the fees will be devoted to amateur radio enforcement, etc.)

Message-ID: <9411282205.ZM14722@SALCIUS2>
Source record: 256053

My favorite keyer: CMOS SUPER KEYER II (partial kit for $50) from Idiom Press

* Programmable everything, such as speed, weight, sidetone frequency, keying compensation, message queue, incrementing contest serial number, etc.

* Speed knob covers only a 3:1 range, you program the range.

* Mistake-tolerant message loading in "character" mode.

* Low parts count because the "logic" is the microprocessor's internal PROM.

* Almost zero current drain. Works for years on 3 penlight batteries.

* Package is as beautiful as you want to make it since you supply your own enclosure, switches, etc.

* Excellent instruction manual.

* Robust operation - No Glitches!

* Refer to any recent ARRL Handbook for details.

p.s. I replaced the rubber feet of my paddle with four 1" x 1" foam rubber pads. A minute or two after repositioning on a clean smooth surface, the foam adheres like suction cups to my table top. I've used it for more than ten years--the rubber pads still "grab" the table top and withstand several pounds of lateral force before unsticking. It makes my el-cheapo "Ham Key" paddle seem like a "Jones Key". Not every rubber compound adheres like this, but if you find the right kind of rubber pads (very soft and somewhat sticky to the touch) you will be amazed at the results!

I have a www page that may be of interest to the amateur community.

I have a few interesting links in my /ham/ham.html page. I also have one link to another ham 7J1AJH/AI8A (I believe that is the proper call), a ham bbs (WB3FFV) as well as some links to get solar activity levels, and nasa news. I also have two different call books pointed to.

to run just the ham page use the URL of:
http://gagme.wwa.com/~phantom/ham/ham.html/
to see the whole lot of junk (government and educational links IE: FBI CIA NASA, and others) use teh following URL:
http://gagme.wwa.com/~phantom/

If you have a page that you wish me to point to (eg: your own page)
send me email phantom@gagme.wwa.com

NOW maybe we can start having all hams pointing at each other, and have some cool links in this global network.

>GL and 73 Gerry K8EF@W8CQK.OH.USA.NA

I'm working on my 13wpm code and haven't been worrying about 100% copy. I think
the look and listen drills are worthwhile as well. I have used a combination of
watching the computer spit off a QSO while listening. I've also been copying
QSO's blindly (not watching the screen) to build the speed. Eventually something
clicks and you'll go from feeling rushed at 13wpm to getting comfortable and
relaxed with it.

>the Hammarlund has got to go. The question is:

Our group's focus is on home entertainment items---acoustic phonos and
old radios, primarily from the 1920-50 period. While there is some
discussion of tube-type "boatanchor" communications radios, it is
generally of older general-coverage sets. The mail list
boatanchors@gnu.ai.mit.edu is a good place to get information on things
like HQ-170's and old transmitters.
>
>1. Is it worth getting a used Drake R4B receiver from somewhere
> or is equipment so much better these days that it is not
>worth bothering?
Most of us would rather have a Philco chairside, an old Atwater Kent,
or a Hallicraftrs SX-17. I've got a postwar Magnavox, an HQ-150, and
an RME-45, all working fine, and wouldn't trade any of them for a Drake.
Can't get the French and Canadian (french) shortwave stations with a
Drake.

>2. What is the going rate to buy an R4B and where would
> I get one?
Not very likely here. A Drake is a ham receiver, not home
entertainment.

>3. What would the going rates be to sell the T4XB or HQ170
> and where would I sell them? Are they collectors' items?
Once again, this is not an amateur radio newsgroup.

>4. How have xmtrs & rcvrs improved in the last 25 years?
> Sensitivity, selectivity, stability, features, programmability?

Define "improved." A lot of our readers think that a Victor
Orthophonic is superior to an electric phonograph.
>

These questions are about getting active in ham radio, and there are newsgroups that are directed toward that purpose, which this item was posted to. It shouldn't have been crossposted here. This is an antiques group, created to take discussion of home entertainment stuff out of rec.antiques. There are several amateur radio groups, and we don't attempt to fill any gaps in them in this group---if, indeed, there are any.

Getting to 70% should suffice. The first time I heard 13wpm was the day I took
the test. I was only up to 11wpm on test day, and I passed the test. So if I
were you, I wouldn't worry about 100% copy.

>Has anyone else had trouble trying to understand non English speakers?
>Would like to hear about this. Some say this problem is increasing.
> Sincerely, Wes Arnold Email ok also Wesarnold@aol.com

I mostly have trouble understanding "non English speakers" when they are not speaking English or German (the only two languages I know) :-)

I sometimes have trouble understanding "English as a 2nd (3rd, 4th) language" speakers when they speak English. But I don't complain because their English is usually a lot better than my Italian, Russian, Japanese, Spanish, etc.

Most English-speaking hams don't think about how LUCKY they are that 90% of DX contacts are conducted in their native language.

73 de Wayne Estes WD5FFH wayne@csg.mot.com

3269. Having trouble with non English speakers?

From: pve@dg13.cec.BE
Message-ID: <2EDB48C8@smtp>
Source record: 256072

I am sure you are not trying to imply that 'you' are better than non-english speakers, are you? No I dont think so. What you are refering to is probably the fact the more people are on the air these days from more non-english speaking countries thereby making you think that the ham bands are being taken over by non-English people.
Well, when you realize that English speakers are a minority (US, part of Canada, UK, Ireland (!), Australia, Nigeria and some other parts) compared to Chinese and the Hispanic world it may make you consider about languages found on ham radio.
If you are talking on ham radio with non-english people, remember the golden rule: speak simple English. Dont say "So, howya doing today over there in ....," rather say "Me in America OK. YOU how OM." and so on.
Peter, KC1QF (no I am not English...)

Hello all from snowy Iowa!
I am wondering if anyone has purchased or has had the chance to use the new Radio Shack 2m PA offered in the new catalog. It claims to have a helical front-end to reduce intermod. Does this mean that if I use this amp with all my HT's, they will all have the same intermod rejection as my HTX-202? That would be nice!
Any info on this unit would be greatly appreciated.

Try the Smithsonian |-)
2~ Just kidding welcome back. About 15 years ago everything
changed to synthesised rigs. You can get a used one for quite cheap
from 10yrs ago that does 90% of what a new one does (IMHO). I was
out of it for 20yrs too. Things changed a lot in the 70;s.

3274. Diamond Antennas

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-29 16:23:08 UTC
From: Steve.Hideg.1@nd.edu
Message-ID: <Steve.Hideg.1-2911941123080001@hideg.cc.nd.edu>
Source record: 256073
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

Hello.

Perhaps this has already been discussed in this group, but I heard some disturbing news about Diamond antennas on a net last night.

Now, I have experienced major problems with the X-500. We had one atop a 3-story building as a UHF repeater antenna. We had major problems when it filled with water.

I also have an X-500HNA, which is supposed to be a heavy-duty version. It also has ports on the bottom plate to aid in draining water.

What I heard on this net is that the Diamond asked a fellow if he has alot of snow and ice storms at his site. He answered, "Yes, I'm in the Midwest." The Diamond rep told him that none of their base-station antennas are suitable for such an environment.

Nowhere in their literature (promotional brochures, manuals, etc.) did they mention this.

Has anyone out there gotten the same BS from a Diamond rep?

Anyone out there have any experience with the X500-HNA? I'm planning to use it for a repeater on top of a 12-story building. Should I bother? Or should I figure out how to haul my Super StationMaster up the side of this building?

Thank you for your help.

Hi Wes, It has been pointed out here on numerous occasions that CW doesn't have that problem. I pleaded "QRM" on voice one night and we switched to CW when I couldn't understand the other ham's accented English. 'Course, he was having an equal amount of trouble with my Texan accent. Funny thing, it was a QSO with an Australian ham. :-)

I've had several people ask me to forward any mods for the 5718 to them.
I received this from Rodger, so I'll just post it for everyone who
needs it.

Dan, KD4VGM

>From: Rodger Rosebaum <rodger@andes.pnw.net>
>Date: Fri, 18 Nov 1994 20:45:58 -0800
>Subject: Mods for C5718

Hi Dan,
I just got my 5718 a few days ago and I have done the only mod I am
aware of which I found in a book, "Radio/Tech Modifications", published
by Artsci. The mod consists of removing a surface mount resistor.

Take of the top cover and turn the radio so that the front panel is
facing away from you. Look down at the vertical pc board which is rearmost
behind the front panel. You will see three surface mount resistors, the little
rectangular ones, in a vertical row on the far right of that pc board as you
face it from behind. That is, the parts would be on the far left if you were
looking at the radio from the front, but they are on the right looking at
the board from the back. Remove the bottom one of the three surface mount
resistors. You would have to take the radio apart more than you have so far
in order to unsolder the part, so I just took my pocket knife and pried the
resistor off the board.

After the mod, you get 800 MHz receive on the UHF band (press the
U-U/V-V button until you see the 800 MHz range). You also get extended
xmit range, of course. It's a great radio; all my hand helds are Standard,
also.

If you have any questions at all about the procedure, don't hesitate
to email me.

Are you advocating that the FCC allocate specific channels for
these purposes?

Let's consider your examples and see what the current problems are.

>Examples of where these freqs. would be helpful is as follows. The
>second was a case that happened to me this weekend.
>
>First- Emergency
>
>A ham is traveling and his car stalls since his car's generator goes
[...]
>
>If a emergency freq. was specified then their might be other hams
>who could monitor this channel in the event an emergencie arises.
>
How would this be implemented?

If we allocate a repeater pair for emergency use only, then someone
has to be willing to put up a repeater that is rarely used.
In remote areas there might not be enough support for this.
Also, repeaters need some usage to keep them in good operating condition.
If a repeater was only used for emergencies, then the only time
you would find out that something went wrong would be when someone
has an emergency and really needed it.

If a simplex channel is allocated then the problem is getting
someone to monitor the channel. We already have a recognized
National Simplex Channel on each VHF band (146.520 MHz on 2m).
If 146.52 isn't being monitored, why not? Would there be anyone
to monitor another channel?

>
>Second - A Channel to meet other hams.
>
>
>A traffic jam in a remote part of the highway. Can not hit any repeaters

[...]

146.520 MHz has been designated as the National Simplex Frequency
for 2 meters in the ARRL bandplan and has been recognized by
various band planning groups and 2m users for twenty years or more.
Did you try that one?

>
>So here are my two reasons for these special frequency allocations. Does
>anyone have any suggestions or comments to this proposal. If hams seem
>to think this suggestion, what do we need to do to implement it
>or are our hands tied???
>

If you think the FCC should make such an allocation, you can petition
them for the rules change.

Some radio services (e.g., marine) have calling and emergency channels.
QST used to publish suggested HF frequencies for such use several years ago.
It never seemed to catch on.

The main problems that you have to consider are: who is going to
set up and maintain the equipment? Who is going to monitor the
channel? We already have 52.

Gary

This is _exactly_ what you find in a statement reporting the settlement of
a suit--no substance. The lawyers dictate what information is released.
Lawsuits do not encourage free exchange of information with the public.

In other words, ARRL and LARC appear to have mutually agreed, as part of
the settlement, that they will say what is in the official statement, and
nothing else.

While chasing DX on 75m last night, I heard a W7/PA0xxx trying to get that alphabet soup across to DJ6OT/6Y5. DJ was having problems with the 0 in PA's call. I don't think either op had English as an origional language, so 'zero' was sounding like 'cirra' or 'sierra'. Someone finally relayed the calls back and forth, and we all got Jamaica in the logs.

Long calls for DX stations ;-)

3290. Dialing NBS from Instant Track

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-29 19:38:27 UTC
From: Wayne_Estes@csg.mot.com
Message-ID: <9411291338.ZM27108@SALCIUS2>
Source record: 255939

I am having trouble using the Instant Track "Update Time" feature that dials the National Bureau of Standards.

My modem is on COM3, IRQ5, but I can't get Instant Track to dial the NBS when I set "port=3" on the NBSCOM.INI file.

Stangely, when I set "port=2", Instant Track does dial the NBS, but I only hear about 2 seconds of data, then silence. No text appears on the screen.

Here are the contents of my NBSCOM.INI file:

```
dial=ATDT1-303-494-4794
hangup=ATH
maxtime=45
port=3
baud=2400
```

Any ideas?
Does Instant Track support com ports higher than 2?

: 2: Can an American licensee operate in Canada without any
: special form etc.

: Thanks,

: Jeff Copeland -- 2 more weeks till I take the test

Well Jeff, there are several levels of license:

1. Basic: No code required, just a 60% or better on the written. This gives you priviledges on freqs above 30 MHz.

2. 5 WPM endorsement: what it sounds like. gives you 160 & 80 Metres.

3. 12 WPM endorsement: Ditto. Gives you all bands

4. Advanced: requires 60 % or better on a tougher technical written exam. This allows you to build your own equipment and sponsor repeaters etc. You must also hold this level of license in order to be a Delegated Examiner (to be able to administer exams in Canada).

Finally, the U.S. and Canada have reciprocal OPERATING agreements. A ham from either country may legally operate in the other country but must follow any/all rules that differ from their home country's rules (max power output etc.). Note that this does not mean that because you hold a license in either country that you can exchange it for an equivalent level in the other...there is NO reciprocal licensing agreement.

3297. Is Somebody Selling Ham Mailing Lists?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-29 20:02:13 UTC
From: dearnshaw@worldbank.org
Message-ID: <1994Nov29.173034.18114@worldbank.org>
Source record: 255930

I'm curious, and a little more than perplexed. I have recently changed address, and I have suddenly started to receive complimentary copies of a Ham Trader magazine in the mail. The mail is addressed correctly, including my new address and my callsign. When I called the publishing company and asked where they got my name and address from, they initially claimed it was the Callbook, or the FCC listings - wrong! I haven't notified the FCC of my change of address yet. In fact, the only radio-related organizations that I've notified is the ARRL, the RSGB and Worldradio Magazine. I also updated the local packetcluster with my new address.

I'm not acusing the League (or anyone else) of selling the information, because I simply don't know where the information came from. Has anybody else suddenly started receiving copies of this publication, and if so, do they know how the publishers got their name and address?

Granted, this is not an earth-shattering disaster, but it is another example of personal privacy being eroded away.

-- Darrell (NR3Y)

ps. For peace of mind, it would be nice if the ARRL could reassure its membership that it does not (or will not) get into the insidious practice of selling its membership list.

Gerry,

I saw a similar query in my local newspaper last week. The newspaper "hotline" column contacted the FCC, who told them it was a bogus story that has been circulating for years. I think it's safe to say you can pay no attention to this one.

Many times the post office kindly informs senders of the change of address.
Perhaps some other magazine or mailing alerted a list maker of the change
and they were able to cross reference your name and update the Ham Trader
list. It's amazing what SMOP (smiple matter of programming) can accomplish.
I've gotten leters back from an expired forwarding with the new, correct
address on a label. All I had to do was put another stamp on the letter,
cross off the old address and drop it back into the system.

You mention the ARRL as a possible source, what about Worldradio and the RSGB?
Both might be willing to update mailing lists for extra change.

But the real source could easily be the good o' USPS.

TELEPHONE INTERFERENCE SURVEY

May 2, 1994

Prepared by
Field Operations Bureau
Federal Communications Commission

Telephone Interference Survey

Background

The Federal Communications Commission (FCC) receives 25,000 complaints per year from individuals who are unable to use their telephones because nearby radio stations interfere with the proper operation of the telephones. Whenever the radio stations are on the air, the telephones pick up the stations' transmissions which then override any ongoing telephone conversation.

For about three years field offices have submitted narrative reports indicating that interference to telephones is an increasing problem among consumers. Because of those reports, FOB began a detailed sampling of calls and letters. The sampling is an actual count of specific complaints and inquiries, conducted one week each month by all offices. This sample is the basis of our count of 25,000 telephone interference complaints per year and is the most accurate measure of compliant categories now available.

The FCC's Field Operations Bureau (FOB) has done an informal survey to obtain information about telephone interference such as:

-which telephones are affected
-what type transmitting stations are involved
-the power levels at which the stations were transmitting
-whether commonly available filters would be effective in eliminating the interference
-whether specially designed telephones would be effective in eliminating the interference

In setting forth the results of its informal survey, FOB emphasizes that, because this survey is based on a random sample, it cannot be claimed that identical results would be derived under scientific surveying and testing, nor should the results be construed as FCC endorsement or criticism of any particular manufacturer's product. Rather, FOB believes these results to be a good "first look" at the problem.

Procedure

Thirty-five FCC field offices across the country participated in the survey. Each office was to choose three recent complaints of telephone interference on a random basis, and then to investigate the complaints.

At the transmitting station FOB staff would determine the type of station (i.e., amateur, citizens band, broadcast, etc.), measure the station power, and obtain information on antenna height, antenna gain, and distance from the complainant.

At the complainant's location, FOB would disconnect all telephones, take them to a chosen telephone jack, and plug them in one at a time while the station was transmitting. FOB would then record which telephones received interference and which did not.

FOB also tested the effectiveness of several commercially-available telephone filters, connecting the filters to telephones which were receiving interference while the radio station was transmitting.

Finally, FOB connected "interference free" telephones to the telephone jacks and observed whether these telephones received interference. "Interference free" telephones are those which the manufacturer claims to be immune from interference.

Findings

Types of Transmitting Stations

FOB inspected 108 transmitting stations which were involved in the telephone interference complaints, as follows:

Citizens Band 47
Amateur 27
AM Broadcast 23
FM Broadcast 10
International Broadcast . 1

Power Levels

The power levels of the radio transmitting stations varied from two watts to half a million watts. One-third of the transmitting stations operated with less than ten watts, and one-third of the interfering stations were broadcast stations using between 3000 and half a million watts. Attachment 1 lists the power levels of the transmitting stations.

Types of Telephones

FOB tested 241 telephones found in the complainants' residences. Of the 241 telephones 68 percent received interference. Attachment 2 lists the telephones tested. FOB did not observe interference on 32 percent of the telephones it tested. These telephones are listed in Attachment 3.

Types of Filters

FOB tested the effectiveness of the AT&T Z100B1 filter on 138 telephones receiving interference. After connecting the filter to the telephones, 62 percent of the telephones continued to receive interference. The filter did eliminate interference on 38 percent of the telephones. A number of other filters were also tested on 82 telephones receiving interference. As a group these filters eliminated interference on 29 percent of the telephones. They did not eliminate interference on 71 percent of the telephones. Attachment 4 lists the filters which eliminated the interference.

"Interference Free" Telephones

FOB tested "interference free" telephones at 52 locations where the individuals were receiving interference to their telephones. The "interference free" telephones eliminated interference at 96 percent of the locations.

Conclusions

The transmitting stations most likely to cause telephone interference are citizens band, amateur, and broadcast stations. Citizens band stations accounted for half the telephone interference cases. Amateur stations and broadcast stations accounted for the other half.

The power levels used by the radio transmitting station did not appear to be a significant factor in causing telephone interference. Power levels of 10 watts or less caused telephone interference in a third of the cases.

A large portion of the residential telephones appeared to be susceptible to interference from nearby radio transmitting stations. Although some telephones did not receive interference, the limited nature of the testing performed in conjunction with this survey would not support the conclusion that they would always reject interference.

Filters cannot be relied upon to eliminate telephone interference: in two out of three cases in the test sample, they did not work. Manufacturers can, however, design telephones to be interference-free. The "interference free" telephones were immune from interference virtually all of the time.

A Final Note

Notwithstanding the 25,000 reports of telephone interference the FCC receives annually, it is FOB's experience that, as large as this number is, it probably represents only a fraction of the actual instances in which this interference occurs. Given the enormous numbers of instances in which this type of interference is experienced by consumers, it is our hope that this survey, notwithstanding its informality, will serve as a catalyst for affected parties to productively address and resolve this problem. As always, FOB remains ready to assist in that effort.

The filters listed here deserve further study. During the project the FCC found that these filters eliminated interference when tried in individual cases. However, the FCC did not test any of these filters in a sufficient number of cases, and it cannot conclude whether any of these filters would be effective in eliminating interference most of the time.

Greetings! I have 2 a2090as that have been sitting on the shelf for at least three years. These are old zorro2 autobooting scsi/mfm hard drive controllers. I doubt I have the manual, but have at least a copy of the software. If you want a functional and cheap controller for an mfm or scsi drive, these will do the job...you can have both for $10 plus shipping or trade for some bizarre trinket...

Hi Bob,
There are no stupid questions, as you know, oterwise you would not be
where you are.
With your privileges e.m. VHF/UHF only way to cover this distance is
by repeater.(a GOOD one).
Other two possiabilities are via satelite and via EME (Moon bounce)

I've bought four IC-W2A over the years and have been very pleased with them. They can act like scanning receivers with frequency lockout capacity, including the 800Mhz band, and can be modified to both receive and transmit out of band.

In clearing out my Grandfather's house (he became a silent key before I was born, but my uncle was living there), I came across all of his old equipment. I am looking for any information at all about this equipment: Schematics, Manuals, Service Advice, even stories about chasing DX. Here is the equipment:

Elmac AF67 Mobile Transmitter
Elmac 110V AC Power Supply for AF67
Morrow 5BR-1 Mobile Receiver
Swan SS200 SSB Transmitter
Swan PS20 Power Suppy for SS200

The Swan works, but I don't know about anything else. Also, if anyone has any companion pieces to any of the above equipment, I would be interested in purchasing/swapping. The Elmac was my father's, and I would love to give him the companion receiver (if there was one) for Christmas. Please let me know. Any information would be appreciated.

I bought one. Works great. pre-amp works well and its pumps
30 watts as advertised. Cant tell you about intermod since
I use mine with my HTX-202.

I think its worth the 119.00 dollars.

Later.

3318. Contact with Pirate--How to Deal with?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-29 23:06:43 UTC
From: Charles.R.Hohenstein.1@nd.edu
Message-ID: <Charles.R.Hohenstein.1-2911941809240001@mac51.debartolo.lab.nd.edu>
Source record: 255963

I was excited to work Alaska on 40 meter CW, but less excited to hear from the callsign holder that someone else has been using his call, and that he has received several requests for QSLs confirming spurious contacts with "Jim."

What can be done about this, without getting the rightful owner of the call into difficulty? That is why I hesitate to give the call in this post. On the other hand, I hate to do nothing, while someone continues to hand out phony Alaska contacts. Is this the sort of thing which ARRL observers might help to deal with?

Incidentally, this guy's CW was good. So much for the CW requirement screening out the undesireables . . .

Thanks for any suggestions.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 29/2330Z NOVEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 29 NOVEMBER AND FORECAST FOR 30 NOVEMBER - 02 DECEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 80/20

GOES satellite data for 28 Nov
Daily Proton Fluence >1 MeV: No data
Daily Proton Fluence >10 MeV: No data
Daily Electron Fluence >2 MeV: No data
X-ray background: No data
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
30 Nov 01 Dec 02 Dec
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 30 Nov: 80/20

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 28 Nov
Learmonth 8 2212 3223
Fredericksburg 10 12
Planetary 7 11

Observed Kp for 28 Nov: 2244 3221
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
30 Nov 7 Quiet to unsettled
01 Dec 20 Unsettled to active
02 Dec 20 Active
COMMENT: IPS Geomagnetic Warning 10 was issued on 28 November and is
current for interval 1-2 December. Unsettled-active levels are
expected on Dec 1. Minor storming is expected during local night on
2 Dec. (Recurrence).

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
29 Nov normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
30 Nov normal normal normal
01 Dec normal fair poor
02 Dec normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
29 Nov 24 slightly above predicted monthly values

Predicted Monthly T-index for November: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
30 Nov 20 Near predicted monthly values
01 Dec 15 Near predicted monthly values
02 Dec 0 About 10% below predicted monthly values
COMMENT: IPS HF Communications Warning 12 was issued on 28 November
and is current for interval 2-3 December.

>that it may NOT be a cell phone. I have never had a problem with airport
>security in the U.S., and I always have my HT hand inspected.
>
Really, I didn't know this. When I was at Disneyland last summer, I took
my HT in with me. No hassles anywhere. Of course, I didn't have much
oportunity to use it while I was in. (I'm the only ham in the family)

In fact I wore my HT everywhere I went when I was travelling during the summer,
and only once did somebody point at my HT and say that I can't use it...and
that was getting onto the airplane at the start of my trip.

ICOM has come out with a HT with mike at the bottom of the battery and
with a dual bander you can talk to another dual bander full duplex. They
call it the 'Whisper Mode' or something like that.

3324. Re: callsign.cs.buffalo.edu server

Newsgroup: rec.radio.amateur.misc

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB4IUX, WB6GFJ, N6BIS, N8AC, DL7VEE & DXNL and ZL1AMO for the following DX information.

8P, BARBADOS. Marian, KB9EKO, and Myron, K9JJR, will be active from here starting next weekend through December 12th. Their activities on the bands were not mentioned, but their callsigns will be 8P9CT and 8P9DC, respectively.

8Q, MALDIVES ISLAND. NODXA member Tom, DL7UTM (aka H44XO, 3D2XO, T21XO and Y31XO) will be active as 8Q7XO during the holidays (presuming around Christmas and New Years).

9H, MALTA. NODXA members Birgit, DL7VTZ, and Holgert, DL7VTM, will be active from here (possibly Gozo Island) for two weeks at the end of March 1995. They plan to be active in a CQWW contest. Both were active earlier in the year from Zambia as 9I2M and 9I2Z.

BV, TAIWAN. (Update and reminder!) Tom, WB4IUX, has announced over the weekend that he will definitely be active (as BV/WB4IUX) November 29th, starting around 1215z. He will be operating from Tony's (BV2TA) shack. During the three day stay, his primary frequenies will be 3508 to 3512 kHz (depending on local QRM). If 80 meters is closed to North America, he will try 7008-7012 kHz. On his second day, he will try to operate on 160 meters. On his final day (November 30th), Tom will be active on 20 meters SSB (around 14200 kHz) during the U.S.'s evening hours.

VI0, ANTARCTICA. Eddie, VK4EET, is currently active and operating under the callsign VI0ANT. It is expected that he is going to be there through the Antarctica summer (March 1995). He plans to be on the air everyday from 1130z until 1630z on weekdays and whenever the bands are open on weekends (especially during DX contests). His preferred mode is CW, then SSB, but he can also work RTTY/AMTOR on request. He will be active on all HF bands but mainly the low bands. Suggested frequencies:

CW - 3502, 7005, 14005, 21005 and SSB - 3798, 7070, 14190, 21295 kHz. QSL via home call VK4EET. The XYL, Mina (VK4BMD), will handle urgent QSL requests, with verification from Eddie. Bureau cards will be answered on his return to VK4 in April 1995. Other operators are also active from here using the VK0 prefix. Phil, VK4FPS, is active as VK0FPS on SSB and all digital modes. QSL to VK3MA. He will be here until December 1995. Lances, VK7ERZ, is active as VK0ERZ. He is occasionally active on SSB and prefers to ragchew. He will be active until March 1995.

ZL7, CHATHAM ISLAND. Well known DXer Ron, ZL1AMO, informed OPDX that he will be active from here, December 10-20th. Ron usually likes operating on CW mainly on the low bands and the WARC bands but states he will also be active on SSB and RTTY.

THE FOURTH ANNUAL OPDX/NODXA DX SURVEY FOR 1994
Here is your chance to be counted. Deadline will be January 31, 1995, with results in February. The questions of the survey will deal with:

1) The DXer of the year. This is a DXer who you thought was outstanding in operating and handling the pile-ups from their DXpedition.
2) DXpedition of the Year (Group and Indivdual). Choose the best and most well organized DXpedition that met the needs of the DX community.
3) The 30 Most Wanted Countries. Choose your 30 most wanted countries.
4) OPTION: Your personal comments about DXing in 1994.

Please use the ballot below. Votes will only be accepted in the following format below.

Your | DXer of the Year| DXpedition of the| DXpedition of the
Callsign | (Person) | Year by a person | Year by a group

3326. Re: Vanity call fee

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-30 03:03:17 UTC
From: prvalko@saturn.acs.oakland.edu
Message-ID: <3bgq1l$m6b@oak.oakland.edu>
Source record: 255972

You guys bitching about $150 for a vanity call really slays me! I would think $2000 for REALLY cool call would not be too much.

Take it from me, I would put MY call up against ANYONE else to see who has the "worse" call, 6 elements and each of the three letters in the suffix is made up of 4 combinations of dits and dahs.

Sooo... the OBVIOUS choice would be to let people (like me) with REALLY long and difficult calls get first crack at cool one-by-one, and unused one-by-two calls.

Other than that... let the market set the price. Do you think that geek in the Alpha ad, with his $6000 IC-781 and $7000 IC-4KL and $4000 amp would blink an eye at two or three THOUSAND bucks for the ultimate contest/DX call? Not on your life. God only knows what he's using for an antenna... but I'll betcha a steak dinner it's NOT an MK3-JR on a tripod or strapped to the chimney.

It looks like an end run around the judgement against the old license fee system. The FCC began abandoning responsibilities wholesale after Burt Lance decided license fees should go to the general fund in the seventies(The cb boom was a goose laying golden eggs in license fees) A suit against the FCC resulted in a ruling that the FCC must provide comensurate services for fees so they quit collecting fees. If someone pays for a vanity call, and gets it, he can hardly complain that no service was provided. The question now is whether the FCC will be allowed to use the revenues generated as operating funds,or if they will disappear down the government rathole.

3329. EOSS-20 Balloon Flight from Air Force Academy

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-30 04:28:30 UTC
From: rickvg@usa.net
Message-ID: <bw$skSEHGkRK069yn@usa.net>
Source record: 255886

```
--------------------------
FLIGHT PROFILE FOR EOSS-20
--------------------------

LAUNCH DATE : December 3,1994

LAUNCH TIME : 17:00 UTC

LAUNCH SITE: United States Air Force Academy

FLIGHT EXPERIMENT: Altitude Sensor Test

SECONDARY EXPERIMENT: SHUTTLE II test flight

EXPERIMENT CONDUCTED BY: USAFA Cadets

PROJECT INTEGRATOR: USAFA Cadets in conjunction with EOSS

Shuttle II FREQUENCIES:
Telemetry: 144.290 MHz (W5VSI id)
ATV (color): 426.250 MHz
Beacon: 147.510 MHz (WB4ETT id)

Fox Hunter Coordination: 447.150 MHz (147.225 MHz and possibly
448.450 MHz backup)

HF Net Control: KA0DPC on 7235 KHz +QRM

PURPOSE OF THE FLIGHT:

EOSS-20 will fly an experimental altitude sensor for the Air Force
Academy. Telemetry will be downlinked from the payload via packet radio.

EOSS-20 will be the first flight of the new SHUTTLE II payload. This
package includes a color ATV system, GPS and a new W6ORE Flight
Computer. This will be a test of these systems. Users of APRS within 400
miles of the launch may wish to monitor the 144.290 MHz telemetry
frequency to plot the progress of the flight on their APRS systems.

HF NET:

During the flight an HF net will be conducted by Sparky, KA0DPC. Updates
will be announced during the flight. Checkins are welcome. The net
starts at 16:30 UTC.

Steve: Bob Locher, W9KNI is still making and selling the LogiKey K-1 CW
keyer. However, he's recently moved to sunny Northern California with room

for lots of antennas and 5 acres of vineyard. Mail from his Deerfield,
Illinois
address is forwarded, but you know how the USPS is.

Bob can be contacted at Idiom Press, P.O.Box 1025, Geyserville, CA 95441.

: | Doc Elliott (helliott@losat.redstone.army.mil) wrote:
: | : There is a petition floating around my local area that says that there is a group led by
: | : Madalyn Murray O'Hare who is trying to get the FCC to stop all religious
: | : related broadcasting. Does anybody anything about this? Is there an FCC
: | : source of info about this document (R.H. 2493)? Does this document number mean
: | : anything to any of you legal types out there?

: | : 73s, de Doc Elliott, KE4KUZ

if i remember the deal right, the problem was people getting a non-commercial
license and then operating essentially commercially.

O'Hare wasn't even involved...

What the petitioners wanted to do was to stop all the non-comm channels
from being picked up by pseudo-non-commercial stations...

Clues that tell you it's bogus:

the document number is an old format.

it goes against the 1st amendment to the constitution.

you never hear about it in the normal press.

it's always brought up by people needing your money to fight the "godless"
government effort to keep their program off the air...

I'm going to assume you have the dope on this kid named Shergold...
anything you hear about some kid with an inoperable disease wanting to
set the record for the most number of (objects) collected is probably
antique news -- they've been there, done that...and would everyone quit
sending those cards and letters....

My favorite keyer is the LogiKey K1 "Super CMOS" keyer from Idiom Press (Bob Locher,
W9KNI). Bob sells them as kits for $48 or fully built with case for somewhere over $100.
Absolutely the best for contesting, with memories, serial number insertion, memory chaining,
etc.

They're available from Bob's new California QTH:

Idiom Press, P.O. Box 1025, Geyserville, CA 95441.

73, Jim, W9WU

The 3-Hr Ap Indices for 28 NOV 94 are: 9 8 28 22 14 7 7 3
Greater than 2 MeV Electron Fluence value is not available.

SYNOPSIS OF ACTIVITY

Solar activity was very low. There were no events of
significance. Region 7811 (S17W50) has decayed and is quiet.

Solar activity forecast: solar activity is expected to be
very low to low. Region 7811 has an outside chance of producing
isolated C-class activity.

The geomagnetic field has been quiet to unsettled for the
past 24 hours. The greater than 2 MeV energetic electron flux
at geosynchronous altitudes was moderate to high.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled. High latitude stations can
expect unsettled to active conditions on the last two days of
the forecast period due to a weakening coronal hole.

Event probabilities 30 nov-02 dec

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 30 nov-02 dec

A. Middle Latitudes
Active 20/40/35
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

B. High Latitudes
Active 25/20/25
Minor Storm 15/20/20
Major-Severe Storm 10/10/10

HF propagation conditions were near-normal over all
regions. High and polar latitude paths saw sporadic and
localized periods of minor signal degradation during the local
night-times, but were otherwise near-normal. Minor degradation
may be observed on 01 and 02 December in response to another
coronal-hole related disturbance, but any signal degradation
from this disturbance is expected to be confined to the high
and polar latitude regions (particularly those on transauroral
circuits). Lower latitudes should continue to see near-normal
propagation.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,

Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

LIST OF REPORTING STATIONS AND THE SATELLITES THEY USE TO MEASURE TEC:

ASH = Ashkhabad USSR (N37E058)
SVE = Sverdlovsk USSR (N56E061)
SAL = Salekhard USSR (N66E066)
TOM = Tomsk USSR (N56E085)
MAG = Magadan USSR (N60E151)
WAR = Warsaw Poland (N52W021)

DIX = Dixon USSR (N74E081)
POI = Poitiers France (N46E000)
WLP = Wallops Island VA USA (N37W075)
OTI = Ottawa Canada (N45W076)
VBG = Vandenberg AFB CA USA (N34W120)
GOO = Goose Bay Canada (N53W060)
EIE = Eielson AFB AK USA (N64W147)
TAO = Taoyuan Taiwan (N25E121)
CHU = Churchill Canada (N58W094)
ARG = Argentia Canada (N48W053)
BER = Bermuda Bermuda (N32W064)
NIC = Nicosia Cyprus (N35E033)
DYS = Dyess AFB TX USA (N32W099)
PAL = Palehua HI USA (N21W158)
BOU = Boulder CO USA (N40W105)
CNV = Cape Canaveral FL USA (N28W080)
ANC = Anchorage AK USA (N61W150)

DESCRIPTIVE CODES WHICH MAY APPEAR IN THE FOF2, M(3000), OR SID SECTIONS:

A = Blanketing Sporadic E
B = Complete Absorption
C = Equipment Problems
D = Frequency Higher than Equipment
E = Frequency Lower than Equipment
F = Spread Echoes
G = FOF2 is less than FOF1
I = Smoothed Value
R = Attenuation

Values in this experimental daily report have not been checked
for errors and may occasionally contain a few. Total electron
content values are given in units of 10^15 electrons per square meter.

MM>Can anyone tell me where I can get it on the net ?
MM>
MM>Thanks in advance E-:-)

Hi, I hope this makes it back to you since it is a gated echo to ARNET. I don't know if it is the latest version, but I have JNOS v1.08c on my "The World of Ham Radio" CD by Amsoft. You will have to find someone near you who has it, as I have no way of getting it to you. Or you can get the CD fro AMSOFT. Their address is P.O. Box 666, New Cumberland, PA 17070-3036 USA. I think you can pick up the CD for about $40.

DL>
Hi I hope you get this message since it is gated to ARNET. You might check
out
the Nov. 1995 issue of CQ magazine. There is an interesting article in
there about 9600 Baud packet and how many of the rigs obliterate the audio
section of the rig to taylor the signal to ham use. The article states that
many times, the rig has to be modified to get the signal out of the rig
before it is tampered with and get the signal into the rig after the mic
input stuff. Interesting article.

Can anyone recommend a Gas powered Generator in the 4000-6000 watt area
good for powering Ham Radios,Stereo's and TV's.

I'm concerned with the quality of the a.c. and how clean it is.

thanks,
Ken

I have been given this tip, several times.

When giving your name in such things as Packet Databases, Fido Pointslists,
Requests for Information,
- include a sliding variable in your adrees or name.
Example - the last person to suggest this changes his middle initial
- another adds an apartment number to his address (although he
lives in a small farmhouse in the english countryside)

As I often give my name and address by telephone, to people who have never
heard of phonetic alphabets, My name and address and ZipCode vary !!!
To give just ONE example, Ignoring the fact that two people might make the
same mistake - It seems, from the Zip Code that perhaps Byte has "given"
my address to Compuserve.

> : ARRL's position?

Problem I see with a fee each time you renew the vanity call is--what
happens when some bureaucrat mistakenly lists _my_ call as a "vanity" call,
and wants to charge me a fee for renewing my license? It takes _years_ to
sort out that kind of problem!

Actually, my callsign _is_ a "vanity" callsign, come to think of it. I
held it back in the '50s and '60s, but when I moved south, I got assigned
WA4TMY. When I moved back to 3-land, the policy of granting a specifically
requested callsign to extra-class licensees for a single, 25-dollar fee was
in effect, so I asked for W3ZID back. Things were simpler then. :-)

I just recently joined ARRL, and if I recall correctly, the application
had a line you could check if you did not want your name distributed to
other mailing lists.

>
>-- Darrell (NR3Y) ...

Well, in my opinion, the question of who distributed your new address information is insignificant. Your license information is supposed to be a matter of public record. Instead of worrying about who did the dirty deed, you would be more appropriately worrying that the FCC may try to send you mail. You are supposed to inform them of address changes and I believe the latest set of rule changes has given the Commision the right to terminate licenses of hams when correspondence from the Commission returned because of an improper address.

All it costs is a 610, an envelope and 29 cents. Better hurry or it'll cost another 3 cents with the postage increase.

I would like to find out more specifics of what kinds of eye damage can
occur. I am having some eye trouble and wonder if my 18 years of hamming,
and tower work on hot broadcast towers may be the cause. In particular, I
was diagnosed with glaucoma 2 years ago, and it is considered very unusual
in men under the age of approximately 50. I was 36 at the time of the
diagnosis.

As a side issue, I have a problem with U.S. stations understanding me where DX stations always understand. In my slight hillbilly accent, I say something like "My name is Ben, Bravo Echo November, Ben". The DX stations always copy my name correctly, but about 1/8 of the stateside stations respond with something like "Nice to meet you, Dan". I guess the stateside guys just ignore the phonetics and go with what they thought they heard. Maybe stations operated by folks who are less comfortable with English pay more attention to the phonetics because they be less cocky about their English language skills.

I was wondering:

i recently saw the movie speed again and was wondering about
the throat mic's they were using in it.

what quality to do you get from that kind of mic? and how
much do they cost on the average?

W>My favorite keyer: CMOS SUPER KEYER II (partial kit for $50) from
W>Idiom Press
W>* Almost zero current drain. Works for years on 3 penlight batteries.

Greetings Wayne:

I built the CMOS SUPER KEYER II when the original article
appeard in QST. Although I really like the keyer I have found that I do
not use it often it still drains about 4 sets of top quality alkaline AA
penlight batteries per year. I wonder if you have done a mod to reduce
the current drain and if you can conveniently measure your keyers actual
current drain and let me know what it is?

About 91 or so I sent my Mirage D1010N that I use for satellite work into Mirage to have that update done. Took two trips (first time back it blew a cap to bits when I fed it atv!) but it's now atv compatible. I don't know whether they do it any more. From talking to them and inspecting the damage after the first blow up, they basically added 100uf caps at 4 points (I think they are basically bypass caps, that now have to handle the 59.97 synch pulses) and perhaps one more. (something is tickling me about one cap becoming at 10 uf someplace). It seems to work fine, I put in 1.5 watts pep from the transmitter and get about 25 or so out.

I understand that the other difference is the drive level. The D1010 can handle up to 10 watts or more on the input, but only produces about 30 watts out PEP with atv. By removing the input pad, you can get closer to 100 watts PEP out, but the max input is now down around 7 watts. You also need the bigger heatsink they sell for the atv amp at that power level. Since I still run my amp primarily for OSCAR 13 work, I left the input pad alone. I have my FT736 throttled down to 10 watts out, but it would still cook it at that level. Besides, with the pad in, I probably have

fewer problems running the amp non-linear.

I live in the relative boonies of upstate ny, so we haven't had much problem with 440 interference - yet. We get clobbered on the input by a linked repeater system, but our output is down at 421.25 (with external VSB filters) so that works ok for now.

There is a big gain for us in having the ability to be tuned by a commercial cable ready receiver - it lets people who haven't invested in the equipment tune in and enjoy and eventually get interested. The simple circuitry also makes for the ability to stuff one of the transmitters into an R/C car or Plane which gets a lot of interest at ham demos and such. Adding an external trombone type VSB filter to one of those would probably make it prohibitive in size and weight.

On the other hand, if I lived downstate in metro NY (which I wish was a different state as it probably should be) I'd be much more concerned about spectrum use. Eventually it will be an issue here, but for now we have a number of fledgling atv'er using DSB gear and no complaints. Eventually I imagine we will be forced to move to 900 or 1.2ghz, but by then that equipment should be more managable. (especially if Gary posts his design and it becomes popular!)

Someplace I read that there is a pull up resistor or something that PC electronics puts in their units to help suppress the lower sideband some (10db) that you take out if you use a high side injection downconverter which uses the lower sideband to get away from the FM repeater interference. So perhaps they aren't quite as bad as everyone thinks.

Joe, I think that the T4XB is a good transmitter. I have a Drake
T4XC and R4C receiver that I picked up about a year ago. I have
some newer stuff such as a Kenwood TS-940, but the Drake C line
gets great reports and has lots of power. The short term frequency
stability after just turning on the C line is about 300 Hertz of
drift, but after that it settles down.

Jeffrey Copeland (copeland@lamar.ColoState.EDU) wrote:
: Two questions for Canadian Hams:

: 1: What are the license levels and requirements in Canada?
: My father-in-law from Montreal is getting interested.

Industry Canada issues the Amateur Operator's Certificate with up to four qualifications. The Basic Qualification is mandatory in order to get an amateur licence. It is a multiple choice test on basic electronic theory, operating practises and process for a modern amateur station. It allows the holder to operate on any frequency above 30 MHz with a commercially available transmitter where the power is no more than 250 watts input. Operation on the 160 and 80 metre bands is permitted if the individual holds the 5 w.p.m. Morse Code cerificate, while complete HF access is accorded with successfully passing the 12 w.p.m. qualification. Finally, to operate with the maximum of 1000 watts, sponsor a club station or a repeater, or "home brew" your own transmitter, the individual must hold the Advanced Qualification.

There is no order in which an individual may take these qualification examinations. However, to repeat, one must hold the Basic Qualification in order to qualify to hold a licence.

Your father-in-law could contact the Industry Canada office in Montreal and I am sure they will be able to direct him to a club that will help him to study for these examinations.

: 2: Can an American licensee operate in Canada without any
: special form etc.

Yes. Just be sure to have a copy of your licence with you.

: Thanks,

Your Welcome

: Jeff Copeland -- 2 more weeks till I take the test

Please don't talk like that to non-native speakers, Peter. Rather,
speak standard English in a slower fashion; you'll be helping them
to learn the language and they'll thank you for that.

Listen to the VOA Special English broadcasts beamed to foreign
countries - try to emulate that slow but proper method of speech.

A T T E N T I O N

All QRPers living in the Houston area

(Others can ignore this if they want,
kind of me what?? :))

I found out that there is at least ONE other QRPer in our fair city. Are there any others? If there are, would there be any interest in having a VERY informal get together on an occasional basis to talk about QRP, show off our latest rigs, tell fish stories, etc.? No dues, no club, no newsletter, no obligation (except to have an enjoyable time). No questions as to what is the Houston area, if in doubt, you are too far away. Meeting place and time by future mutual agreement.

We want to keep this very informal, I am not an organization type, and the other guy says that he is orged out.

Reply as you see fit. (Better by e-mail)

It might be easier to get a Guatemalan call in addition to your US call instead of doing the reciprocal thang. If they're like the US all you gotta be is warm to take the test (plus or minus being a gov't agent). It might be less hassle, you wouldn't have to sign portable whatever, and you'd be DX to your friends!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 30/2330Z NOVEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 30 NOVEMBER AND FORECAST FOR 01 DECEMBER - 03 DECEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 78/17

GOES satellite data for 29 Nov
Daily Proton Fluence >1 MeV: No data
Daily Proton Fluence >10 MeV: No data
Daily Electron Fluence >2 MeV: No data
X-ray background: No data
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
01 Dec 02 Dec 03 Dec
Activity Low Low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 01 Dec: 78/17

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 29 Nov
Learmonth 11 3233 2322
Fredericksburg 16 8
Planetary 15 7

Observed Kp for 29 Nov: 1323 2222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
01 Dec 25 Unsettled to active
02 Dec 20 Unsettled to active
03 Dec 10 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 10 was issued on 28 November and is
current for interval 1-2 December.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
30 Nov normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
01 Dec normal fair poor
02 Dec normal fair poor
03 Dec normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
30 Nov 40 about 15 20% above predicted monthly values

Predicted Monthly T-index for November: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
01 Dec 20 Near predicted monthly values
02 Dec 0 About 10% below predicted monthly values
03 Dec -10 About 15% below predicted monthly values
COMMENT: IPS HF Communications Warning 12 was issued on 28 November
and is current for interval 2-3 December.

Aw, that ain't nothin'... :-)

I used to be WA0ZQW. Bad on phone as well as CW.

I feel I really paid my dues before getting my present call.

My vote is for 146.520 MHz to become an exclusive calling and emergency frequency just like channel 16 in the VHF marine band. That way you can listen for your buddy to call you and then move to another frequency. While you're waiting you are an emergency monitor.

... too simple???

- Rob, N1NTE monitoring 146.520 and 446.000 while not talking on my simplex repeater on 147.405.

Did you notify the post office? The national change of address database
is available (on CD-ROM I beleive) and used by mail order houses
extensively. Yes, someone is selling mailing lists - the USPS.

3380. Mountaintopping in the SF Bay Area and beyond

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-01 01:41:11 UTC
From: msimon@CS.Stanford.EDU
Message-ID: <3bj9jn$o1q@Radon.Stanford.EDU>
Source record: 255923

Are there any Hams out there who would be interested in mountaintopping in the SF Bay Area / beyond? I spend a good deal of time hiking with my 2 Meter HT and enjoy making simplex / long distance repeater contacts with other Hams. I'd be interested in coordinating hikes / contacts with other similarly inclined individuals who have access to high places.

Marc Simon KE6JAF

3381. Callsign database on GEnie

Newsgroup: rec.radio.amateur.misc

GENIE LAUNCHES CALLSIGN DATABASE

Rockville, MD - November 30, 1994 -- GEnie, the online service from General Electric, has launched an online callsign database, according to Glen Johnson, WB2MPK, manager of GEnie's Radio & Electronics RoundTable . GEnie subscribers can look up QSL information for over 600,000 US hams online . The feature can be accessed by typing RADIO at any prompt on the system. The Radio RT has also forged alliances with CQ Communications, publishers of CQ Magazine, Popular Communications and other radio & electronics publications, and Optoelectronics, a major manufacturer of communications and electronics equipment. Members of GEnie's Radio RoundTable can obtain product support from these and other companies online . Optoelectronics does product support exclusively on GEnie .

"We're committed to remaining as the premier online service for radio amateurs and electronics hobbyists" says Johnson. "We have everything from ham radio to shortwave, an online database of upcoming VE exams that users can search by date or city, and more and more companies serving the ham community are joining us. We even have a feedback area for Newsline!"

GEnie will also have full access to the Internet by the end of the year, giving hams access to literally thousands of programs, files and newsgroups.

For further information, contact Glen Johnson, Manager, GEnie Radio & Electronics RoundTable via email at radio.rt@genie.com .

My vote is to never use 146.52 for an emergency but use a cellphone
or professional communications network only for such a situation.

The only time amateur radio ought to be used for an *emergency* is
when the FCC *declares* one.

Amateur radio ought to be used for morale purposes only and
true emergency communications should be performed by
trained, responsible professionals using their own frequencies.

After all, would you really want a "hamamedic" to arrive at
your heart attack?

NOTE: The Effective Sunspot Number for 29 NOV 94 is not available.
The Full Kp Indices for 29 NOV 94 are not available.
The 3-Hr Ap Indices for 29 NOV 94 are not available.
Greater than 2 MeV Electron Fluence for 30 NOV is: 1.6E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7811 (S17W68)
re-developed into a DAO spot group and produced nine B-class
flares, the largest of which was a B7/SF flare at 30/1930Z.
This is the only spotted region on the disk at this time.

Solar activity forecast: solar activity is expected to be
very low to low. Region 7811 has a fair chance of producing
isolated C-class flare activity and an outside chance of an
isolated M-class flare.

The geomagnetic field has been at quiet to active levels
for the past 24 hours. High latitude stations experienced a
short period of major storming from 30/0900 to 30/1200Z.
Activity was most likely the result of a possible coronal mass
ejection as indicated by an impulsive C2/1N flare with a Type
II sweep on 27/1617Z. The greater than 2 MeV energetic electron
flux at geosynchronous altitudes was moderate to high.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled to active for the first day and a half
of the forecast period due to a favorably positioned coronal
hole. Activity should diminish to quiet to unsettled for the
remainder of the period. High latitude stations may see short
periods of minor to major storming, especially during local
nighttime, for the next 36 hours.

Event probabilities 01 dec-03 dec

Class M 05/05/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 01 dec-03 dec

A. Middle Latitudes
Active 40/35/20
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

B. High Latitudes
Active 25/20/20
Minor Storm 20/15/10
Major-Severe Storm 10/10/05

HF propagation conditions were normal over all regions
during the last 24 hours. Some deterioration is expected for
the upper-middle to polar latitude paths over the next 24 hours
in response to an anticipated coronal-hole related disturbance.
Sectors most affected will be the night-sector transauroral
circuits. Minor equatorward expansion of the auroral oval is
expected during this disturbance, but should not significantly
interfere with middle-latitude communications. Conditions
should return to near-normal by 03 December.

NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

My advise would be to look up the 800 numbers for Honda and Generac gen-
erators. Call and ask for spec's and compare. I own a Honda 5000watt and a
4000watt Onan. I like the Honda best. The reason I mention the Generac, is
the addition of a computer controled throttle, operated by demand put on the
generator. Should save a lot of fuel under some conditions. If I were looking
for a new generator today, I would check the spec's on this one!

In the mobile category, I think it was Patriot Games, the unmarked CIA car sported a nice Kenwood Tm741/941. But with the brightness at maximum- I could still not tell which band-modules they had :-(

I guess since us amateurs are grabbing up all the great deals in used commercial equipment (can't beat the $150 Micor bases)- the film industry (read:commercial) is forced into buying our stuff?!

I wonder if Hollywood has any good hamfests, for low-usage radios?

3390. Re: FCC Petition R.H. 2493 (Help!?!?)

>
This petition has been floating around for years. I've seen it 3
different times at my church, initially about 10 years ago. Apparently
someone made this proposal a long time ago, the FCC assigned a number to
it but dismissed it without taking any action. I'm attaching an FCC fact
sheet on the subject (which I picked up off the packet network in 1989)
that explains the problem. 73 - Alan Braun NS0B

10392 B$ 3642 ALL W0LKD ALLUSA 891020 FACT SHEET - RM2493

FEDERAL COMMUNICATIONS COMMISSION
WASHINGTON, D. C. 20554
* * * * FACT SHEET - RM-2493 * * * *
Thank you for your inquiry concerning the broadcast of religious programs.
This information presents basic facts on a subject that in recent years has
aroused widespread interest and has resulted in a great number of letters
and telephone calls to the Commission.

In December, 1974, a petition from Jeremy D. Lansman and Lorenzo W. Milam
asked the FCC to inquire, among other subjects, into the operating practices
of noncommercial educational broadcasting stations, including those licensed
to religious educational organizations. The Petitioners also asked that no
licenses be granted for any new noncommercial educational stations until the
requested inquiry had been completed. The "Lansman-Milam petition" (which
was routinely assigned the number RM-2493) was DENIED by the FCC on
August 1, 1975 -- over 10 years ago! The Commission explained then that it
is required by the 1st Amendment "to observe a stance of neturality toward
religion, acting neither to promote nor to inhibit religion." It also
explained that it must treat religious and secular organizations alike in
determining their eligibility for broadcasting channels.

Early in 1975, the FCC began to receive mail which indicated that in many
parts of the country there were rumors claiming the petitioners of RM-2493
had called for an end to religious broadcasting and that the Commission was
going to prohibit religious programs on radio and television. Such rumors
are false. Additional mail and telephone calls came in from people who
thought that Mrs. Madalyn Murray O'Hair, a well-known atheist, was a sponsor

of RM-2493, or had separately proposed that the FCC consider limiting or banning religious programming, and that she had been granted a federal hearing to discuss this matter. Those rumors are also false.

No federal law or regulation gives the FCC the authority to prohibit radio and television stations from presenting religious programs. The Communications Act (the law that established the FCC and defines its authority) prohibits the Commission from censoring broadcast material and from interfering with freedom of speech in broadcasting. The Commission cannot direct any broadcaster to present, or refrain from presenting, announcements or programs on religion, and it cannot act as a judge of the wisdom or accuracy of such material. Broadcasters -- not the FCC or any other government agency -- are responsible for selecting the programming that is aired by their stations.

We hope the preceding paragraphs will help to correct any and all misinformation about FCC policies on religious broadcasting. Over the past 10 years this agency has received over 18 million pieces of mail on this subject. Every effort has been made to advise the public of the action taken on RM-2493. The laws and the Commission's policies on broadcast of religious programming have been publicized in newspapers and magazines (including TV Guide and Time), in religious publications, and in meetings of religious groups. Because these false rumors still persist, any assistance you can provide by telling your friends and neighbors what the facts are will be greatly appreciated.

Part 3. Why 500 kc/600 meters?

I have researched the literature in order to find an answer to this question, but have found nothing. I tend to think that this particular wavelength, 600 meters, became the standard by accident rather than some body of policy-makers deciding that it was to become the worldwide calling & distress frequency. Maybe the nature of early equipment might be the reason this wavelength became the standard; the length of the antenna on some spark transmitters dictated the center frequency of their very broadband signal - given that the antenna would run the length of the ship might have a bearing on why 600 meters became the international CW wavelength.

Regardless of whether it was by accident or choice, what was handed down to us was a wavelength with excellent evening propagation. Starting at about 2100 local 500 would come alive. Any ship or shore station within 3000-4000 could be heard by an excellent combination of ground wave and sky wave - nothing was missed within this radius! Shore stations of more than 5000 miles were easily copied (Australia and New Zealand boomed in nightly).

Daytime propagation consisted of only ground wave: 300-500 miles was the maximum range possible. Thus most daytime traffic was passed on the HF channels.

The idea of combining a distress frequency and a calling frequency was an excellent one - it insured no distress calls would be missed, and at the same time everyone knew where everyone else was at. No need searching various frequencies looking for a particular ship or shore-station. The result was a worldwide partyline; if you sent so much as a single dit everyone would hear it:

Ships operated on either a one-op or two-op schedule so our broadcasts coincided with these skeds. But shore stations had to remain on the air 24 hours a day. Late nights could become a bit of a bore for some shore ops, heavy eyelids and such. So out of boredom (or maybe by ``accident'') a single dit would ring across the Pacific, only to be answered by another dit possibly several thousands of miles away. Then all hell would break loose: every shore station and any ships with an on-duty op would be sending dits! For several seconds 500 sounded as if 100 or more carriers were ditting away. As quickly as it started it would fade away.

A variation of this was someone sending a single GE (good evening);
of course it would be impolite not to respond in kind so someone
else would answer with GE. Within a half second at least one hundred
GE's would flood the frequency! My log entry would look like this:

GE / GE / GE / GE / GE / (OPNOTE: AT LEAST 100 GE'S SENT) 500 1123Z

Some Coasties were unhappy with their duty assignment (Alaska, or
some LORAN station in the middle of the Pacific, or on board
a patrol ship) and made their sentiments known to the world:
one op would send an F, a second disgruntled Coast Guardsman
would follow with a T, only to be followed by by a third
CG op sending G - three Coasties seperated by 100's or 1000's
of miles of water expressing their thoughts as one. The acronym
FTG stood for a very common expression in the Guard: F___ The Guard.
In the log it goes:

FTG 500 1305Z

Needless to say, the CO (commanding officer) (`The Old Man') of NMO, upon
reviewing the log the following day, would attach a nasty note expressing
his displeasure at seeing such entry in an Official U.S. Government Legal
Document blah, blah, blah... The Chiefs on the other hand would give out a
hardy laugh and express their delight that this acronym was still traveling
the airwaves.

After 2100 local there would be a steady stream of CW on 500 - ships
calling shore stations or other ships:

KOK KOK KOK KOK KOK KOK KOK KOK KOK KOK (making a pest of himself!)
DE (in other words: `who the heck is calling me?')
DE KNLS TR K
KNLS DE KOK R UP 485 K
OK 485/480 UP
EE
EE

Translation: The ship KNLS, ignoring the usual 3X3 callsign format
instead was going to endlessly call the shore station KOK until he
got some attention; KOK interupted him with a simple DE after which
KNLS told him he had a travel report (TR). KOK's answer was `Roger,
I'll transmit on 485 kc' to which the ship answered `Okay, you
transmit on 485 and I'll transmit on 480 - let's go up' (up in
wavelength that is, not in frequency - traditions are hard to
break!). By the way, KOK was a commercial shore station located
on a beach here on Oahu.

Or,

TTT TTT TTT CQ DE ZLD ZLD CYCLONE WARNING NR 15 QSW 428 AR

(These types of broadcasts, prefaced with the prosign TTT, or
XXX will be discussed in Part 4.)

Or,

CQ CQ CQ DE WNOP WNOP ANY ONE HV 2100Z SOUTH PACIFIC WX? K
WNOP DE XSU WILL GIVE 2100 WX ON NEXT BCST AT 2200 K
R TKS OM SU
SEEU
EE
EE

and on and on throughout the night - very orderly. You'll note each series of transmissions end with a `dit dit' (recorded as EE); and amateur radio operators thought they invented this `prosign'!

Part 7 will contain an actual transcription of one of my evening logs. Part 6 will discribe a distress in which a ship broke up in heavy seas and all hands were lost - it will contain my QSO with the ship's operator up to the last second of his life.

End of Part 3.

Posted April 11, 1994

This file contains the Final Report of the ARRL Ad-Hoc Committee
on Preferred Callsigns

Committee Members:
Mr. Steve Mendelsohn, WA2DHF, Chairman
Mr. Frank Butler, W4RH
Mr. Tom Comstock, N5TC
Mr. John Kanode, N4MM
Mr. Brad Wyatt, K6WR

Executive Summary

The Committee was created by President Wilson to recommend a
response to the Board in P.R. Docket 93-305, the Vanity Callsign
proposal. The charter from President Wilson included a request
that member input be sought in the limited time before the March
7, 1994, filing deadline.

To accommodate this request Vice Director Rothberg and the
chairman conducted a survey of our respective divisions using
packet radio, mail and a request to newsletter editors to
reproduce the survey form for club input. Over 730 responses
have been received and tallied. Numeric results track with
anecdotal results seen in member letters to Headquarters.

The Board family has been especially helpful in forwarding and
recounting comments from the field. Directors Burden, Comstock,
Gordon, Heyn, Kanode, Lewis, Olson, Wyatt, Vice Directors
Brackob, (monitoring the discussion on CompuServe) Brown, Frahm
and Rothberg have forwarded member response by mail, through
Headquarters and electronically to the Committee.

Executive Vice President Sumner made members aware of the
Committee's work through an editorial and article in February,
1994, QST. EVP Sumner and VEC Manager Jahnke provided the
Committee with an excellent option paper on electronic submission
of license requests by various means.

Recommendations

1. Who Should Participate

The Committee recommends that the Board adopt the position that
all amateurs be eligible for participation in the program after
an initial phase in period.

While 7% of the respondents to the survey were against the program entirely and another 3.5% wanted to limit the program to General class and above, the majority of comments received welcome the creation of the program while recognizing that some method of initial filtering must be used to keep the FCC from being inundated with applications in the beginning.

2. The issue of Fees

The fee quoted in the Docket, $7.00 per year collected for the length of grant of license (10 years), was set by Congress in the Budget Reconciliation Act of 1993. To change the amount or type of fee would require the League to commit its efforts in the Congress toward changing the fee.

The Committee recommends that the League seek such relief in favor of a one time administrative processing fee with the understanding that no amateur licensee should incur a user fee.

There is no periodic processing expense related to this program after the initial look-up work has occurred. Labor involved with renewal of a Preferred Callsign will not differ in any way from the renewal of a non-preferred callsign, therefor the Committee believes no additional labor charge should be incurred by the licensee.

During the course of this proceeding people filed comments with the Commission asking why those with Preferred Callsigns have to pay recurring, yearly fees. The Commission's response may well be to ask that ALL amateurs pay such user fees. Without question, this would be viewed as an undesirable outcome to such a question.

Additional factors supporting the one-time administrative fee position include the time value of money and reduction in administrative workload.

The Government benefits by collecting the entire fee at the beginning of the process rather than on a yearly basis or at the end of the license term. The one-time fee concept would also greatly reduce the Commission's fee collection workload by not having to administrate an ongoing fee collection process at license renewal time.

3. Holders of previous Preferred Callsigns

The Committee recommends a statement that any callsign held prior to the start of this program shall be considered a sequential callsign and exempt from any administrative fee associated with this program.

From: john.duke@rodent.raider.net
Message-ID: <1e5.6422.2725.0ND9F297@rodent.raider.net>
Source record: 255584

(Continued from previous message)

This should reduce processing and correspondence time if the 10 requested callsigns are all unavailable. The applicant need not fill in all 25 callsigns, but it would increase the chance of a positive match if the applicant had 25 choices.

8. Retirement of Callsigns

A small number of commenters stated the belief that re-issuance of callsigns of silent keys would be somehow disrespectful. The Committee does not share this viewpoint.

While the Committee was sensitive to the fond memory the silent key's friends might have, the callsign is really the "property" of the Commission and is part of the condition of grant to the licensee. In essence it is "loaned" to the licensee for the term of the license. It would, therefore, become eligible for re-issuance once the renewal grace period had expired.

If an individual passed away just before license renewal time it would be at least two years before the callsign became available for re-issue at the end of the renewal grace period. A more probable condition would be that the licensee would pass on in the middle of the license term. Then the callsign would not become available for between four and seven years after the amateur passed on.

Should an individual, club or group think highly of the deceased, nothing precludes finding an inactive ham and asking the individual to change callsigns by requesting the silent key's old callsign through this program.

9. Out of Area Callsign Issuance

The Committee recommends that within the lower 48 states the Commission continue issuing callsigns with the number within the callsign relative to the applicants current permanent address. This recommendation would be for Preferred Callsigns as well as sequentially generated callsigns.

A quick historical retrospective is in order at this point. One of the original reasons for breaking the continental United States into ten callsign districts was to help the FCC's Field Operations Bureau begin to locate an emitter for enforcement purposes.

Today's state-of-the-art direction finding does not need to know which callsign district the emitter is located in. This fact was part of the rationale the Commission used in eliminating the requirement for a licensee to sign "portable" when away from the licensed station location. Therefore, the Commission doesn't appear to care whether the a licensee has a district indicator consonant with the operators station location.

However, anecdotal evidence in letters and on survey forms indicates that, contrary to the Commission's technological needs, most amateurs have grown accustomed to the practice of callsign numbers indicating which area of the country the licensee is in and would like the tradition continued. The callsign number gives the operators on each end of the circuit an immediate indication of where the other is and "in which direction to turn the beam."

Therefore, the Committee recommends this tradition of issuing callsigns with the number within the callsign consonant with the applicants current permanent address be continued.

10. Outside of the Continental United States

Amateurs in Alaska, Hawaii, Puerto Rico, the American Virgin Islands and in the Pacific have shared their concern with Directors Wyatt and Butler about amateurs being able to acquire callsigns from their area without being a current permanent resident. This is a valid concern because in some areas, notably Hawaii, the KH6 callsign block is nearly gone. Most of it has been assigned to visitors and those who are now deceased.

While the re-issuance of callsigns of deceased amateurs will ease the problem, the Committee recommends that outside the continental 48 states applicants be required to furnish the Commission with some form of documentation indicating permanent residency. Visitors would continue to use the portable designator, thereby not depleting a callsign pool available only to permanent residents.

11. Specific Comments on the NPRM

New 97.19 (c) Substitute the following:

Each request for a renewal of a operator/primary or club station license retaining a call sign assigned under the vanity call sign system shall be made on FCC form 610-V. The form must be submitted [eliminate "with the proper fee"] to the address specified in the Private Radio Services Fee Filing Guide. To renew the license without retaining a vanity call sign, the applicant must use FCC form 610 as specified in Section 97.21.

New 97.19(f)(3)

(Continued to next message)

* 1st 2.00b #2317bt * If Liberals are LEFT are Conservatives "RIGHT"????

3395. FYI 4

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-01 06:25:00 UTC
From: john.duke@rodent.raider.net
Message-ID: <1e5.6423.2725.0ND9F298@rodent.raider.net>
Source record: 255585

(Continued from previous message)
A call sign that is vacated by the licensee is [add "not"]
available to the vanity call sign system [add "for 2 years
following the expiration of the license"].

Sentence Added to the end of 97.19(g)

A callsign previously held by the applicant, available to the
vanity callsign system but expired, may be requested without
regard to license class group or current permanent residence.

New 97.19(g)(1)

The applicant must request that the call sign held be canceled
and provide a list of up to [change 10 to 25] call signs in order
of preference. The list will automatically end with the call
sign vacated as the [change "tenth" to "twenty sixth"] choice.

New 97.19(g)(2)

The first available call sign from the applicant's list will be
assigned. When none of those call signs are available, the call
sign vacated by the applicant will be reassigned [add "and the
administrative fee returned".]

New 97.5(d)(2)

A club station license (FCC Form 660) issued to the person by the
FCC. A club station license is issued only to the person who is
the license trustee designated by an officer of the club. The
trustee must hold an FCC-issued Amateur Extra, Advanced, General
or Technician operator license. The club must be composed of at
least [change "two" to "four"] persons and must have a name, a
document of organization, management and a primary purpose
devoted to amateur service activities consistent with this Part.

12. Questions Posed in the Discussion Section

In paragraph 5 the Commission asks about alternative ways to file
form 610-V.

The Committee recommends that the same, simple, ASCII format used
in League contest filings be recommended to the Commission IS
group as a starting point for electronic filing

In Paragraph 6 the NPRM requests comments on distribution of
available callsign information.

The Committee recommends that a League computer and modem, or HIRAM be made available, in the short term, as a distribution method with the Commission filing at least weekly updates or sending a disk or disks detailing callsign availability.

Alternately, for-profit data services, such as Compuserve's Hamnet forum, could be used by the Commission to make current callsign information available.

13. Special Event Callsigns

The Committee recommends that 1 X 1 callsigns, such as K2A, be made available for limited duration special events of national significance.

There are likely to be few special event stations of national significance operating at any one time within a single call district. Therefore, the issuance of a 1 X 1 callsign should be possible without measurably adding to the Commission's workload.

14. Final Comments

The Chairman would like to thank the Directors Butler, Comstock, Kanode and Wyatt, EVP Sumner and VEC Department Manager Jahnke for the hard work they did in such a compressed time period.

A statistical treatment of the data used to derive the Committee's position will be sent as an enclosure to this report.

Respectfully Submitted,

Stephen Mendelsohn, WA2DHF, Chairman

John Duke
Nashville Tn.

(Continued from previous message)
4. Phase-in Periods and Priorities

The Committee recommends a phase-in period to allow the Commission a reasonable chance to process the expected heavy initial submission of applications.

Conversations with Commission Information Services staff in Gettysburg indicate that no additional application processing manpower will be used to work on Preferred Callsign applications. The same four people who process all new and renewal form 610s will be processing the new form 610-V as well. Therefore, a phase in period would be wise to prevent severe overload at Gettysburg.

Phase-in periods may be perceived as "gates". As each succeeding gate opens it will admit applications from a new group as well as any group allowed by a previous gate.

Gate one would allow applications from holders of previous callsigns who have lost their original call through failure to renew at the proper time or having moved from one location to another mandating a change of callsign. A callsign could be recovered even if it did not match the applicants current permanent address.

Included in this group would be those who wish to obtain the callsign of a direct family member. The term direct, as used here, would only include a brother, sister, spouse, son or daughter of the original licensee.

The Committee recommends that clubs with lapsed club licenses also be allowed to recoup those callsigns in the first group.

The second gate would include all Extra Class licensees and those enfranchised by gate one.

The third gate would include all Advanced Class licensees and those enfranchised in gates one and two.

At this point the system would be thrown open to anyone else desiring a Preferred Callsign.

5. Club Applications

Clubs wishing to obtain the callsign of a silent key member could do so in the second gate period if the trustee of the club were an extra class licensee. This should present no problem for most

legitimate clubs. Similar logic would apply to trustees with other classes of license.

The Committee believes family members should have first choice of a silent key's call. Should no family member desire the call, the club should have next choice.

It is been the League position that the number of members of a club be raised to at least 4 for a group to be considered a "radio club". This proceeding again emphasizes the need for the Commission to raise the number of members needed to ensure legitimacy and prevent fraud.

The League's Part 97 Rewrite Committee suggested raising the number of members required in Part 97.5(d)(2) from two to four. The Committee recommends this proceeding be used as an opportunity to restate that position.

The Committee recommends that, for purposes of defining a legitimate club in Part 97.5(d)(2), the number of members be raised from the current 2 to at least 4.

6. Vacated Callsigns

As proposed in the NPRM, a call is considered "vacated" when its previous owner has been assigned a Preferred Callsign. The Commission would put the vacated call into the available pool immediately. The Committee believes this could lead to many problems. As an alternative...

The Committee recommends that the vacated callsign not be reassigned for a two year period.

Incoming QSL bureaus, especially, have noted that many services count on the user callsign being correct. An instant reassignment of a prior held call to a new licensee could cause multiple problems for volunteer service groups, such as the bureaus.

Another consideration is "trafficking in callsigns" The Committee believes that a two year hold on a vacated callsign would preclude questionable practices arising in which one amateur would persuade another to change their call so the first amateur could acquire the desired call. This practice could open up a new area of fraud allowing people to submit questionable documents showing that amateur B wanted to give up a call so amateur A could acquire it.

7. Number of Choices on Form 610-V

The Committee recommends that the number of choices be increased to 25.

Source record: 255834

Tonight, I was playing with the buffalo server. I was trying to find the latest callisgn in my area and discovered something interesting: In the N?xxx series, there are no calls with the suffix WOP. While I realize that WOP is sometimes considered a racial epithet, I note that there are NIGs, JIGs, SPCs, and a good number of other such calls. (The fact that W?xxx calls with WOP exist would seem to be indicative of the recent political correctness trend.)

Now, I recognize that any swear words are omitted (FUK, ASS, etc.), but I was just sort of shocked to see WOP not there. Oh well, I'm just rambling...

Oh, and by the way, I hope this doesn't offend anyone - it was just an observation!

Source record: 255832

With all respect, I must give a personal story as a rebuttal to grady@netcom.com's comments below:

About four weeks ago, my wife, baby and I were driving in an unfamiliar town some distance from my home when we were rear ended. The woman who hit us needed medical assistance and I wanted a cop there to take a full and complete accident report so that the insurance companies would have accurate information. Of course, I tried to make contact on my 2M rig, but the only repeater frequency I could reach (not knowing the local ones) were ones from my home, some miles away. As I was weak when I was calling Mayday (the woman acted pretty hurt) it took about fifteen minutes to reach someone. (No phones near by that I knew of ... both vehicles rendered inoperative ... nothing else to do.)

Finally, someone heard me and relayed a message to the state highway patrol, and told me of a local repeater that the highway patrol MONITORS! How was I to know, I wasn't from there ...

I don't want an amateur medic, but when something happens I would be very grateful to know that there is one frequency which is the emergency frequency where I can use my amateur radio to report a problem to the appropriate agency.

Maybe someone would say this was not an emergemcy. The woman who hit us sure thought it was. Oh, she fully recovered, we later found out, but we had no way of knowing at the time whether she would get better or die.

Once, there was a frequency in the CB band called "Channel 9" that police departments would often monitor. Why can't we declare the same thing? I'd chip in on a scanner or old crystal controlled rig for my local police department.

Not far from where I live, there was a series of bad fires and a major earthquake about a year ago. During both disasters, there wasn't *TIME* for the FCC to declare a state of emergency. Amateurs helped in supporting the professionals, and the professionals were freed for the more intensive duty. The professionals were grateful!!!

As much as I enjoy playing with amateur radio, the title in the U.S. is "service." We have many privledges amateurs in other countries don't have because we are an emergency service. (Example: much higher power limits than other countries allow.) With those privledges comes responsibility, and we should live up to our responsibilities.

KE6GXD

True, true, all too true, but they'll go whining to politicians who
also have no technical knowledge, demanding ALL private radios other
than covering the AM/FM broadcast bands to be made illegal.....

If you stir up ignorant people, you must anticipate them doing
something ignorant. As non-technically-literate people form the
majority, so do their votes.

OK, I don't always practice what I preach, I once had exactly this
conversation, and finished with " But how do you know who to report to
the police?"

Cheers

3404. Amateur Radio: Elmers List Info and Administrivia

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-01 12:00:19 UTC
From: pschleck@gonix.com
Message-ID: <radio/ham-radio/elmers/admin-1-786283214@gonix.com>
Source record: 255838
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

Posted-By: auto-faq 3.2.1.2
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.10 10/30/94 22:07:48
Changes: Uniform Resource Locators (URL's) now used throughout

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via Usenet. Any other uses, please E-mail for permission.

[Special note: My E-mail addresses have changed, reflecting a move to Greater Omaha Public Access Unix, which was motivated by a desire to seek a stable site for the Elmers List for some time to come. See my signature below for the new addresses. My old E-mail addresses, at the University of Nebraska at Omaha, will probably work for the foreseeable future, but are not guaranteed.]

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at the Ohio State World-Wide Web Server (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide further information about how to obtain and use WWW client software such as Lynx and Mosaic (see his entry). While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of this somewhat radical new standard, especially to many users who can't or won't use WWW. Those users should be assured that I wouldn't have adopted a standard unless it was easily human-readable by those

accessing this document as straight ASCII (which is one of the main reasons why the entire Elmers list isn't HTML, MIME, MMDF, or one of many other competing, mostly non-compatible, information formats). The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all http: URL's in this directory also have corresponding ftp: or gopher: URL's).

For more information about URL formats, see:

http://www.cc.ukans.edu/lynx_help/URL_guide.html
ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://info.cern.ch/hypertext/WWW/Addressing/URL/URI_Overview.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and

desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I have started to maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@gonix.com, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-M]" and "Amateur Radio Elmers Resource Directory [N-Z]." Since the list is cross-posted to the following newsgroups:

news:rec.radio.amateur.misc
news:rec.radio.info
news:rec.answers
news:news.answers

on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or

"usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/a-m
send usenet/news.answers/radio/ham-radio/elmers/list/n-z
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar with them, and cannot offer much technical support regarding their use. (I'd appreciate feedback on whether or not you find them useful, though.)

5. Internet Gopher: The latest copy of the list should be available from the following Gopher sites:

gopher://cc1.kuleuven.ac.be/
gopher://jupiter.sun.csd.unb.ca/
gopher://gopher.univ-lyon1.fr/
gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available from the following WWW site:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/elmers

The advantage of reading the Elmers list at this site via WWW client software is that all URL's are converted to hypertext links.

see also:

news:comp.infosystems.www.misc
news:comp.infosystems.www.providers
news:comp.infosystems.www.users

7. Wide-Area Information Service (WAIS): The latest copy of the list should be available from the WAIS server at:

wais://rtfm.mit.edu/usenet

see also news:comp.infosystems.wais

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

John Ackerman AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building (particularly
higher speed stuff) and TCP/IP. I've got quite a lot of info on using
the Kantronics D4-10 19.2kB radios, as that's the hardware we've been
struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a result,
the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related
mailing lists. Its purpose is provide a medium for communications among
those interested in packet radio networking, both dealing with technical
issues and political/regulatory ones. We'll discuss things like how the
potential 219MHz band will fit into the networking picture, how to link
areas using different networking schemes, how to set network parameters,
etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending
mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details
about the Net-SIG (including upcoming conferences).

(See also Bob Nielsen for more information about TAPR)

Joint ampr.org IP Coordinator for Ohio subnet (44.070.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP
numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

(See also Tony Schliesser)

[Editor's note: All ampr.org coordinators are listed in the document

Jay Appell --> KA1SNA

1976-1978 FCC Personal Users Radio Advisory Committee
Task force for rules Rewrite Citizens Radio Service
Rules Interpretation

1988-Present Stratus Computer/ Technical Support Engineer

I am CEO of Creative Media Productions a multimedia consulting
company.

Address: Jay_Appell@cac.stratus.com
Telephone: 1-508-478-6969 X200 at Creative Media Productions
1-508-478-1429 24 Hour Ham radio BBS and other topics

I enjoy SCA reception and multimedia use in Amateur Radio. If anyone would
like to reach me by modem, 508-478-1429 (24 Hr) BBS 14,400.

I have been referred to as the ham responsible for digital users manuals
in amateur radio. The first manual was the DJ-590 and subsequent manuals
included the 560,580 and 600 for Alinco. My contacts in the amateur radio
community have helped other amateurs to know more about products, hidden
features and new product offerings. The BBS will now include the latest
info on YEASU and ALINCO products. If you have a product that you wish to
have evaluated for the general amateur community, please contact before
sending.

If you have questions with regard to customer service at these
companies, please forward to me and they will be passed to the company
contacts.

Rob Bellville N1NTE

rbellville@aol.com

PO Box 515
Millbury, MA 01527-0515

ATTENTION RADIO NEWCOMERS!

Are you interested in radio communications but don't have
enough information? Do you have questions but no one to
ask? Are you looking for a publication geared toward the
novice radio enthusiast?

***** FIRST CONTACT *****

"First Contact" is a newly forming publication. An
electronically distributed email newsletter via the Internet
for the beginner. Here is a forum to get the information
you're craving. Get involved in this fascinating hobby!
Scanning, ham radio, shortwave listening, CB radio,
General Mobile Radio System (GMRS), etc. will all be
covered.

You input is essential to the success of this publication. I
need to know what you want to know and what subjects
you want covered in the newsletter. I will attempt to
publish on a monthly basis, possible bi-weekly if there is
enough interest.

The only "cost" on your part is to fill out a subscription form
completely (E-mail for a copy). A classified section is being
contemplated with a small fee to advertise. Hard copies
will be available to those without email access. Please
contact me for details.

Everyone is welcomed to subscribe whether you've never
turn on a radio or whether you're an old-timer. I am
looking for authors to contribute short articles on the
subjects you request.

So let's get "First Contact" off to a good start! Get your
radio information via email. Subscribe NOW!

***/

Author of the following MS-DOS ham programs:

AutoExam - Examination simulator and study aid
AutoCW - Morse Code practice program
DOSGATE - allows users to run programs on your PC remotely (AutoExam compatible)
AutoCall - Allows use of the Buckmaster HAMCALL CDROM online callbook with DOSGATE
AutoFax - Allows reception of weather fax using Kantronics TNC's

SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available via anonymous FTP from:

ftp://wuarchive.wustl.edu/mirrors/msdos/hamradio/

or write me at:

7 Red Field Circle
Derry, NH 03038

and enclose:

A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5" or 5.25").
A Self Addressed STAMPED return diskette mailer.
A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

tomb@lsid.hp.com

Electronic Circuits
Antennas and Transmission Lines

My electronics expertise is mostly analog, but I have some insights into
DSP applications that can do better in what used to be the analog
dominions. I can be of the most help with low-frequency analog stuff,
particularly measurements and low-level/low-noise/low-distortion
applications. I breadboard with IC's, discretes, and surface mounts
(which I prefer to use now, as surface mounting requires less drilling
of PCB boards once they are etched). My electrical engineering
education (Ph.D.) emphasized control systems. I also have a clear
understanding of transmission line measurements and behavior (a
personal research interest for the last 25 years or so).

Relayer of Amateur Radio Newsline Bulletins

Amateur Radio Newsline is produced as an audio service by Newsline, a
service of the Westlink Radio Network. The transcribed version is produced
by Dale Cary, WD0AKO from materials provided by Newsline, and is jointly
distributed to online services and bulletin board networks by Steve Coletti
and Dale Cary.

Copyright owner is Newsline. Permission to reuse all or part of either
this written or the audio form requires that the item be taken in its
entirety, not be subject to any further editing or commentary, and that
full credit be given to Newsline as the source.
~~~~~~

Permission is granted to all amateurs who want to transmit the audio version in its entirety over nets or repeaters. The text version may be used for packet distribution as long as it is sent in its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in its full form over voice or digital forms of Amateur Radio, it is recommended that the closed circut advisory be deleted. Audio, Computer, and Packet retransmissions must be made without the editing or deleting of any other part of the Newsline content. Unauthorized additional commentary to the original message is also prohibited. To do so is a violation of copyright and subjects the initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions, and may be used as a reference source in bulletin board discussions under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of Newsline.

Editorial comment, news items and all other business should be directed to Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.

Scott Ehrlich, Amateur Radio Callsign: WY1Z
How to reach me: wy1z@neu.edu [Internet], wy1z@wa1phy.ma [Packet]
Boston ARC FTP archives: ftp://oak.oakland.edu/pub/hamradio/
Boston ARC Web page: http://www.acs.oakland.edu/barc.html

I've played around with Mac and PC hardware, as well as dabbing a
little with DOS, UNIX, MacOS, with a tad of VMS operating systems.

I co-maintain the Boston Amateur Radio Club anonymous FTP file archives
with Phil Temples, K9HI (k9hi@netcom.com).

A sampling of the archives include:

A virtually complete archive of all ARRL bulletins since 1992 is
available at ftp://oak.oakland.edu:/pub/hamradio/barc/w1aw-list/

A mirror of all files available from the ARRL info server is also
available: ftp://oak.oakland.edu/pub/hamradio/arrl/infoserver/

Programs mentioned in QST are in
ftp://oak.oakland.edu/pub/hamradio/arrl/qst-binaries/

Amateur Radio Newsline is now also being archived, too:
ftp://oak.oakland.edu/pub/hamradio/docs/newsline/

Mike Ardai, n1ist@netcom.com, runs the following Boston ARC mailing lists:

newsline-list (Amateur Radio Newsline)
w1aw-list (ARRL Official Bulletins)
letter-list (ARRL Letter)
ky1n-list (KY1N VEC listing, Local Boston area VE sessions)
barc-list (local Boston-area stuff)
barc-races (again, local)

fieldorg-l (ARRL Field organization discussions)
ham-tech (Untamed technical discussions about the hobby)
fox-list (local Boston stuff - T-hunting)
qrp-l (QRP, or low power, radio, previously maintained by Bruce
Walker at think.com)
arrl-exam-list (amateur radio license examinations scheduled in the US and
in some foreign areas.)
arrl-ve-list (ARRL VE Announcements, run by ARRL VEC Bart Jahnke)

To join any or all of the above:

Send a message to: majordomo@netcom.com
In the body of the message, type: subscribe list_you_want

Ham Radio and More, the radio show carried live every Sunday (6pm - 7pm
EST) on the Talk America Radio Network, now has a World Wide Web home page:

http://www.acs.oakland.edu/barc/ham-more/ham-more.html

The Boston Amateur Radio Club also has a World Wide Web Home Page:

http://www.acs.oakland.edu/barc.html

Due to the popularity of the KY1N VE listing and W1GSL's hamfest list,
I have incorporated both of these listings into the Boston Amateur Radio
Club's Web page:

http://www.acs.oakland.edu/barc/ne-happenings.html

You will need Lynx, WWW, or Mosaic to view them. Ask me for more details
about this.

ARRL Laboratory Engineer

Radio Frequency Interference (RFI) matters
Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class

postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If anyone is having a problem with CATVI, send a 9X12" SASE with 4 units of postage to the ARRL Technical Department Secretary. Ask for the "EMI/RFI Package" and "EMI/RFI - CATV." The CATV package includes a reprint of the article I wrote for Communications Technology -- the journal of the Society of Cable Television Engineers. Your local cable company will recognize this publication and will give credence to the words therein.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

ARRL info server files may also be accessed via anonymous FTP at:

ftp://oak.oakland.edu/pub/hamradio/arrl/

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing
your way to hamdom, the cheapskate's approach, let me
know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors
and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS Friday Night Fist Function

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq: 80 meters --- 3702.5 khz for all hands.
40 meters --- 7102.5 khz alternate, for all hands
(between the heterodynes)
(someone scout out a better QRG)

Standard calling signal: CWIST IMI DE <yourcall> K (if there
are no control stations calling for
you to check in), or,
CWIST DE <yourcall> K (if there is a
control station inviting checkins)
(The alternative check in for those OTs
with salt behind the ears is a simple
DE to get the control station's ears
followed by DE <yourcall> K when the
control station acknowledges.)

Note: A simple informal net style protocol will generally be used, unless no control station assumes control for the evening, in which case it is an open roundtable format discussion group.

Note: The midnight local time gathering is designed to maximize the number of checkins spread out over the world, so less confusion and more checkins are heard. The hope is that someone will be aboard almost anywhere and be heard at least locally, anywhere in the world.

Definition: A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of radiotelegraphy, and the refining and developing of the technology of radiotelegraphy.

Author of NA4G's National Electrical Code for Hams

ABSTRACT

This work was presented as a talk to the Homebrew Special Interest Group (HB-SIG) of the Raleigh Amateur Radio Society (RARS), on 15 January, 1991 and was revised for another presentation on 26 January, 1994.

This document contains excerpts of the National Electrical Code (NFPA 70-1990) that, in the author's opinion, apply to the installation of amateur radio equipment as would commonly be found in most amateur radio stations. Direct excerpts from the Code are contained within inset quotations. Paraphrased excerpts from the Code are itemized. The author's interpretation and discussion of the Code is set full-width. The author's interpretation and discussion of various sections of the Code is not meant to be all-encompassing, nor the official interpretation of the National Fire Protection Association, nor of any offical governing body having legal authority of jurisdiction over electrical installations, but is meant to be used as a teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one'...

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/faq/top.html
ftp://rtfm.mit.edu/pub/usenet/radio/ham-radio/faq/

and

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/cb-faq/top.html
ftp://rtfm.mit.edu/pub/usenet/radio/cb-faq/

Please direct all FAQ submissions, feedback, and administrivia to
hamradio-faq@kluft.com or cb-faq@kluft.com.

As with any volunteer effort, new volunteers are often needed. We need
new editors to post the above FAQ's. Preferably this should be
someone who has enthusiasm for hobbyist radio, experience with UseNet, and
the ability to work with the other editors. No single person can know
all the various aspects of these diverse hobbies so the editorial review
groups are intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is
written in PERL. So it would be a plus for volunteers to post the
FAQ to have PERL installed on their system and be able to use "cron"
or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer
should contact one of the above administrivia addresses.

A mailing list for rec.radio.amateur.* FAQ and Netiquette posting
maintainers, as well as anyone with a sincere interest in helping
keep the rec.radio.amateur.* newsgroups the friendly and useful
forums they are today, is also available. To subscribe, send E-mail
to rra-wg-request@amdahl.com.

++

Steven M. Knapp KA9QOA Computer Engineering Senior
sknapp@iastate.edu Vice President Cyclone Amateur Radio Club
Iowa State University; Ames, IA Durham Center Operations Staff

A few members of our ham radio club were interested in helping out.
Since our turnover is usually 4 years or so (graduation is a horrible
thing), I thought it may be difficult for us to keep the list up to
date. I thought that by creating a local mailing list called
"elmers@iastate.edu" we could add or remove people as need be. There
would always be at least one person receiving mail on that list,
usually more! Even after I graduate, this list will be maintained
allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

| EVER eat money. - RFC1288 (Finger) | AX25 thing: G7GPA@GB7COV.#29.GBR.EU |
+---------- These are my opinions, not anybody else's, so bog off. ----------+

There is now a mailing list set up for the UK TCP/IP Networking Group (UKIP). This is a loosely-organised group set up to promote the use of TCP/IP networking protocols over radio in the UK, and to encourage the establishment of high-speed backbone links and network gateways.

If you want to subscribe:
Send mail to ukip-request@cs.nott.ac.uk. This is handled by a human rather than a listserver, so be polite :-)

To post to the list:
Send mail to ukip@cs.nott.ac.uk. Subscription requests and other administrative bits and bobs should go to ukip-request, _not_ to the list as this just means that lots of people read your subscription message and get cross.

I can personally answer quite a lot of the questions about TCP/IP-related subjects.

Be forewarned that the list is fairly technical in its discussions, so probably not the best place for beginners to start :).

Owner of the PBBS Bulletin Forwarding Mailing List

The purpose of this list is to provide Sysops and Networkers a server in
which to forward bulletins and also discuss forwarding problems and obtain
forwarding partners. This server is also for the exchange of general
information relevant to all Amateur Related PBBS software packages available

today.

Owner of the F6FBB Packet Bulletin Board System Mailing List.

The purpose of this list is to provide both sysops and networkers
with tricks/tips/help as well as software updates for the F6FBB
packet bulletin board system.

To subscribe to or unsubscribe from either of the above lists, please
send electronic mail to:

listserv@stat.com

and include the command:

subscribe list-name

or

unsubscribe list-name

as the first line of your message, where list-name is either bull-fwd
or mars-list. An acknowledgement/welcome message should follow very
shortly.

(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back
to the 1920's. I will be happy to assist those needing copies of
out-of-copyright information for specific makes and models of
receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all
types. Unfortunately I have not taken the time to catalog all this
information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment,
(and I have the information in my collection) I will research and copy
it for you. Cost will vary depending on the time required to find the
information and the amount of pages to be copied. I estimate 10 pages
or less at $1.00/page including US postage. I will quote on larger
manuals.

This is NOT my career or a business. Any requests must be prepaid or I will ship COD at additional postage costs.

Peter Reynolds reynolds@stc.nato.int CompuServe: 100276,1340
voice: +31-70-314-2401 fax: +31-70-314-2111 radio: KE4BAD
Senior Scientist, Radio Branch, Communications Division
SHAPE Technical Centre, PO Box 174, 2501CD The Hague, The Netherlands

I am very lucky in that I earn my living in radio communications, so my
expertise is fairly broad (but not focused on amateur techniques only):

Modulation types - FSK, PSK, MSK
Error control - various types of ARQ and FEC systems
RF - Antennas, HF propagation
Networking - TCP/IP over HF
Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over
the years. I always enjoy discussing and researching a communications
problem so if you don't see it listed above drop me a line anyway,
especially if you happen to be in Europe.

Amiga 1000, WB 1.3 | INTERNET: salnick@DejaVu.spk.wa.us
WA9BVE |

I can help people with HF stuff, cheap antennas, and am willing to help
troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service their
own equipment. I would like to see a turn-around here...

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxilliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In the future, an archive of files will be accessible by anonymous ftp or possibly by email. In the meantime, check the FTP site:

ftp://ftp.ucsd.edu/hamradio/

for AMSAT-related files. Consult your local guru for help on using
by anonymous ftp for AMSAT-related files. Consult your local guru
for help on using anonymous ftp.

The message remailing service permits users to send each other mail
on the Internet without keeping track of each other's Internet
address. The remailing service allows each user to receive mail sent
to the address callsign@amsat.org, where callsign is that user's
amateur radio callsign, or other unique identifier. Mail sent to
that address will be routed first to the AMSAT.ORG host at UCSD in
San Diego, then remailed from AMSAT.ORG to the network address
specified by the user. In most cases, this process delays the
message by only a very few minutes.

The mailing list service groups subscribers into mailing lists to
receive certain types of messages. There are public mailing lists
available to anyone, and private mailing lists available only to
certain people (for example, AMSAT Board of Directors members or
PACSAT command stations). Currently the following public mailing
lists exist:

ANS AMSAT News Service

This mailing list carries official news releases from
the AMSAT News Service. These messages are posted in
a form suitable for direct posting to a packet radio
BBS system. Each message contains a Bulletin Identifier
(BID), which permits the message to be introduced into
the packet network at many places without resulting in
duplicate bulletins at any BBS. The primary purpose of
this mailing list is to distribute ANS bulletins for
redistribution (via the packet net or on AMSAT voice
nets), but individuals may also subscribe for their own
use. If your local packet BBS doesn't seem to get the
ANS bulletins reliably, you are encouraged to post the
ANS bulletins yourself.

Only authorized AMSAT News Service personnel should
send messages to the ANS mailing list.

AMSAT-BB AMSAT bulletin board

This mailing list carries general AMSAT information.
This information may NOT be suitable in content for
transmission via amateur radio, so automatic reposting
of AMSAT-BB messages to packet radio BBS's is discouraged.
The purpose of this mailing list is to provide a forum
for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list.
Simply address your message to amsat-bb@amsat.org, and
it will be automatically forwarded to all subscribers

to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive

2. Your callsign, if any

3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Conway Yee N2JWQ
yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous FTP from:

ftp://mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/HamRadio/scripts/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my
intent is to make sure it stays that way. For this reason, I have
applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and
is not limited to the US. This reflects the intent to make this
directory universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipg.upenn.edu/pub/yee/uploads/

or via email to yee@mipg.upenn.edu

The data format has not been changed from the old format so
contributions that you were planning to make (prior to my recent
troubles) are still current and most welcome. This repeater listing
will be of use if people take an active part in making it accurate and
useful.

Relayer of Amateur Radio Newsline Bulletins

! The electronic publication of the Amateur Radio Newsline is distributed
! with the permission of Bill Pasternak, WA6ITF, President and Editor of
! Newsline. The text version is edited from the original scripts and
! transcribed from the audio reports by Dale Cary, WD0AKO, and is first
! published in The Radio & Electronics Round Table on the Genie Online
! System.
!
! If you have any comment, suggestion, or news item you would like to submit,
! send them via E-Mail to 3241437@mcimail.com or B.PASTERNAK@genie.geis.com.
! You can contact Newsline at +1 805-296-7180. It is a combination answering
! and FAX machine, if you have a FAX to send, wait for the voice prompt and
! press your fax-send button. Their US Mail address is P.O. Box 463,
! Pasadena, CA 91102 (please enclose a SASE for information by return
! mail).

See the entry for Scott Ehrlich for FTP archive information and
receiving Newsline bulletins via E-mail.
--- 535,587 ----

Relayer of Amateur Radio Newsline Bulletins

! Amateur Radio Newsline is produced as an audio service by Newsline, a
! service of the Westlink Radio Network. The transcribed version is produced
! by Dale Cary, WD0AKO from materials provided by Newsline, and is jointly
! distributed to online services and bulletin board networks by Steve Coletti
! and Dale Cary.
!
! Copyright owner is Newsline. Permission to reuse all or part of either
! this written or the audio form requires that the item be taken in its
! entirety, not be subject to any further editing or commentary, and that
! full credit be given to Newsline as the source.
!
! Permission is granted to all amateurs who want to transmit the audio

! version in its entirety over nets or repeaters. The text version may be
! used for packet distribution as long as it is sent in its entirety and the
! BIN header is kept intact.
!
! NOTICE: When Newsline is transmitted in its full form over voice or
! digital forms of Amateur Radio, it is recommended that the closed circut
! advisory be deleted. Audio, Computer, and Packet retransmissions must be
! made without the editing or deleting of any other part of the Newsline
! content. Unauthorized additional commentary to the original message is
! also prohibited. To do so is a violation of copyright and subjects the
! initiator to legal action by Newsline.
!
! Newsline may also be excerpted for code practice transmissions, and may be
! used as a reference source in bulletin board discussions under acceptable
! Fair Use practices.
!
! Any other use is not allowed without the expressed permission of Newsline.
!
! Editorial comment, news items and all other business should be directed to
! Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.
! E-Mail - 3241437@mcimail.com or B.PASTERNAK@genie.geis.com
! Phone/Fax - +1 805 296-7180, fax senders wait for voice prompt.

Radio Frequency Interference (RFI) matters
Equipment Testing

! I want stories about automotive EMI problems, dealings with dealers,
! and, if possible, solutions. I plan to forward these to my contact at
! the Society of Automotive Engineers (SAE).
!
! If anyone knows the *right* people at any particular company, I want
! to know. I am also pursuing (via the SAE) more official channels.

EMI/RFI Resource List and RFI Tips package available. A business
! SASE with 98 cents postage is appreciated. Electronic versions
! available soon. Please specify the desired documents in your
! correspondence.

The FCC has released the results of a telephone interference survey
just completed.
--- 1083,1111 ----
Radio Frequency Interference (RFI) matters
Equipment Testing

! My survey of automotive EMI problems is mostly complete. The results
! are in September 1994 QST, including warranty and customer service
! information for most automobile manufacturers (many of whom have
! published installation guidelines).
!
! I am also continuing to pursue more formal contacts and standards-making
! through the EMR and EMI Standards Committee of the Society of Automotive
! Engineers (SAE), of which I am a member.
!
! Copies of General Motors installation guidelines are available. Saturn
! allegedly has a video on mobile installation, but none of the dealers
! seem to know about it. I have a call into one of my low friends in high
! places. :-)
!
! If anyone would like a copy of the GM installation guidelines, send a 9X12"
! SASE with two units of postage *and* a specific request for the "GM
! Installation Guidelines" to the ARRL Technical Department Secretary, 225
! Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book
! -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business
! SASE with 98 cents postage is appreciated. Please specify the desired
! documents in your correspondence.

The FCC has released the results of a telephone interference survey
just completed.

WHAT?!?!? You mean to say that when Flight 4184 crashed in the middle of a cornfield on October 31, 1994 the amateur community in Northwest Indiana shouldn't have offered the service of a major repeater with coverage to the crash site and into Chicago to help coordinate supplies and relief efforts to the various stations at and around the site? You mean that countless amateurs shouldn't have volunteered to man communications posts around the clock to help facilitate the cleanup?

I disagree. The amateur radio community can and does provide significant help in these types of situations. No, we are not expected to put out the fires or count the body parts, but we can help.

According to all I've read, the primary eye damage is to the lens via RF heating. The lens coagulates, much like a fried egg, and becomes rigid and cloudy. This leaves you with fixed focus, and very impaired vision.

Glaucoma is the result of excess fluid pressure in the eye, which damages the nerves of the retina. I'm not sure if the causes are known precisely, but I don't think damage to the fluid pressure regulating mechanism has been linked to RF exposure.

I'm very concerned about this topic as well since I also work on "hot" towers and around really high power broadcast transmitters. My focusing ability is impaired, but the lens hasn't become clouded as yet. Focusing ability declines with age naturally, so I'm not sure if RF exposure has had anything to do with my vision problems, but I'm very careful around high RF fields nonetheless.

3412. Computer & RFI / Logging programs?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-01 14:03:27 UTC
From: treit@seanet.com
Message-ID: <treit.61.000E0F2E@seanet.com>
Source record: 255778

Hello

I have a terrible problem with RFI from my radio getting into the computer (and vice-versa). The other night I was calling CQ on 28.111 Mhz and my logging program started to go crazy: the cursor began moving around, switching menus, etc...

Is there a reliable method to killing this kind of interference? Also, I'm looking for a new logging program and want to know what the most popular ones are. I'm currently using Log-EQF on trial, and interested in what else is available. I blew $100 on LogWindows by AEA before discovering it's a terrible logging program. I don't want to make that mistake again.

Any suggestions?

Thanks

-Mike KB7QOP

3413. Re: Speaking with non-English speakers

The best conversations I've had with non-native English speakers are where I speak their language and they speak mine. That way you are always conscious of the communications gap and endeavour to bridge it.

Mind you, by that convention, am I allowed to write British English to Americans?

BTW, How do I distinguish Americans as residents or citizens of the US from Americans as residents of North or South America?

>[Fred Lloyd, AA7BQ Fred.Lloyd@west.sun.com]
>[Sun Microsystems, Systems Engineer]
>[Phoenix, AZ (602) 224-3517]

Fred is right. Reliability theory states
that electronics (solid state devices, of which the 733 is almost
totally comprised, except perhaps for the fan) exhibit a failure
distribution which gives some number of failures in the first
few minutes of operation. This is called infant mortality. If the
device makes it through this period, then statistically, it is likely
to operate almost forever. This is why vendors conduct some kind of
lot acceptance testing. Anytime you buy an electronic device, you
run some limited probability of getting one that fails immediately.
These devices do not "wear out" like your car or your lawnmower, because
the electronics do not exhibit this kind of failure distribution.

My 733 has been working well for about 2 weeks now.

>
>After all, would you really want a "hamamedic" to arrive at
>*your* heart attack?

I think you may have missed the point of this whole thread. The idea of having an "emergency" frequency is not to replace "professional" communications, but to provide hams with a frequency on which they can summon assistance should the need arrive, and be reliably sure that the frequency is being monitored. I don't think anyone is proposing that you grab your HT and summon a "hamamedic" if you're having a heart attack. What's being proposed is similar to the Channel 9 designation in CB, I believe. Fo example, if you're monitoring 146.520 and hear someone calling for assistance in an emergency, you would call the proper authority (police, fire, ambulance, etc.), not respond to the emergency yourself. And, I for one, don't have a cellphone and don't plan to in the near future. But if I'm on a stretch of lonely interstate highway and witness or become involved in an accident, I want to be able to summon help using my radio.

>Amateur radio ought to be used for morale purposes only and
>true emergency communications should be performed by
>trained, responsible professionals using their own frequencies.

I'm still trying to figure out what you mean by "morale purposes".

I am sure all the speakers I use are non-English. They are either Asian
or maybe the ones in my Bose 901's are American but I doubt it. I seem
to have no problem understanding these non-English, I think you might
have a bad amplifier that is causing distortion. ;-)

Your comments are well taken. Note that I take an ICW2A with
the transmit mod with me when I hike with the kids for possible
emergency use, so it's not as if I do not see the potential uses
for amateur equipment for use in an emergency.

But I would not *rely* upon it since no one is responsible for
monitoring or maintaining amateur equipment for guaranteed
emergency response.

I believe a lot of this ARES/RACES activity might be much
better spent in raising money for buying the local police
an extra repeater or helping to hire an extra paramedic or
police officer or fire fighter.

Let the professional's do the real emergency work. Us amateurs
can do the USO-type stuff.

Dear Users,

I am interested in selling my Alinco DJ-580 Hand-Held 2m/440 radio.
For those of you who are not familiar with this radio, it is loaded
with numerous features including subaudible tones, digital squelch and
priority monitoring. It is a fully dual VFO radio that has been configured
to receive down to 110KHz and up to 820MHz. You can even use the radio
as a mini-repeater between 2m and 440.

I have the original box, manual, packing materials, vinyl carrying case,
extra battery, recharger and earphone/mike headset.

I will accept any reasonable bids.

Thanks very much.

If the above reply meant to bring a smile to our stressful life, then
it's funny. If it is just misunderstanding, the subject of discussion
really is non-native English speaking persons. I'm not trying to be PC
here, just to clearify things up since I myself is a "non English speaker".

>practical solution is to adopt a single repeater for a region and use it
>(with the owner/trustees blessing, of course!) We do that here in the south
>bay area and it works VERY well. 73 de Glenn wb6w@netcom.com

Actually, why not do _both_? While I was still in Central TX our
group had a designated (and a known backup) repeater specifically
to handle emergency use (tornado watch/flash floods mostly). But,
we drew up plans to kit up emergency ALERT receivers which certainly
could have been put on 145.695.

The idea (obviously) is that a specific alert call could be made
on the official "alert" frequency and then the actual operating
net take place on the designated emergency repeater for all
the usual reasons one would like to be on a repeater rather than
simplex. Having the alert receiver being different than the actual
net has the added advantage that if you need more ops than you already
have on the 'net, you can go back to the alert call again and perhaps
pick up folks who you missed with the original call.

Sounds like a plan to me :-)

Gary, thanks for the reply. It is now coming back to me...that one of the primary results of high-power RF exposure can be a cataract-like condition of the lens. My opthamologist says my condition is known as "glaucoma pigmentosa", which is where the pigments producing eye color shed internally in the eye and then "clog" up the fluid drains, causing the over pressure condition. He says that the cause of this pigment shedding has yet to be determined, but as I posted previously, perhaps there is some tie-in between RF exposure and the premature (at least in my case) pigment shedding.

There are other causes of glaucoma as well, but this is the only one I am familiar with, since it's what I have.

I got interested in this thread, as I realize that tommorow I have an
appointment with the opthamologist.......

Message-ID: <9412011725.kp17732@SimTel.Coast.NET>
Source record: 255791
Cross-posted to: comp.archives.msdos.announce,rec.radio.amateur.digital.misc,rec.radio.amateur.misc

I have uploaded to SimTel, the Coast to Coast Software Repository (tm),
(available by anonymous ftp from the primary mirror site OAK.Oakland.Edu
and its mirrors):

SimTel/msdos/packet/
aprs62a.zip Hams: Automatic Packet Reporting System (APRS)

APRS can be summed up with two concepts, REAL-TIME PACKET TACTICAL
COMMUNICATIONS and MAPS. Probably 98% of APRS potential does not need
GPS or any tracking devices. Think of APRS as just a multi-user
distributed packet network with a MAP display for many exciting amateur
applications:

Network topology monitoring Direction Finding
weather reporting DX cluster monitoring
AMSAT ground station tracker Satellite tracker (future)
boat/mobile/RV tracker Special event tracker/organizer
Local area CHAT mode HF DX plotter
RF path estimating Search and Rescue
Frequency Coordination database

APRS nets are springing up nation wide on the experimental two-meter
frequency of 145.79 MHz and on the HF frequency of 10.1515 LSB for
vehicle tracking and SKYwarn applications,

aprs62a.zip is the latest version (as of 28 November 94) of APRS, and
contains all files. It replaces all previous versions and fixes a bug
in aprs62 that prevented turning off weather alarms.

3425. Re: Emergency Frequencies

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-01 17:36:04 UTC
From: n9315@pnet16.navy.mil
Message-ID: <D057K5.A8H@nctams1.uucp>
Source record: 255797

Selecting a repeater for emergency comms in a given area is great for those who frequent the area and are aware of it. However, it doesn't do much for those who are visting/passing through the area, as they probably aren't aware of the freq used.

I think the proposal of using 146.52 simplex, being monitored at various times (as stated in the listed article) is the best way to get almost nationwide coverage. Add it to your scanner.

> ... too simple???

I gotta cast my vote with the chap who said that most of us don't listen to a frequency we don't intend to use. I tend to monitor only our club's repeater when at home, and only those repeaters along my route when I'm driving. Must have been six months since I listened to 146.52. And this pattern seems to be prevalent in the Northeast.

3427. AMATEUR NEEDS YOUR HELP!!

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-01 18:10:02 UTC
From: luecke@aol.com
Message-ID: <3bl3hq$8f@newsbf01.news.aol.com>
Source record: 255867

N3TCE AMATEUR OPERATOR NEEDS YOUR HELP!:
==========

Thank you for taking time to read this important message. My name is Craig Luecke. I currently am a resident in a single family home development named New Market West in New Market, Maryland. I have lived in this community for 4 years and moved in during the initial phases of construction.

I installed a small Radio Shack discone antenna (height 2') onto a vent pipe on the rear of my home, with the elements of the antenna almost touching the shingles of the roof. This antenna cannot be seen from the front of the house and is very discreetly installed. This installation took place 3.5 years ago, my neighbors did not even know it existed until 2 months ago!

With the help of this little discone antenna, the following benefits to the community have come about:

1. Vandalism has dramatically decreased by my solo efforts in a Community Watch using my HT remote to my home base to obtain phone patch and other links to law enforcement and county related agencieswhile on foot patrol.
2. An arson attempt to newly installed community playground equipment, trash cans, and brush was successfully halted by use of the same procedure as listed above.
3. I am a member of the Federal Emergency Management Agencies new Urban Search & Rescue Team - Task Force VA-1. All of my packet gear is portable and will be used if FEMA is deployed by the President to any disaster. This will provide the amateur community welfare traffic direct from the heart of the command post of a disaster.
4. I am trained as part of the National Weather Service SKYWARN system (ID: FKS04) and with my current station configuration can contact the Bluemont, VA repeater (147.300) where the NOAA directly takes sighting information.
5. I am a career firefighter/paramedic assigned to the Hazardous Materials Response Team

with the Fairfax County Fire & Rescue Department, Fairfax, Virginia. The training and
technology knowledge of amateur radio has enhanced services and operational changes that
are provided to tax paying citizens.
6. I have documented contacting, assisting and QSLing over 40 public schools in North
America using packet radio to help in the education of students about all of the advantages of
amateur radio and it's related technologies.
7. Providing a link for neighborhood children to participate in the Santa-Net which occurs
every Christmas Eve in the Mid-Atlantic states. This net allows children to speak with Santa
Claus via amateur radio.

The new rules and regulations that are being put into place in our community will successfully
FULLY shut down N3TCE in both voice and packet transmissions. The new rule will state as
follows:"No outside or attic mounted television aerial or radio antennas or other aerial or antenna
for either reception or transmission, including, but not limited to, satellite disk antennae, shall be
permitted upon the property or the exterior of the home." No antenna restrictions were disclosed
in the covenants at the time of the purchase of the home. By not allowing even an antenna in my
attic will keep transmissions from connecting with even the closest repeater. The reason for this
is my home has aluminum siding which is completely blocking reception and transmissions.

I am asking for your help! There is some support in the community for me to leave the antenna
in place and to allow exemption. However, members of the committee imposing this new rule
want to enforce it no matter what the home-owners say.

Please help by doing any of the following items:
1. Send a postal letter to:
New Market West HOA
c/o Property Management People, INC
5 North Bentz Street
Frederick, Maryland 21701
or call Patty Stevens: 301-694-6900 ext 111
2. Send a PACKET message to me and I will relay it via fax to the management company or
fax direct at 301-694-9514.
3. If you are part of an amateur radio club, I would love to receive club resolutions in the form of

a letter backing my antenna.
4. Please re-post this message everywhere you can, local bbs's, packet bbs's, club newsletters,
online services, etc.

I will be forever if your debt should you decide to assist me in this fight. It is not an impossible
dream and through your support I can receive a waiver that will benefit the community, the
amateur radio community and possibly someday even your area should a disaster occur.

73's to all and Happy Holidays!

Jeff, are you a VE? Compare the 20 seconds or so it takes to slap an answer template over the answer sheet and count the unmarked holes, with the time it would take to actually _read_ the answer, decide whether it met the criterion for being correct, and then arguing with each and every examinee over every wrong answer.

I guarantee that I wouldn't participate in the VE program were the exams to require essays.

You're right that multiple-choice exams do not thoroughly explore the comprehension of the examinee. But they do test for a certain level of knowledge (or memorization), and therefore seem a reasonable compromise.

Inconsistently, I do not feel that way about the multiple-choice code test, having seen an applicant pass one without copying a single character!

The FCC amateur database is public domain. I recently changed my address
on my
FCC license (and _only_ on my FCC license) to my presently
temporary-but-soon-to-be-permanent, second residence. I just got a
duplicate, complementary copy of WorldRadio at the new address.

3430. Re: Vanity call fee

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-01 18:27:56 UTC
From: lakeith@robins.af.mil
Message-ID: <3bl4jc$mv5@wrdis02.robins.af.mil>
Source record: 255858

: :Bill Hindin (bildin@dorsai.org) wrote:
: : I am very troubled by the proposed Vanity call fee. Recently, a member of
: : our ARRL representation for SE NY told us at a club meeting that the ARRL
: : supports the proposed lifetime fee of $150.00. He also told us that the
: : actual processing cost is only $7.00! The OMB sets the fee and when asked
: : in a letter to the ARRL, Steve Ford replied that the ARRL supports this
: : fee for a number of rather weak reasons. I thought that the ARRL
: : represents our interests! How do others feel about this high fee and the
: : ARRL's position?
: : 73 de AA2TF

Two points:

1. I believe the ARRL position to be valid. The original FCC position
was to charge $70 each license term (10 years). The ARRL supports a
one-time fee. Sounds like they are representing our interests to me!

2. As for the "high fee," why is $150 high? If I wanted a particular
callsign, I think $150 is cheap. If I want vanity auto license
plates, in this state, I would pay $35 per year.. Remember, you do not
have to pay it. It is an optional item.

73,

Larry, KQ4BY

3431. The end of ham radio (Was: Re: HAM Frequency Allocations)

Wow. I thought that the amateur radio service was supposed to support emergency communications. I thought that hams were supposed to respond to emergency situations with the capabilities in which they have trained themselves. I thought that ham radio was something more than just incessant prattle about the weather, the new rig, and the HF conditions. Maybe I ought to reconsider amateur radio altogether.

Its curious. I have been following a discussion in rec.backcountry on this very same topic. The concensus over there is the same. Want help in a remote location? Get a cell phone. Several hams, myself included, have injected our thoughts into this discussion, but alas...

Folks, if this is the real answer, you can kiss amateur radio goodbye.

The cellphone industry swings a big hammer, and its getting bigger every day. They are going to want the frequencies now allocated to amateur, and we will be left out unless we can address this sort of issue. Ask yourself - why ham radio? Cause its fun? Sell this to the FCC, and you won't get one single hertz for ham radio.

We better get our act together, and provide this kind of service, or we will see the end of UHF/VHF amateur radio very soon. The highly paid cellphone lobbyists will remove our rights in a very organized, thorough, and well financed fashion and never feel any remorse.

|>
|> Because the unbridled masses are crying for less taxation without a
|> reduction in services, many gov. agencies are finding new
|> commercial-like revenue streams... Seems like we should be cheering
|> them on, not whining about not getting something for next to nothing...
|> Bye... Ted..

Here we go again. The FCC does not get to keep or spend any of the money
that comes into it as fees. All that money goes into the general fund and
it's allocation is handled by Congress. Now, knowing that none of the money
that hams pay to get these vanity callsigns are going to go to actually helping
police or improve the Amateur Service, do you still think it's reasonable??

Numerous hams here have repeatedly stated the fact that they have no objection
to fees, even for their basic license, if those fees would be used by the FCC
for the improvement or maintenance of the Amateur Service, but would you still
be willing if you knew that your license fee could just as easily be used to
fund a service that is going to grab it's spectrum from the Amateur allocations
(like the recent 220 debacle.)

This is yet another case of the ARRL supporting some agenda other than the good
of the Amateur Service in general.

Hey,

I've heard about the RS 2m aplifier - am thinking about purchasing it for home/mobile use. Could anyone please tell me what I'd need to do [buya power supply for the house and install something in my car] that would allow my to use the amp in both locations with some degree of convenience? Thanx bunches....

Also - for any antenna gurus - for home use, I usually need to stay near a window to get any sort of signal out - what's the story with a J-pole antenna - how does it work, and will it alleviate my problem?

Thanx in advance,

3435. Re: Emergency Frequencies

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-01 19:03:00 UTC
From: jeffrey@kahuna.tmc.edu
Message-ID: <D05BL0.IDM@news.hawaii.edu>
Source record: 255869

Back in the days of crystal controlled 2M rigs, every rig came with 146.94 simplex, and .34/.94 crystals. .94 was supposed to be the national calling frequency as an aid to travelers. Since the number of crystals/channels a set could have was limited it was seen as a necessity to have a national channel (not to mention the $10 per crystal factor!).

Somehow, .34/.94 got eaten up as a standard repeater pair.

3436. GB2RS News 4th December 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-01 19:07:56 UTC
From: dave@llondel.demon.co.uk
Message-ID: <786334076snx@llondel.demon.co.uk>
Source record: 255862
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 4th of December and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The Radiocommunications Agency has announced that, in certain cases, they will be publishing details of those whose amateur licences have been revoked,. Until now, the RA has regarded licence details as confidential between the itself and the licensee. This has made it appear that the Agency has been too lenient with offenders. The decision to publish will be based on the consideration that it is important to make other licensees aware of the revocation of a licence, and the ensuing ban on radio use for the person concerned. This outweighs the normal rule that information about licensees should be regarded as private.

The RSGB QSL Sub-Manager for the G3TAA - TZZ callsign series, Mr J Taylor, G0RFN, has moved house. His new address is: 121 Garesfield Gardens, Burnopfield, Newcastle Upon Tyne NE16 6LQ.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Canada, the special callsign VA1S will be aired through the month of December from Cape Breton Island. Operation will be carried out by members of the Marconi Amateur Wireless Club of Sydney, Nova Scotia, on 160 to 10 metres, CW and SSB.

From Turks and Caicos, JA1FUI will be active as VP5/JA1FUI from VP5JM's QTH from now until Wednesday the 7th of December. Operation will be on all bands, SSB and CW, but especially on 20, 30 and 40 metres.

From Barbados, KU9C and K2PF will sign 8P9GD and 8P9GE respectively from next Thursday the 8th, until Monday the 12th of December.

Now the Rally News, and we know of no events for today Sunday the 4th of December. Note that the Leeds and District Amateur Radio Society Christmas Rally, scheduled for today has being cancelled.

The only rally we know of for next Sunday the 11th of December is the Verulam Amateur Radio Club Rally which is to be held at the Watford Leisure Centre, Horseshoe Lane, Garston, Watford. Doors open at 10am. The event features a bring and buy stall, and a grand raffle. Refreshments will be available and talk-in will be on 2 metres, channel S22. Details from Walter, G3PMF on 01923 262180.

Now for the HF contest news:

The ARRL 10 metre Contest takes place next weekend from 0001 UTC on Saturday the 10th, until 2359 UTC on Sunday the 11th of December. See December's edition of Radio Communication, page 19 for further details.

Next some VHF contest news:

The RSGB 144MHz AFS, Fixed and SWL Contest takes place today Sunday the 4th from 0900 to 1700 UTC. For further details see November RadCom page 78

The last event in the RSGB 1.3GHz and 2.3GHz Cumulative Contest takes place tomorrow, Monday the 5th of December, from 2030 to 2300 UTC. For details of both of these cumulative contests, see July RadCom page 82.

And now the solar factual data:

Unfortunately no data has been received from Meudon since the 18th of October, and to add to the woe both NOAA satellites, 6 and 7, have also had computer trouble. We have been assured that by the 30th of November all should be back to normal.

From the data we have for the period 21st to the 27th November, there was a steady increase in sunspot counts, with some B class flare activity mainly towards the end of the period. As forecast last week, geomagnetic levels were very quiet up to the 25th, but then increased to 'substorm' levels. The sunspot indices increased throughout the period from 11 on the 21st, up to 42 by the 26th, with the mean being 27. Solar flux levels averaged 79 units for the period, but increased from 76 units on the 22nd to peak at 83 units by the 26th. The x-ray flux also increased with several C and B class flares, the biggest being a B8.7/SF on the 26th. Flaring continued on the 27th. Surprisingly the electron fluence levels declined from high to normal by the 26th. The 90 day solar flux averaged 83 units on the 27th. The x-ray flux levels increased from a low of A1.9 units up to A6.4 units by the 26th, with the period averaging at A3.0 units.

Geomagnetic activity was very quiet. It was down to an Ap of only 3 units on the 23rd and 25th, but the increase in flare and flux activity, together with the passage of a coronal hole, produced a considerable increase in the geomagnetic levels during the morning of the 26th, when a sudden storm commencement began. This pushed the index up to 7 for 6 hours. The Ap index on the 26th reached 39 units, and on the 27th 25 units, This was rather unfortunate for those taking part in the CQ Worldwide DX CW contest. The period averaged an Ap of 13 units The state had been 'nil, nothing to report' up to the 25 then 'mag alert'. The aa indices, as reported by the British Geological Survey, for the period 8th to the 14th of November were mainly quiet and averaged 17.9 nanoTeslas, about K2. The 9th was the only disturbed day with a level of 29.9 nanoTeslas.

I'll repeat the figures: Spots - 27, Flux -79, Ap index -13, x-ray flux - A3.0.

Due to the breakdown in information, we have no ionospheric data. However the Geminids meteor shower is due to start on the 7th of December and continue through to the 16th. It is expected to peak just before dawn on the 14th. The radiant lies near Castor in Gemini, low down in the north eastern sky.

The Ulysses space craft which is probing the sun's magnetic fields, completed its pass of the sun's southern polar region on the 5th of November. First reports state that the spacecraft did not find any magnetic poles, just a uniform field.

And lastly the solar forecast:

This week the quiet side of the sun should be looking our way; solar flux levels are expected to decline to the mid 70s. Little flare activity is expected. Geomagnetic levels are expected to be mostly quiet to just unsettled. Based on past history, ionospheric MUFs, during daylight are expected to be about 25MHz hours in the south and 21MHz in the north. Darkness hours are expected to reach about 10MHz on north/south paths, with east/west paths being about 7MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G 0 Victor Mike and G 7 Tango Whiskey series, and Novice calls in the 2 0 Alpha Juliet and 2 1 Delta Oscar series.

Hello again:

I was unaware of 146.520 so I will check out this frequency, maybe it
can meet my needs in the future. However, to get back to emergency
transmissions I don't see where police couldn't have a repeater to
monitor this frequency. Why be forced to get a cell phone? If you
were dieing would you really say. "Sir don't use that radio, I would
prefer dieing before you use that ham radio". After all, isn't one
of the pluses of having ham operators out in the world is that they
assist in emergencies??? Now, I understand that it might be a money
issue, well I can't argue with that; but, assuming hams would assist
in setting a network like this up for Police (if they so desired)
what could be wrong with this idea? I am not trying to start an argument
like some people tend to drive this issue only to provide a suggestion.

Doc Elliott (helliott@losat.redstone.army.mil) wrote:

: Wow. I thought that the amateur radio service was supposed to support
: emergency communications. I thought that hams were supposed to respond
: to emergency situations with the capabilities in which they have
: trained themselves. I thought that ham radio was something more than

Amateurs (not all of them mind you) are notoriously UNreliable in
checking in, maintaining equipment, staying fit, and the other
basic necessities of true emergency workers. Nor do they have
any responsibility since they are not employed or sworn to their
duty.

Sure. I don't mind the good old boys from helping out, even in
a bumbling, inept kind of way. But I sure don't fantasize that
our nation *depends* upon amateurs for anything other than
the "home guard": those old codgers in WWII who donned army gear to search
the skies for invaders. It keeps them busy and feeling useful.

: just incessant prattle about the weather, the new rig, and the HF
: conditions. Maybe I ought to reconsider amateur radio altogether.

Amateur radio is what you want to make of it. I like to seek out
other amateurs for spirited discussions, but if you want to talk about
s-lines and the evils of "rice boxes", then more power to you.

: Its curious. I have been following a discussion in rec.backcountry on
: this very same topic. The concensus over there is the same. Want
: help in a remote location? Get a cell phone. Several hams, myself
: included, have injected our thoughts into this discussion, but alas...

I carry a modified ICW2A with a twin lead j-pole. If I weren't able
to modify the radio to transmit out-of-band, i.e, on national park
service repeaters, coast guard, public safety, dept of agriculture,
etc. repeaters, then I wouldn't bother. Amateur repeaters are just
too unreliable to depend on in case of emergency.

: Folks, if this is the real answer, you can kiss amateur radio goodbye.

Nope. Admitting it is a pure hobby and not staying preoccupied with
the historical roles that the amateur service has played using
morse, traffic handling, disaster communications and so on just
makes the fun more real to me. Amateur radio is all about fellowship
and wireless communication, not about modes, the ARRL, ARES/RACES,
your local repeater...

: The cellphone industry swings a big hammer, and its getting bigger
: every day. They are going to want the frequencies now allocated to
: amateur, and we will be left out unless we can address this sort of
: issue. Ask yourself - why ham radio? Cause its fun? Sell this to the
: FCC, and you won't get one single hertz for ham radio.

This sounds like "special pleading" to me. Exactly why should the
amateur service retain or expand its frequency allocations if
the private or government sectors make demonstrably better
use of them through dependable, responsible public safety, spread
spectrum and trunked mutiplexing, hi speed digital modes, and so on?

Umm 146.52?

>

In QST the Wilderness Protocol was introduced (not officially). Many
responses were favorable. I feel that the proposed system is logical and
should be used. It is a protocol that asks people to monitor from 0700
to 1900 on the hour every 3 hours for 5min on the national calling.

My family and I follow the protocol everytime we are out and about in the
mountains. We have very good repeater coverage in the Washington state
area so all one needs to do is get up near the top of a ridge and run
through the repeaters. You are almost assured atleast one repeater hit.
We monitor the protocol though for those in the valleys bellow.

> 73 es GM from Jeff

One big reason that more police don't have amateur radios is because it would be ILLEGAL for them to respond on the amateur bands, since that would be a part of their job function that they're getting paid for. Our local ARES (and I'm quite sure, others') has to man the weather service's radios from the amateur on-call group for just this reason, even though most of the weather service's staff are amateurs themselves.

Police could listen, but I wouldn't feel too well about making a call for help and not knowing whether it was received or not.

TRW is the last saturday of every month, in the parking lot on the
northwest corner of Aviation Bl (runs N-S) and Marine (E-W).
Starts about 7ish, and ends about 11ish.
Ham radio and computer stuff only. They hassled me when I had two
table lamps behind the 6 boxes of old chip, printer and two-way manuals.

There is also one on the 2nd saturday in the Fontana area (San Bernadino
county), but I haven't got the details.

In article <gradyD043zw.2Fs@netcom.com>, grady@netcom.com (Grady Ward) writes:

My vote is to never use 146.52 for an emergency but use a cellphone or professional communications network only for such a situation.

The only time amateur radio ought to be used for an *emergency* is when the FCC *declares* one.

Amateur radio ought to be used for morale purposes only and true emergency communications should be performed by trained, responsible professionals using their own frequencies.

After all, would you really want a "hamamedic" to arrive at *your* heart attack?

^^

Well I really don't agree at all with your interpretation of your use of ham radio. The term "emergency" did not imply national disaster but a very urgent personal situation in which life or property was threatened.

I know I would feel better having more than one option to summon aid. I have a cell phone in my truck as well as the ham gear. I have had more opportunities when the cell was marginal and the phone was of little use. The ham gear has never let me down. I even take along a CB radio with a mobile mount antenna on long trips.

I can't see any reason why hams can't assist other hams by summoning the proper authorities to a scene of an "emergency" (see above definition ;-)). I would also appreciate a ride to the gas station by a friendly ham. And I sure wouldn't turn down the "hamamedic's" services if the ham just happened to be a doctor. That's the beauty of this hobby - the co-operation and goodwill of other hams.

- Rob, N1NTE
(I'll still be listening to 146.520 so that hams in my neck of the woods have that "cell phone" alternative!)

3451. FCC Commercial License

It's spelled:

```
# # ##### ####### # # ##### #######
# # # # # ## # # #
# # # ###### # # # ##### ######
# # # # # # # # #
# # # # # # ## # # #
####### # ##### ####### # # ##### #######
```

Or as the Brits spell it,

```
# # ##### ####### # # ##### #######
# # # # # ## # # # #
# # # ###### # # # # ######
# # # # # # # # #
# # # # # # ## # # #
####### # ##### ####### # # ##### #######
```

Golly, you'd think hams would learn how to properly spell something they value so much. Or at least hike it out of their wallets and look at it.

Observed
DATE T-index MUFs at Sydney
01 Dec 6 near predicted to slightly depressed at times during
local night.

Predicted Monthly T-index for December: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
02 Dec 0 About 10% below predicted monthly values
03 Dec 0 About 10% below predicted monthly values
04 Dec 15 Near predicted monthly values
COMMENT: IPS HF Communications Warning 12 was issued on 28 November
and is current for interval 2-3 December. Blanketing sporadic E were
observed at 03 and 19UT at Sydney, depressed conditions of up to
20-30% were observed at Townsville at times yesterday.

Okay what if you don't have access to a cellphone? What then?
It's comments like this that help to yank some of our freq. priveleges
away from us! HAM radio is for emergency use first and foremost. (Been
a few years since you took the test huh?) Unfortunately the technology
has passed us up on handling emergency traffic as well as some of the
other groups out there but we still have a place. During an earthquake
HAM radio may be the only way to pass health and welfare messages out
of the disaster area. Try passing those messages out of the area and
you get to see how busy that will keep you. Cell phones have their
place and it is a shame that some HAMs have to resort to that to get
an emergency traffic out. But there are quite a lot of people that do
not have a cell phone and probably won't get one anytime soon because
of price, you could buy a HAM radio for that and not have to pay
for airtime!
I monitor 146.520 a lot, and it is the first memory in my radio
and scanner.

> Amateur radio ought to be used for morale purposes only and
> true emergency communications should be performed by
> trained, responsible professionals using their own frequencies.

Would you refuse to help someone having a heart-attack simply
because "Someone ELSE could call 911, and someone ELSE could help
them"? That doesn't seem like a very HAM-like attitude. But to each
his own I guess.
>
> After all, would you really want a "hamamedic" to arrive at
> *your* heart attack?
I resent that, no wait I don't. I guess you'd call me a HAM
Medical Technician. A HMT for short. There are a few of us around.
Licensed Emergency Medical Technicians with HAM licenses. A EMT No
Code sort of speak! hi hi

You're in the West Coast area. So am I. I'm KE6EBA, and if your
ever in the Kern county area and got a flat or something, give me a
holler on 146.520 or 146.580 (both simplex) and someone will be more
than happy to help. (Might be me too!)

Standing 500Khz watches aboard ship, we would always have to log NO SIGS
every 5 minutes. Every once in a while, I would hear `NO SIGS' in the
ether.

>From: thugwold@netcom.com (Mike Stute)
>Subject: Hallicrafters S-20-R For Sale
>This ham transmitter/receiver is in excellent cosmetic and functional
>shape. i am not a ham, but a friend checked it out. i have used to

My first RECEIVER as a novice in 1962 was a Hallicrafters S-20R, also marketted under the name Sky Champion. However, it is a general coverage RECEIVER, not a transmitter. The RECEIVE/SEND switch simply kills the B+ to the tubes. Before the days of transceivers, you would switch your receiver to the SEND position so the transmitter would not overload and/or cause damage to the receiver while transmitting. The SEND switch is thus a MUTE function, not implying a transmitter is also inside.

It is a mistake often made. This is not a flame, just pointing out how many older receivers are often mistakenly assumed to be a transmitter due to the SEND switch. The S-20R was sold during the early 1940's (WW-II).

3461. Help with dead Yaesu 5200

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-02 00:40:02 UTC
From: dj1@vax1.mankato.msus.edu
Message-ID: <1994Dec1.194002.1@vax1.mankato.msus.edu>
Source record: 255822

Hello, I am having difficulty with my Yaesu 5200. My power supply went over voltage and now the unit will now power up at all. When power is applied the fuse in the negative leg will blow. I have totally disassembled the unit and now just have the main board in my hands. It still presents a dead short across the power in leads. I have looked for the obvious and do not see anything that looks suspicious. I don't have any manuals or other helpful documentation so I am looking for those that do. It there any protection built into the unit such that it would blow and short to protect its self?

If you have any ideas I would really appreciate it. Funds are a little tight being in school and I would like to avoid service charges if possible. [sigh..] You can contact me here at DJ1 @ VAX1.MANKATO.MSUS.EDU. Any help that you can offer would be greatly appreciated. Thanks!

The old WB4VVN Accu-keyer can easily be beaten. I've built on, it is an OK keyer. The CMOS Super Keyer II project from a few years ago is certainly easier to build and, when it is all added up, a much better value for the money. The unavailability of the CPU source code makes you completely dependent on vendors of the programmed 68HC705, though.

Next best is probably a keyer built around a Curtis 8044ABM. Nice, easy to use, doesn't have memories but it is probably more rugged than a Super Keyer II.

This is, of course, assuming you want to build a keyer. Years ago I bought a cheap MFJ based on a Curtis 8044. Works great, more functional than the Accu-Keyer at a fraction the power consumption (though I guess you could build a 74HC version of the Accu-keyer).

>a bumbling, inept kind of way.

Gee Grady, eat a few prunes - you'll feel better.

I've read your other articles and I have reached the conclusion
that you must be lucky enough to live in an area where no natural
disasters take place. For, when a widespread disaster occures
the local professional services are overwhelmed and rely heavily
upon volunteers. A good many federal/state/county/city services
include the amateur radio service in their emergency planning for good
reasons. Examples: California Department of Forestry/Fire Protection,
Los Angeles County Sheriff's Office, California Office of Emergency
Services, Hawaii State Civil Defense, Honolulu County Civil Defense,
National Weather Service; those on here from the southern states
which get hit by hurricanes each year can surely list even more
government services which depend heavily upon amateurs.

Here is a specific example: In October 1992 the island of Kauai
(Kauai County) took a direct hit from a catagory 5 hurricane.
50% of the island was distroyed. For several days the only
communications between Kauai County and the rest of the state
were provided by amateurs. All logistics and medical comms were
handled by hams; a ham station was set up in the governor's office
(of course, amateur equipment is perminently installed in all
county and state emergency operating centers; the governor on Oahu
wanted a direct `hot line' with the mayor of Kauai - that hot line was
2M). Hams were placed in fire stations and in police cars since
the county's radio systems were distroyed. And guess who reinstalled
the state's microwave link between Kauai and Oahu counties?

Let's hear from those in the mid-West who work jointly with the
National Weather Service as tornado spotters.

Take a tour of the National Hurricane Center in Florida - you'll
see a perminent amateur radio installation.

Those in Southern California can provide plenty of stories of the roles hams played as they worked with government agencies during the aftermath of the earthquake.

One wonders why you're so sour about hams being volunteer communicators. Hopefully the prunes will help (no more than 6 now).

Golly Bill...

So, the federal government is run on a general fund system. So what??? The machinations that really shape policy and expenditure are far murkier than you or I would want to be a part of. I applaud any inovative means by which a gov. organization more directly raises some funds.

Like suckling sheep, us common folk decry the pennies spent on social programs, while we kowtow to massive graft and corruption covered by the veil of "national security" or "corporate support". And since conservatives benefit so well from the entitlement programs that liberals so poorly design, there is no conservative groundswell to reduce them. It is always just another case of "We have met the enemy and he is us..."

The only thing that protects any rights or privileges we may enjoy is the loud and proud public expression of them. If amateurs want to preserve their bandwidth and expand their privileges, they must use the only tools available to every citizen. These are a showing of elective power or the threat of unleashing public shame.... A public official will do anything to gain the first or anything to avoid the second. Bye... Ted..

I travel to Europe often and want to take my 2m HT. But I notice that the
Euro specs and features are different from our US units. Besides AC220v of
course, there is the 1750Hz tone, and step and range differences.
Can someone explain the whats and whys and if there are others?
Then, of course, there is the license thing as well!

thanks

pls rply to lwallyci@onramp.net

From: rweigand@montana.win.net
Message-ID: <83@montana.win.net>
Source record: 255735

Aloha, I'm interested in making my packet station portable. I'd like to hear from anyone who's tried this.

I have a 386 Notebook PC, a KAM and a 2m Handheld. I'm not looking to spend very much more...at least not for the equipment...but, could be persuaded if there's good reason.

It seems to me the biggest problem is finding a suitcase made of the right materials. I would like this to be a professional looking system...and would also like to be able to travel with it & get on the air without a great deal of set-up time. I've seen some of the halaburton (sp?) cases for tools and they look real neat. Here in Hawaii I don't have access to much surplus stuff...so any recommendations would be mucho appreciated.

Thanks, Rich/AH6MC

Hey TC2 Jeffrey - this here is RM1 Jeffrey! I would avoid having to type those NO SIGS entries during the slow periods by sending GE, which would be followed by a dozen other GE's. But I never thought of actually *sending* `NO SIGS' - what a laugh! I wonder from which CG unit that came from?

> I can use a US call.

Nope. To get a US call you'll need to take the US tests. By filling out and sending a Form 610A to the FCC you'll be able to get an 'Alien's Permit' which will be good for one year and is free of charge, but you'll still need a US mailing address.

A CEPT licence (currently) means slightly less to the FCC than the label from a baked bean can.

> I see there might be a problem as the USA code requirement is 13wpm whereas
> ours is 12 wpm.

Actually, this doesn't seem to be *any* kind of problem. In return for a correctly completed form, the FCC will issue an Aliens Permit to the holder of any valid UK licence; but realise that, operating under a reciprocal agreement, you'll be bound by the modes/powers/frequency allocations which apply to your UK licence where these are fewer/lower/narrower than those of the country you're visiting.

The final solution would be to sit down and take the US tests at one of the (regular) sessions held in the UK; for a modest fee ($5.75 equivalent this year, $5.92 equivalent next) you'll be in a position to get a US call and licence (fee on issue $0.00) valid for 10 years.

This kindof makes you wonder how the information is set up. Does the FCC have a flag in their system that says that a particular record has changed and these marketers are basing their mail/no mail decision on this?

I joined the ARRL in February of this year. My first license was No-Code Tech. I then upgraded to Tech-Plus, Advanced and then Extra. After each change hit the FCC database I received promo mailings from the ARRL (why don't you join us now?), World Radio, Radio Fun, and complimentary copies of most mail order catalogs. Wouldn't you think that they would run a check to see if a mailing has already been done, or if the person is already a member/subscriber?

Oh, well, it keeps the recyclers busy.

DX Bulletin 72 ARLD072
From ARRL Headquarters
Newington CT December 1, 1994
To all radio amateurs

SB DX ARL ARLD072
ARLD072 DX news

The items in this week's bulletin are courtesy of Tedd, KB8NW, Steve, KU9C, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral Column from the pages of QST magazine. Thanks.

UNITED ARAB EMIRATES. The PTT has approved three more licensees, all graduates of a recent training session at Dubai Men's Technical College. Listen for newcomers A61AH, A61AI and A61AN.

ANTARCTICA. Eddie, VK4EET, is operating as VI0ANT and is expected to be stationed there through March. Listen for him between 1130 to 1630z, primarily on CW, though he does operate some SSB. RTTY and AMTOR contacts are available on request. Try 3502, 7005, 14005 and 21005 kHz for CW, and 3798, 7070, 14190 and 21295 kHz for SSB. QSL via VK4EET. Others are also active. Phil, VK4FPS, is on as VK0FPS with SSB and digital modes. QSL via VK3MA. Lances, VK7ERZ, is on as VK0ERZ with casual SSB ragchews.

CHATHAM ISLAND. Listen for the CW of Ron, ZL1AMO, between December 10 and 20. Though primarily a CW op, he will also operate some SSB and RTTY.

MALDIVES ISLAND. Tom, DL7UTM, aka H44XO, 3D2XO, T21XO and Y31XO, will be signing 8Q7XO between Christmas and year end.

MALTA. Birgit, DL7VTZ, and Holgert, DL7VTM, who were 9I2M and 9I2Z earlier this year, are planning to operate from Malta for two weeks sometime in March 1995.

BARBADOS. Marian, KB9EKO, and Myron, K9JJR, should be on the air soon and be active through December 12. Listen for 8P9CT and 8P9DC. Steve, KU9C, and Ralph, K2PF, will be signing 8P9GD and 8P9GE, respectively, while vacationing December 8 through 12. They also

plan to be active in the ARRL 10 Meter Contest. QSL via their home calls.

THIS WEEKEND ON THE RADIO. The ARRL 160 Meter Contest will warm up The Top Band this weekend. It runs from 2200z December 2 until 1600z December 4. W/VE stations send signal report and ARRL/RAC Section for the exchange. DX stations send signal report. If maritime or aeronautical mobile, sent ITU Region. For full contest rules, see page 131 of November QST.

TOPS is an international club founded in Great Britain for CW enthusiasts. The TOPS Activity Contest on 3.5 MHz CW is from 1800z December 3 to 1800z December 4. Limit operating to the 3510 to 3560 kHz segment. Listen for stations calling CQ TAC or CQ QMF. Exchange signal report and serial number. TOPS members will also give their membership numbers. Logs go to OE1TKW and are due January 31, 1995. For more information on TOPS contact G3AWR.

I assume that by "/frequency allocations" and "/narrower" you do _not_ mean that
where a UK band is narrower than a US band (like two metres) the "alien" has to
restrict himself to the part allowed in uk?

In a CW pileup or weak signal environment, K is not a good last letter
for a call sign, it can be confused for the prosign "over". There is
one very active CW op I know who has been almost forced into adding
"di-dah-di-dah-dit" frequently after his call (which ends in K) to avoid
confusion.

3489. Is Somebody Selling Ham Mailing Lists?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-02 16:13:04 UTC
From: William_A._Kirsanoff@ccmail.anatcp.rockwell.COM
Message-ID: <9411027863.AA786384912@smtpgty.anatcp.rockwell.com>
Source record: 255818

Darrell (NR3Y) <dearnshaw@worldbank.org> writes:

I'm curious, and a little more than perplexed. I have recently changed address, and I have suddenly started to receive complimentary copies of a Ham Trader magazine in the mail. The mail is addressed correctly, including my new address and my callsign. When I called the publishing company and asked where they got my name and address from, they initially claimed it was the Callbook, or the FCC listings - wrong! I haven't notified the FCC of my change of address yet. In fact, the only radio-related organizations that I've notified is the ARRL, the RSGB and Worldradio Magazine. I also updated the local packetcluster with my new address.

I'm not acusing the League (or anyone else) of selling the information, because I simply don't know where the information came from. Has anybody else suddenly started receiving copies of this publication, and if so, do they know how the publishers got their name and address?

Granted, this is not an earth-shattering disaster, but it is another example of personal privacy being eroded away.

ps. For peace of mind, it would be nice if the ARRL could reassure its membership that it does not (or will not) get into the insidious practice of selling its membership list.

Well Darrell, to answer the question in the subject line: Yes, everybody is selling ham mailing lists (well, almost). The buying and selling of mailing lists has become a major industry. Actually, they are usually leased rather than sold. Most membership organizations like ARRL allow their members to indicate if they do NOT want their address made available in this manner. I believe ARRL has a check-off on their renewal forms for this. Believe it or not, many members of various special interest organizations consider it a BENEFIT to get mailings targeted to their interest this way. Public records like the FCC database remain as sources however, so you can't really avoid the junk mail forever.

If you don't want the mail, say so. Tell ARRL and other organizations you join that you do not want your address made available outside the organization. When you receive mailings you don't want, contact the sender and say so. Most mailers don't want to send mail to people whom they KNOW are not interested. You can also register with a direct marketing group that coordinates mailing lists for the marketing industry and they can help keep your name off of lists they coordinate. Check with your post office, I don't have the info for DMA handy.

3491. Code Recognition Software/WEFAX software

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-02 16:32:28 UTC
From: csummers@bnr.ca
Message-ID: <3bni6s$amr@batph8.bnr.ca>
Source record: 255821

I am interested in obtaining code recognition software that will run on
a Macintosh computer. I have an LCIII, which has a 68030 with and A/D
built in. Surely someone would have written such code.
Also, is there code to recognize and decode WEFAX? I don't know if the 68030
would have the bandwidth for such code, if not, maybe someone has the code
using TI's TMS320C26 demo board.

For the same reason that Craig Shergold is still getting {post|business} cards
even though he has been cured, grown up and by this point probably graduated
from college.

To steal (and modify) an old proverb:

Well if it is an Emergency then they can respond. Even if they
were not HAMs the rules do not apply to a life threatening emergency.
But that really doesn't matter because if that is your only chance
then whether or not they respond is a null issue, it's only whether or
not they hear you. It's like firing three shots in the air, if it's
the only chance you do it and hope someone hears. It would be nice if
there was a reply but I'd accept someone just showing up, maybe even a
scanner enthusiast!

3498. Problem: Stations are changing

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-02 19:56:58 UTC
From: matthias@tc3.chemie.uni-bielefeld.de
Message-ID: <D078qy.MKz@hermes.hrz.uni-bielefeld.de>
Source record: 255750

Hi,
I bought a Philips AE 3205, 9 Band World receiver, 2 years ago.
Everytime when I turn the radio on it cannot hold the station.
It shows me in few minutes all of the stations which
I could get by turning the frequency tuning knob.
After a while, maybe 1/2 hour, it stops somewhere. So one day
the one station is at 92 MHz and the other day the station after
an 1/2 hour is at 102 MHz.
Maybe you can imagine how this drives me crazy...

What can I do (besides buying a new radio or smashing this
against the wall)? Is there screw I could turn?

Any help is welcome. Thank you in advance,

Matthias

You guys have all forgotten that the government is one big pocket.
It doesn't make any difference whether the FCC gets the fees or not.
If the FCC gets to keep the fees, their budget will just be reduced by an
equivalent amount. The FCC is going to get a budget to do its job. They'll
be funded either from fees or from congressional allocation--it's all
one big pocket.

>
>thanx in advance,
>chamber@netcom.com

Under the new definitions of business use of ham radio by the FCC, this
could probably be defended if no hams receive compensation.

However, this would not pass the NO BROADCAST rule. Broadcasting is defined
in 97.3(10) as transmissions intended for reception by the general public,
either direct or relayed.

In 97.113(5b) prohibited transmissions include broadcasting, one-way
communications, or activities related to program production or news gathering
for broadcast purposes. You are proposing to do all three of these.

I'd let the cable company provide the hardware and communications. That is
what they are in business for, after all.

While this may be acceptable in a settlement of differences between two private parties (though legal ethicists and other scholars are beginning to talk about how such settlements are not in the public interest), it is patently unacceptable for an organization like the ARRL which is accountable to its membership, to keep secret the results of such an agreement.

The ARRL is a 'democratic' organization; if some of the officers or staff have engaged in illegal activities, the membership needs to know, so that the offending individuals may be relieved of their duties.

If the settlement was a good one, we should know. If it was a bad one, we should know. Regardless, we should be given (freely) an opportunity to judge for ourselves.

Yes, secrecy is a common condition for out-of-court settlements. It is not a condition to which officers of an organization such as the ARRL have any business agreeing, as they have a larger obligation involving accountability to their constituents.

The IC281 (and the 430MHz version IC481) are both PLL modulated FM
transceivers. I wouldn't recommend them for 9600bd packet use.

There is a 8.5dB peak in the modulation characteristics at 41Hz. This
produces a very high bit-error rate.

And the tx<>rx turnaround times are more than 120 ms. Too much for 9600bd
use, IMHO..

Yes, if you're not thermal stressing the box. But most amateurs use it
sometimes to transmit 35 W rf power, thereby producing >50W heat. And I
wouldn't be so sure about the lifetime in this more realistic case..

Thermal stress (shrinking and expanding) of the output module is the most
often reason for breakdown of this costly module.

You might touch base with Hub W5UH who used to coordinate ARTS (Amat□{eur Radio Telegraph Society) which had the same sort of goals. He would be age 90 or so if he is still around, and might have a good mailing list to get things started. ARTS members used to check in on 7070 kHz as a calling frequency but haven't heard any activity in several years.□{

As a CW enthusiast, I like this idea. However, I don't like the 15 WPM minimum requirement: isn't it a little pointless and counterproductive? If I love CW, and can only send 13 WPM at the moment, why exclude me? Anyone who wants to be a member of such an orgazation certainly should not be discouraged. Wanting to join in the first places ought to be proof of a persons love of CW.

By the way, I'm thinking of others...I'm comfortable at 25 WPM

>
>Brian, KD6NRP

Hi Brian

Recently the FCC commercial exams have been updated, any reference book over a year old is out of date.

There are several commercial licenses now being issued by the FCC. They are the Marine Radio Operators Permit (MROP), the General Radio Telephone Operators License (GROL), The Global Maritime Distress and Safety Systems (GMDSS) Maintainers and Operators Licenses, the First Second and Third Class Radiotelegraphers Certificates and finally a Radar Endorsement.

The best study guide for the GROL and MROP is a text recently written by Gordon West and Fred Maia, it is available at most Radio Shacks.

The only current study guides I know of for the other licenses are the question pools.

These list all the possible questions and all the possible answers and the " distractors" (wrong ans). The correct answers are listed but no explanations are given. Question pools are available for each of the exams from National Radio Examiners 1 800 669 9594. Each costs about $8.

Exams for all these licenses have been privatetized (sp?)in a system similar to the ham volunteer examiner scheme. The FCC no longer gives exams.

There are several Commercial Operator License Exam Managers (COLEM) giving exams through out the US. The Gordon West book lists all the COLEMs.

We give the exams 8 times a year in the Boston area, under the supervision of the National Radio Examiners COLEM. For more information about our test sessions call Nick at 617 253 3776 (9-5).

Here's a way to find out: whenever I subscribe to something, or order
something over the phone, I use a different middle initial. So, for
example, if I join the ARRL as Jerry Q. Gardner, and then start getting
junk mail a few months later addressed to Jerry Q. Gardner, I know it
was the ARRL who sold my name to a mailing list.

: Problem I see with a fee each time you renew the vanity call is--what
: happens when some bureaucrat mistakenly lists _my_ call as a "vanity" call,
: and wants to charge me a fee for renewing my license? It takes _years_ to
: sort out that kind of problem!

This is what bothers me, too, for obvious reasons. It was my good luck to already be an extra during that brief period in the 70's when you could request a call of your choice at no charge. I wouldn't have changed if I still had my original call, but a few moves around the country had forced me to give it long before.

Gabrielle,

SHHHHHHHHHssssssssshhhhhhhhhhhhhh!!!!! Geeeeeeeeze Don't you know
that's Ham Radio's dirty little secret. Nobody wants to be thought of
as a newbie. That is why we even HAVE these goofy new calls. I call
'em Metric Calls. The 2 by 2's and 2 by 1's.

It began in the late seveenties when Extra's were permitted to get a 1
by 2 call... which until then, were restricted to hams that had been
licensed 25 years or more. I had 20 year old friends that got one by
two calls. It was pretty cool... but even then, some how, didn't seem
"right."

Then the FCC, who had been whining about how much time they spent
printing ham licences (my call took SIX MONTHS to process in 1975) got
the brillant idea to create "incentive" calls. Soon, they were flooded
with thousands of folks changing calls every couple months as they
moved/upgraded. It was completely insane...

Oh... well... nice to hear a "KA8" consider themselves an "old timer!"

73! and :-)

> BECOME ONE. Maybe they mellowed out finally.

Maybe they learned that there is NO law prohibiting the sale
of amateur radio equipment to anyone except as spelled out
in para 97.315(b)(4)&(5) of the FCC Rules.

It's too bad that not everyone is aware of this now. I believe
if transmitting equipment sales were prohibited to unlicensed
individuals the repercussions would be wild. For example:
those who are not licensed for the Amateur Extra class
sub-bands would not be able to purchase equipment capable
of operating there...and so on down the line for each other
amateur license class. Can you see what I'm saying.

Just like I've posted on FidoNet--we need to look at the
real picture and quit making our judgements based upon
emotion (not the case here) but I see so many people
blasting sales to unlicensed persons as if to protect
some sacred right to own amateur radio equipment. Their
reasoning has become clouded and their analogies don't
make sense. Case in point: Selling amateur radio equipment
to an unlicensed individual is the same as a grocer selling
tobacco and alcohol to a minor???????

Oh well, guess I'll go eat some prunes.....<hic>....an'
I ain't even 40 yet.

My schematic shows only two components across 13.6V line before encountering what appears to be a fusable series resistor. First, there's a Zener diode D1001 (PSKE18), and C1001 (470@16V). After the fusable resistor R1101, there are several decoupling and bypass capacitors, C1002, (.001), C1114, (100@16V), C1115, (470@16V) and C1116, (470@16V).

Any one of the capacitors, having gone to short circuit would be a good starting point. Needless to say, unless you have a current probe, finding a short such as this is tedious at least.

I suspect the fact that the "Negative" fuse blows, is not particularly relevent, if problem persists on main board after disassembly.

Good Luck,

Thom - N2cbv

JOE: You probably want a serious reply to your question, not just a lot of
FLABS (Folklore and B___ S___). But, it's the end of a long week and I've been

adjustingmy attitude with 12-year-old single malt Scotch, so here goes. Do not dump those two old classics. I was licensed in 1958 and will be 50 years old next week. I drive a 72 VW Beetle, write with a Parker 51 fountain pen given to me by my grandfather when I entered high school, and cut my grass with a push mower. Keep the old stuff. Clean it up. Get some tuner cleaner at RAdio Shack and blast all the variable capacitors and potentiometers'; that will clean out a lot of the problems. Replace the fileter capacitors. Make a list of the tube types and whenvever you encounter tubes for sale, buy some. Of course, you probably ought ot go ahead and buy yourself a recent model rice box from ICOM (I use the IC-129; the IC-735 is a classic), Kenwood, or Yaesu and get on the air. But, keep the old stuff. Make yur ice cream in a hand-cranked freezer. Drink our beer from the bottle. Be eccentric. You only live once and it's your life.

>I thought it was rated at 70 watts?

Nope, the Radio Shack 2 meter amplifier is rated at 30 watts output with
0.5 to 5 watts input. Current drain I suspect is near 5 amps so I doubt
the Radio Shack 12-volt regulated power supply can handle it. For home
use, the Astron RS-10 power supply is a good choice as a minimum.
However, I recommend getting the largest power supply you can afford up
front to avoid the need to buy another one for a nice mobile or base rig.

If the ARRL is a democratic organization then they never would have
caved in with regard to this issue; they would have kept fighting
the court decision out of respect for the majority of their members.

The only illegal activity being conducted is sodomy.

Greater than 2 MeV Electron Fluence for 02 DEC is: 1.4E+08
DRAO 10.7 cm Solar Radio Flux at 18Z, 20Z, 22Z: 77.9, 79.1, 79.5 sfu.

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7811 (S18W91) rolled
off the limb quietly. A new surge region is now coming on the
east limb and promises at least some activity. There were seven
uncorrelated B-class flares over the past 24 hours.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at quiet to minor storm
levels for the past 24 hours. Minor storming lasted for only a
short period at mid latitudes. Activity was probably due to a
favorably positioned coronal hole. Greater than 2 MeV energetic
electron flux ranged from moderate to high levels at
geosynchronous altitudes.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly unsettled for the next 24 hours then
quiet for the remainder of the forecast period. High latitude
stations may see periods of active levels over the next 24
hours, especially during local nighttime.

Event probabilities 03 dec-05 dec

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 03 dec-05 dec

A. Middle Latitudes
Active 20/20/10
Minor Storm 10/10/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 20/20/15
Minor Storm 10/10/05
Major-Severe Storm 01/01/01

HF propagation conditions were near-normal over all
regions, although high and polar latitudes continued to see
periods of minor signal degradation on night-sector circuits
(particularly transauroral paths). Conditions are expected to
remain near-normal through 05 December inclusive.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

DESCRIPTIVE CODES WHICH MAY APPEAR IN THE FOF2, M(3000), OR SID SECTIONS:

A = Blanketing Sporadic E
B = Complete Absorption
C = Equipment Problems
D = Frequency Higher than Equipment
E = Frequency Lower than Equipment
F = Spread Echoes
G = FOF2 is less than FOF1
I = Smoothed Value
R = Attenuation

Values in this experimental daily report have not been checked
for errors and may occasionally contain a few. Total electron
content values are given in units of 10^15 electrons per square meter.

3524. Bosnian(s) would like contacts into Bihac and other areas

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-03 05:11:35 UTC
From: lpingel@shore.net
Message-ID: <3boum7$kqe@shore.shore.net>
Source record: 255751

I've just received a request from a student who has family in Bihac.
Is there any relay net setup for Bosnia in general, Bihac in particular?
There are those here who would like to make contact with relatives.

I called ARRL and it appears there may not be a 3rd party agreement.
However, other countries might be able to communicate. As was pointed
out to me, Bihac may be too hot for messages to be passed on. Other
areas may be closer to a normal routine.

/\

ADMINISTRATIVE BULLETIN

SATELLITE ANOMALY AID NOW AVAILABLE

/\

AID FOR DETERMINING POTENTIAL SATELLITE ANOMALY RISK IS NOW AVAILABLE

A completely new graphical plot has been added to the Daily Summaries of Solar and Geophysical Activity which should be of interest to satellite operators and those with an interest in the environment in which geosynchronous satellites operate. The Daily Summaries of Solar and Geophysical Activity provided by the Solar Terrestrial Dispatch are now carrying daily plots of historic 60-day energetic electron fluence at greater than 2 MeV. These plots visually show recurrent tendencies in high-energy electrons which can produce influential electrical charging-related anomalies on satellites. They also permit a visual estimate of potential future increases or decreases in energetic electrons by displaying the recurrent tendencies of these charged particles. Institutions or organizations who are responsible for satellite health may want to use these new plots as tools toward anticipating and compensating for elevated charging levels in the near-Earth space environment.

In addition, the Daily Summaries of Solar and Geophysical Activity are now being supplemented with a complete set of 10.7 cm solar radio flux measurements from the Dominion Radio Astrophysical Observatory in Penticton, British Columbia (Canada). The daily summaries now state the measured solar radio flux at 2800 MHz as measured at 18:00 UTC, 20:00 UTC, and 22:00 UTC.

3526. QSL Manager for 9G5AA

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-03 06:18:21 UTC
From: ys@isr.harvard.edu
Message-ID: <3bp2jd$5oc@decaxp.harvard.edu>
Source record: 255753

I just have a quick comment about the QSL Manager of 9G5AA.
Apparently, "9G5AA" has been used by different operators in the
past, and the QSL Manager is different, depending on which
operation we are concerned with. For instance:

(1) QSL-Info Server on Internet says that PA2FAS is the QSL Manager
for 9G5AA. The last revised date is Jan. 30, 1993.

(2) "The DX Bulletin" edited by Chod Harris VP2ML says that
G3SXW is the QSL Manager for 9G5AA for 1994 CQ-WW CW Contest.
This is mentioned in issues 763 and 764.

I contacted the outgoing QSL Department of the ARRL, and was told
that G3SXW is probably the correct QSL Manager of 9G5AA as far as
1994 CQ-WW CW Contest is concerned. G3SXW is actually one of
the operators on this team according to the ARRL QSL Department
and also the DX Bulletin.

ARLP050 Propagation de KT7H

ZCZC AP64
QST de W1AW
Propagation Forecast Bulletin 50 ARLP050
From Tad Cook, KT7H
Seattle, WA December 2, 1994
To all radio amateurs

SB PROP ARL ARLP050
ARLP050 Propagation de KT7H

Solar flux was up only a tiny bit last week, averaging 80.2 versus
78.3 the week before. As forecast, the conditions over the weekend
were stormy, with the K index as high as six.

Solar activity should remain low, with solar flux declining to the
low to mid seventies, where it should remain until the middle of
this month. After that it should rise back to about eighty.
Geomagnetic conditions should remain somewhat unsettled.

Sunspot Numbers for November 24 through 30 were 12, 41, 42, 33, 32,
28 and 15, with a mean of 29. 10.7 cm flux was 78.6, 81.5, 83.2,
80.4, 79.7, 79.6 and 78.3, with a mean of 80.2.

The path projection for this week is from Seattle to Uruguay.

80 meters should be good from 0130 to 0830z, and 40 meters from 0000
to 0900. Check 30 meters from 2330 to 0130, but on a few occasions
it may be open another 8 hours. 20 meters should be open from 2130
to 0000, and 17 meters from 1630 to 2230. Check 15 meters from 1730
to 2200, with the best bet around 1930. On some days 12 meters may
be open from 1800 to 2030, and possibly as late as 2230. 10 meters
does not look reliable, but on some occasions it may open between
1800 and 2130.

On the issue of the cost of a Vanity Call Sign
1.) The beginning cost will DEFINITELY be $70.00 for a vanity call sign. That is the only recurring "regulatory" fee that Congress has authorized. i.e. $7.00 a year for a ten year term.
2.) The ARRL wants a one time processing fee of $150 - but this can not happen until Congress revisits the matter which will be some time from now!
3.) By theway, the Vanity Call Sign matter should be coming up for a final FCC Commissioner vote within 30 days.

Correct. 30 watts. Good advice. I purchased an RS-20 here recently and
I run the RS amp and HT with it quite successfully. Plenty of power for
that configuration with plenty of room to grow.

You might want to go even higher if you plan on running an HF rig some day.

> tobacco and alcohol to a minor???????

Yeah really. That just doesnt wash, Considering that only the latter is illegal. Its not illegal to own a HAM radio its just illegal to transmit without the appropriate license.

How about one of the palmtops? I have an HP100LX with 2MB built in.
It runs dos 5.0 and has a serial port... CGA compatible LCD display.

This config would allow you a very compact design.

I'll agree with all of that - I own a 470 also, and am mostly pleased with it.
Of course the VHF side suffers from some IM probs 'cuz Yaesu unfortunately
listened to hams who wanted their HT to be a cheap scanner, just like the
others. I use mine mostly on UHF and am very happy with it there.
If you shop around you can probably find one at a mail order shop that hasn't
finished closing the out yet, for around $300. I paid $329 for mine last June
at HRO. Check them and AES. Also Texas Towers usually has good Yaesu prices.

I don't know, but...
I've often thought that this would be a neat way to boost community interest in
Amateur Radio, if legal. (I'm not sure about it) Have the output of a local
ATV repeater monitored by the local cable company, and rebroadcast on a
pub-access channel.

It was always a repeater pair, hence the .34/.94 crystals. The
.94/.94 was for times the repeater was down or out of range.
That became rarer and rarer as repeater coverage and reliability
improved. Finally, a new national calling frequency was established,
146.52. You still often hear people simplex on repeater output
frequencies when they're in simplex range of each other and the
repeater is idle. That's both a holdover from the early days,
and a way to keep monitoring the repeater for those with real
radios rather than scanners.

: We are forming a new CW operators preservation society.

: The name of the organization will be C.O.P.S. (CW Operators Preservation
: Society)

This is very "defeatist-sounding" to me. I love CW and have for over
30 years. The mere mention of "Preservation" in the name of the group
is indicative that CW is going the way of the buggy whip (which it may
well be) .... however ..... if the intention is to get MORE ops
interested in actively using CW ... the word "preservation" is a
definite turn-off. Or is it the "operators" that are being preserved?

At any rate, I support anybody who wants to PROMOTE the usage of CW
but I just cringe when I see an attempt at a clever name and/or
acronymn that is self-defeating. Organizations do not flower and
prosper just because they have a nifty name ....but they could
lose potential interest from others by having misnamed themselves.

See ya on the lower 50KHz.

>for airtime!

Much though I believe that the ARS has an emergency communications
responsibility, I have to point out that Air Touch (nee Pactel) will
give you a handheld cellphone if you sign up for a year's contract,
and BellSouth only charges $49 for a cellphone if you sign up with them.
Cost of the equipment should not be a deterrent for anyone who wants
emergency cellphone communications capability. It's also a much more
practical alternative to ham autopatches on a day to day basis.

There can be times when you can't hit a cell, or the cellular system
is swamped, and an amateur radio can be useful, but if you are serious
about being able to do emergency comms, having a cellphone on your
belt is better than having a HT hanging there. Having *both* is
better still, and the way I do it. Best Buys has a neat padded holster
that's designed for a cellphone and a PDA. It'll hold a cellphone
and a HT just fine.

The ARS is mostly limited to health and welfare traffic in many emergencies, and quite frankly that's mainly a "feel good" thing rather than real emergency comms, though it can un-congest more important communications channels for more important traffic. There are times, however, when the ARS can step in to supplement the real emergency communications systems, or act as spotters for other services such as the Weather Bureau, or act as coordinators between real emergency response units with incompatable communications equipment, or just supply communications coordination for support groups of the real emergency services people. Those are all valuable contributions.

> I monitor 146.520 a lot, and it is the first memory in my radio
>and scanner.

Few amateurs do though, at least compared to those who monitor a repeater channel, and even those who do monitor provide sparse coverage compared to what is available via a repeater. I decided to run a little test. I got on 52 and called CQ for about 10 minutes, no response. I got on my repeater and simply spoke my callsign. I immediately got 4 people to respond, none of them within simplex range of my, fairly elaborate, home station. People listen where they operate, and most operations are via repeater. The repeater has the superior location and antenna to provide much better coverage than could ever be obtained by the sparse set of individual hams with their home, mobile, or handheld simplex stations. (Having an antenna 900 feet higher than the average home station gives the repeater an incredible edge.)

Many repeaters have been setup just for the purpose of being of service to the travelling amateur. Many repeaters have emergency power, most have someone listening almost every hour of the day, and the ARRL Repeater Directory should be part of every amateur's emergency kit. Rather than depending on the sparse coverage offered by 52 simplex, it would be better if amateurs acquainted themselves with the repeaters in the area they are going to be, and make use of them if they need assistance and the cellphone fails.

>those who are visting/passing through the area, as they probably aren't aware
>of the freq used.

The ARRL Repeater Directory is $6. Any repeater marked as having emergency
power is likely to be hosted by a group interested in public service comms.
That would be a good place to look for help first. The ARRL could even start
to mark repeaters designated as the primary emergency response machine in
an area. ARES should know, and they ought to be talking to those at
headquarters printing the books.

>I think the proposal of using 146.52 simplex, being monitored at various
>times (as stated in the listed article) is the best way to get almost
>nationwide coverage. Add it to your scanner.

Those of us who eschew scanners will be listening to one of the major
repeaters in the area, and it offers a lot better coverage than the
sparse set of amateurs scanning 52 from their HTs.

Agreed. Once anyone can buy a handheld device that's in sight of a comsat
at any time from any location (TRW and a Canadian company are working on
this right now), the simple miracle of communication is no longer compelling.
Operating skills, demonstrated willingness and competence to serve as a trained
corps of communicators, and continued experimentation and technical education
will then be our only Unique Selling Proposition (USP, as the marketing
folks call it). If you're not experimenting with advanced modes, or providing
services to public service or other activities, or educating young people
in the process of choosing a career, you're just coming along for what could
easily become a downhill ride.

RBellville (rbellville@aol.com) wrote:

: My vote is to never use 146.52 for an emergency but use a cellphone
: or professional communications network only for such a situation.

The other night a fellow and his dog got lost in the rugged hills of a local park. He used his cello-phone to call his wife and 911 to tell them not to worry or look for him. He was going to wait it out till morning, so he could see his way. Then his battery died. The Sheriffs Search and Rescue went out and found him six hours later, huddled in 30 degree weather. Next time he goes out hiking at night he says he will take a spare battery and a flashlight.

You can buy a cheap cello-phone and allways be able to dial 911 even if you never sign up for service. A good back up for amateur radio.

146.52 and 446.000 are the most heavily monitored nation-wide simplex fm frequencies and should always be tried if you have a personal emergency. They can reccomend a local repeater for further communications.

: The only time amateur radio ought to be used for an *emergency* is
: when the FCC *declares* one.

The Fcc hasn't declared an emergency since ww2. Now days the state office of emergency services OES declares the emergency.

: Amateur radio ought to be used for morale purposes only and
: true emergency communications should be performed by
: trained, responsible professionals using their own frequencies.

Durring our last major earth quake the normal public safety state and local repeaters were either overloaded or knocked off the air. Amateur radio was pressed into service providing additional communications for these agencies. Under amateur control state and local agencies were able to use our frequencies for their operations.

: After all, would you really want a "hamamedic" to arrive at
: *your* heart attack?

You bet! many of our paramedics are amateur radio operators.

Remember we are providing the communications for these trained professionals not doing their jobs...

Gee, Jeff, no Morse stations among your examples.

Sorry, couldn't resist. :-)

You're right about amateurs, and amateur systems, being useful in emergencies though. For the most part, amateurs are the only ones who can rig a temporary antenna, wire up emergency power, set up portable data terminals, do network crosslinks, etc when the fecal matter hits the air propulsor. Most of the emergency pros depend on contracts with two way pros to keep their gear going. They don't know how to change a fuse themselves. During a disaster, surprise, those pro two way folks are overwhelmed.

Also, during big emergencies, pro emergency comm systems, sized for the normal day to day needs of the department, are simply overwhelmed by the volume of essential traffic that needs to be handled. Amateurs can offload a good deal of the less than "911" traffic to their systems and free the real emergency comm systems for the most vital safety critical traffic.

In many cases, however, if the cellular systems have survived, they are a better alternative for point to point communications. Case in point, a major ice storm knocked out power to a major hospital. They've got emergency backup power for the operating rooms and critical care unit, but somebody forgot the radios and the phone PBX. They put out a request for communications support. A ham rushes over sleepily at 2 am, hands them his cellphone, checks into the ARES net to say all is well, and racks out on a couch in the waiting room. Communications emergency solved.

There are times, though, when point to multi-point transmissions are more efficient, and amateurs are ideally suited to provide that style of communications. Coordinating a SAR effort would be an example where info may need to be distributed to an entire group at once. Cellphones aren't best for that.

None that I know of, and certainly none that I would trust. It's quite likely, for example, that copper mesh goggles would only serve to *concentrate* the field in the vicinity of your eyes. The back of your head isn't a very good shield you know.

I suppose a full mesh suit, as used by linemen working on hot ultra high voltage lines, would offer protection. It would be a full Faraday cage for your body.

>Final questions to people opposing the code - what can you offer to
>replace it?

Vassili, most of us do not oppose the *Code*, we oppose the code *speed test* element as a separate pass/fail part of amateur exams. At least some of us see that as redundant unless there's some overwhelming risk that someone might send *bad code* on the air without it, and that could somehow grossly damage amateur radio. I think that risk is rather moot.

For on the air operations, there are a multitude of other operating modes as alternatives to manual Morse Code. In the digital realm, there are the various 'TORs, packet, RTTY, etc. In the analog realm, there's SSB, AM, NBFM, SSTV, FAX, etc. For those who care to try it, there's even manual Morse Code. Lots of different modes, none of which deserves a special status in amateur *exams*.

Or how about a "hammedical doctor"? There are a few of us around, too!
The point is you never know who might be listening or who might be
available to help. In my area, there are at least half a dozen ham "first
responders" as well as 3 or 4 ham EMT's and at least 2 ham doctors who
regularly monitor the local repeater and/or 146.52. Also several police,
highway patrol and sheriff's department officers who are hams have gotten
permission to keep ham gear in their vehicles. And I live in a relatively
small town of 35,000 - I'm sure the audience of people who are
appropriately trained to respond to emergencies (and who are hams
monitoring the VHF/UHF frequencies) is much higher in larger cities. And
that's not to mention the scanner types who listen but don't talk, and who
could pick up the phone to call 911 if they hear someone needing help.
No, I don't think we should keep emergency traffic off our bands! It's
one of the few things most hams can still do to justify their license and
precious spectrum space to the powers that be. 73 - Alan Braun MD, NS0B

In response to those who whould choose .52S or 34/94 as a "national alerting frequency", these particular channels are already heavily used nationwide. An alerting frequency ought to be a fairly quiet channel - who wants to have the babble of various mobiles going at 3am or worse? (if it turns you on to have *noisey* babble going for 24 hours a day - have fun! I, and most people I have discussed this with (I was Section Manager here for over 4 years), don't want the babble)

Tone alerts are a good idea - perhaps a special PL tone and PL-decode radios are a good answer. Outboard tone decoders take space and cost money. There were tried in my area and failed for lack of support.

IMHO, the best options (in decending order) are:

1. A dedicated regional or local ARES/RACES repeater that is monitored most of the time. (at least the signal is full quieting and the babble is from people you know rather than itinerants)

2. A dedicated QUIET simplex channel. (this keeps the babble to a minimum but has the disadvantage that an alert posted by a weak station might not be heard.)

3. A locally/regionally adopted PL tone for alerts and a designated channel (repeater or simplex). (this can work but may require that many folks go out and buy either a PL decoder for their radio or a whole new radio that includes PL decode)

4. Anything else.

Note that in my area (Silicon Valley) the disasters we have actually had in the last 25 years or more have either been fires/floods/plane crashes where the telephone service is unaffected (we have LOTS of phone trees set up for alerts) or "self-announcing" disasters (Richter 7 earthquakes or major storms), so a radio based alerting system would see very little use in any case. YMMV. Pick the scheme that is least affected by the kinds of disasters YOUR area has had - you'll probably see them again.

Geeeessshh, if you'all would remember, there was "class" licensing
before it was "opened" to one class.

With a general class license, I could use only 10m phone. Needed the
high class license to get on 75m.

So you "lost" what was only given for a short time. The expetiment
must not have gone well. They sure didn't let it go for long.

Of course there are fewer extra class licenses. Not many reasons for
getting it. You either want the bottom little bit of room, (for dxing?),
or you like setting goals and working toward them.

In our new, modern, pc correct erea, most people want things without
having to work for them.
All one has to do is look at our school systems.

Oh well, not wanting to argue, just reminding you about how things
used to be.

Now I will crawl back to my key and have some real fun. CW, QRP,
married 36 years (to the same lady and still in love with her!).

No wonder I don't fully agree with most people!

73's, Ron

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 03/2330Z DECEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 03 DECEMBER AND FORECAST FOR 04 DECEMBER - 06 DECEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 82/23

GOES satellite data for 02 Dec
Daily Proton Fluence >1 MeV: no data
Daily Proton Fluence >10 MeV: 1.4E+04
Daily Electron Fluence >2 MeV: 1.4E+08 (moderate)
X-ray background: A3.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
04 Dec 05 Dec 06 Dec
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 04 Dec: 85/27

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet, with an active period 12-15UT.

Estimated Indices : A K Observed A Index 02 Dec
Learmonth 9 2222 4122
Fredericksburg 13 20
Planetary 12 18

Observed Kp for 02 Dec: 3344 5333
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
04 Dec 10 Quiet to unsettled
05 Dec 10 Quiet to unsettled
06 Dec 12 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

03 Dec normal normal-fair fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
04 Dec normal normal-fair fair
05 Dec normal normal normal
06 Dec normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
03 Dec 4 near predicted to slightly depressed

Predicted Monthly T-index for December: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
04 Dec 5 Near predicted to slightly depressed.
05 Dec 15 Near predicted monthly values
06 Dec 15 Near predicted monthly values
COMMENT: Blanketing sporadic E was observed at 1,5,7 12 and 20UT.

If you really want to perform serious surgery on the radio, it is probably possible. However, those sub-mini radios are all surface mounted components and it would be a nightmare to work on, not to mention voiding the warranty. Interference shouldn't be a problem, but the i.f. bandwidth may be a bit narrow and the PLL bandwidth might track out the modulation. Look for a surplus Mitrek or similar.

What's commercial about it? They have a total monopoly on a resource
and exclude all competition. The price is whatever they set and not
controlled by the free market because they don't actually need to
maximize profit.

Seems like we should be cheering

Well, I can certainly tell you the difference between a typical Radio Shack scanner and my Icom R-7000 communications receiver that both cover basically the same bands.

The scanner usually is not continuous tuning, the R-7000 tunes continuously from
25 Mhz to 2 Ghz.

The scanner usually only receives AM, FM narrow, and FM wideband, the R-7000 includes AM, FM wide and narrow, and upper and lower SSB.

My R-7000 has a noise blanker and an attenuator for strong signals, the scanner has
neither.

Usually a scanner has anywhere from 10 to 400 memory channels and scans rapidly
between them at a rate of around 20 channels per second, even though the R-7000 has 100 memory channels, it scans very slowly between them. I can however do various types of scanning. I can scan from lower to upper limits, I

can scan for busy channels and have them put into 10 memory locations, I can scan only marked memory channels, and I can scan only channels with a certain mode, I.E. SSB only channels.

A scanner does not have a signal strength meter, the R-7000 has a calibrated S-meter that can be used to determine signal strength or for center tuning for FM narrow band.

A scanner usually tunes in 5, 12.5 or 25 Khz steps, the R-7000 tunes in .1, 1, 5, 10, 12.5
or 25 Khz steps and has a normal VFO for tuning plus pushbuttons for direct frequency entry.

A scanner usually has a very broad untuned front end, and is subject to intermod and
overload from nearby R.F. stations, the R-7000 has band pass filters for each band it is receiving, and has a very tight front end. It is one of the best receivers I have seen for intermod rejection.

The R-7000 has a triple conversion receiver, I'm not sure about the scanner, it may be single conversion.

I'm sure that there are many other differences, but I can't think of them right now.

I hope this helps answer your question.

Usually the callsign databases are updated quarterly I believe. Give it some time. There is no way for the database to know your call before you do.

In a life-threatening emergency, FCC rules can be disregarded completely.
In which case it would NOT be illegal for police or 911 operators to
respond back to a distress call over a ham frequency.

Since the current QST has a prominent ad by the LARC, presumably the
ARRL has bent over backwards to accomodate them.

I've got a portable packet station (ICW2Am, Paccom Handipacket,
Mac PowerBook 145b) that fits nicely inside a Pelican
Products (Torrance, CA) nylon resin case. Waterproof to
30 ft, lifetime guarantee.

>our nation *depends* upon amateurs for anything other than
>the "home guard": those old codgers in WWII who donned army gear to search
>the skies for invaders. It keeps them busy and feeling useful.

First, I would like to point out that the use of amateur freqs for calling in an emergency of sorts isn't always going to be someone on a HT, on 2m (or UHF for that matter).

Amateurs aren't _ALWAYS_ needed to _RESPOND_ to a emergency call - but to relay the call, and reliable information on the actual emergency/location/etc.

There was a case I once read up, where this amateur in the middle of somewhere (US, I'm not sure which state, but simply put, he doesn't have a beach anywhere near him) who faintly heard a SOS (morse) on HF. He responded, and found it was a boat (ship?) that was sinking in the middle of some ocean (or some other great water body).

OF COURSE this amaeur won't be able to RESPOND or do _ANYHTING_ to help the poor fool right? So, just ignore him and hope someone closer responds...

WRONG! He tried his best to get as much info from the Radio Operator (location, etc (I presume long/lat)) and called up the Coast Guard and relayed this information across. He maintained radio contact with the boat and kept the Coast Guard up to date to the situation.

Moral of this incident? Staying fit isn't everything. Bumbling old fools isn't all the time a problem. Emergencies aren't something that happens everyday, nor are they easy situations to handle. They can happen in many ways, and usually, in the worst possible you can think of. It's not necessrially (sp) something you, as an amateur, can go there personally to help, but sometimes, relaying the information to someone who can, is what 'emergency communications' all about.

Would you know what to do if you heard over the air a plane crashed, and is calling a distress signal, or you hear a SOS from a boat a few hundred (thousands) from your location. Will you ignore it hoping that

'someone closer to them will hear them'

What will you do (just for the sake of arguement), if you heard a space satellite (carring amateur equiptment?) raise a mayday, saying something like they've lost all oxygen, and will be out of air in 15 minutes? (I haven't a clue on this one...)

Penny for your thoughts...

3576. 7.039 " F " beacon? Help

Seems to me that the last time the fine folks at Buffalo (Devon et al) got
a new CD donated was in the spring. callsign.cs.buffalo.edu 2000 is *not*
online with the FCC ... It *is* the best of the callsign servers on the
'net, tho'.

As an aside, I did find an error in the database: look up the call AB5BB
- the info is wrong ...

Luecke (luecke@aol.com) wrote:
: The new rules and regulations that are being put into place in our
^^^^^
: community will successfully
: FULLY shut down N3TCE in both voice and packet transmissions. The new rule
: will state as ^^^^^
: follows:"No outside or attic mounted television aerial or radio antennas
: or other aerial or antenna
: for either reception or transmission, including, but not limited to,
: satellite disk antennae, shall be
: permitted upon the property or the exterior of the home." No antenna
: restrictions were disclosed
: in the covenants at the time of the purchase of the home. By not allowing
: even an antenna in my
: attic will keep transmissions from connecting with even the closest
: repeater.

Do consult an attorney familiar with covenants, CC&Rs, etc. But I'll
offer the following from my non-lawyer perspective.

The "comittee" or association is implimenting a NEW rule and they
probably can't enforce it against Pre-existing conditions.

The ban against any antennas (even indoors in attics) is totally
unenforceable. How would they know? They couldn't get in to
your attic to check for antenna(s) in any manner. No judge
would grant them a search warrant to enforce committee regulations
of such draconian (and stupid) aspects.

The committee can (IMHO) adopt the rule and enforce it against any
future external antennas (at least those that are visible) but
I doubt they could do anything about antennas already there and/or
antennas they can't see.

Keep us posted in this (or in the .policy) newsgroup.

: I will be forever in your debt should you decide to assist me in this
: fight. It is not an impossible
: dream and through your support I can receive a waiver that will benefit
: the community, the
: amateur radio community and possibly someday even your area should a
: disaster occur.

I think you have the stronger position. Again, talk to an attorney,
but remember that the antenna you have can't be removed by anyone
just because they want it removed. The "committee" would first have

to file a lawsuit against you in an attempt to enforce their new antenna ban. That costs money and takes time. I think they are probably trying to play a poker game with you (and any other home owners with existing antennas) in an attempt to have you voluntarily remove the antenna. And, as I said above, they hhaven't a prayer enforceing a ban on what you may have in your attic.

DAILY SUMMARY OF SOLAR GEOPHYSICAL ACTIVITY

03 DECEMBER, 1994

/\

(Based In-Part On SESC Observational Data)

SOLAR AND GEOPHYSICAL ACTIVITY INDICES FOR 03 DECEMBER, 1994

NOTE: The energetic electron flux at greater than 2 MeV continued at moderate
levels over the last 24 hours.

NOTE: The Effective Sunspot Number for 02 DEC 94 was 28.0.
The Full Kp Indices for 02 DEC 94 are: 3- 3+ 4- 4- 5- 3- 3- 3-
The 3-Hr Ap Indices for 02 DEC 94 are: 11 20 25 25 37 12 13 13
Greater than 2 MeV Electron Fluence for 03 DEC is: 2.4E+08
DRAO 10.7 cm Solar Radio Flux at 18Z, 20Z, 22Z: 80.4, 81.8, 81.7 sfu.

SYNOPSIS OF ACTIVITY

Solar activity was very low. Newly assigned Region 7813
(S08E78) made a quiet debut onto the visible disk and is the
sole spotted region. A spotless plage located nearby at N08E70
spawned a B7/0F flare with Type II sweep at 1246Z, the
highlight of an uneventful day.

Solar activity forecast: solar activity is expected to
persist at very low levels.

The geomagnetic field was primarily quiet to unsettled. An
episode of active conditions occurred early in the period. The
greater than 2 MeV electron flux was at high levels.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled the next three days.

Event probabilities 04 dec-06 dec

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

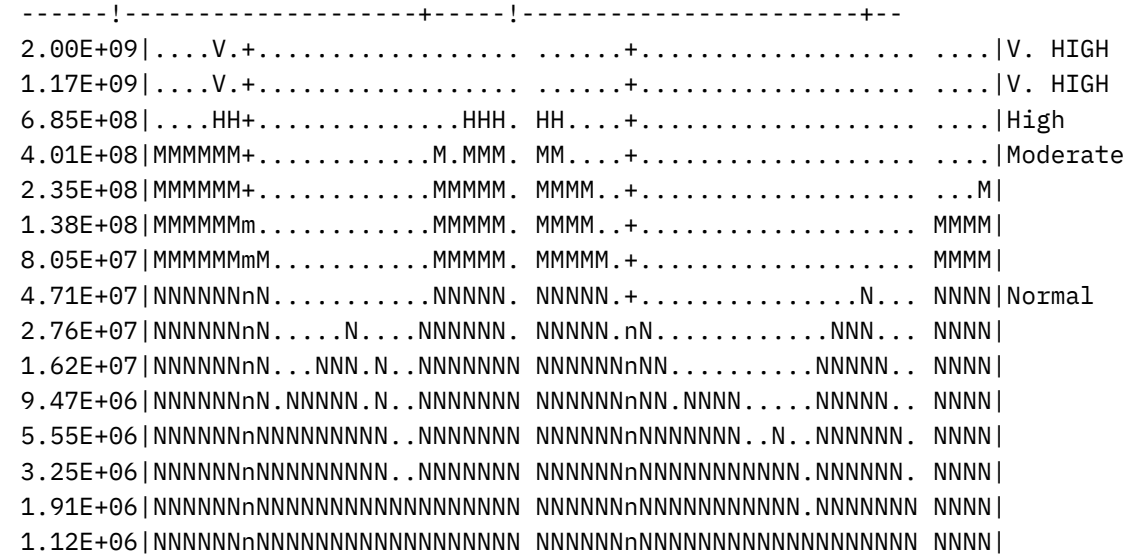
Geomagnetic activity probabilities 04 dec-06 dec

A. Middle Latitudes
Active 20/10/20
Minor Storm 10/05/10
Major-Severe Storm 01/01/01

B. High Latitudes
Active 25/25/25
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

HF propagation conditions were slightly below-normal over
the high and polar latitude regions during the early part of
the UTC day, but returned to near-normal by the mid to late
part of the day. All other regions were near-normal.
Near-normal propagation is expected to continue through at
least 06 December inclusive.

ENERGETIC ELECTRON FLUENCE 60-DAY HISTORY AT GREATER THAN 2 MEV



6.60E+05|NNNNNNnNNNNNNNNNNNNNNNNN NNNNNNnNNNNNNNNNNNNNNNNN NNNN|
------!-------------------+-----!----------------------+--
Nov Dec
NOTES: "V" = Very High Fluence, "H" = High Fluence, etc, " " = No Data,
"!" = Solar rotational boundary periods from current date. Electron
fluence is flux integrated over time in units of cm^-2 day^-1 sr^-1 as
measured by GOES-7. Fluence values that are moderate or higher have
been correlated with satellite anomalies. Sustained high to very high
fluence has been correlated with serious malfunctions.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ --------------------------
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

ARG = Argentia Canada (N48W053)
BER = Bermuda Bermuda (N32W064)
DYS = Dyess AFB TX USA (N32W099)
ANC = Anchorage AK USA (N61W150)
PAL = Palehua HI USA (N21W158)
BOU = Boulder CO USA (N40W105)
CNV = Cape Canaveral FL USA (N28W080)

DESCRIPTIVE CODES WHICH MAY APPEAR IN THE FOF2, M(3000), OR SID SECTIONS:

A = Blanketing Sporadic E
B = Complete Absorption
C = Equipment Problems
D = Frequency Higher than Equipment
E = Frequency Lower than Equipment
F = Spread Echoes
G = FOF2 is less than FOF1
I = Smoothed Value
R = Attenuation

Values in this experimental daily report have not been checked
for errors and may occasionally contain a few. Total electron
content values are given in units of 10^15 electrons per square meter.

I don't own a Yaesu FT 5200, or have a schematic for one, but it sounds like
the problem you have might be a shorted protection diode.

Most radios have a diode that is connected across the DC input from plus to
negative. The purpose of it is in case you connect the radio to the DC supply
backwards, in theory, you would blow the fuse, and not damage the radio.
Usually these diodes are located where the DC enters the radio or very close
by. I don't know where it is located on your Yaesu radio, but you might look
around the area where the DC enters that board.

Hope this helps you get it running.

One other problem that I have noticed is that some manufacturers use diodes
that have a smaller amperage rating than the fuse. Usually what happens is
that you either end up blowing up the diode, or at minimum shorting it out,
and then constantly blow fuses till you replace it.

73, Rick, WB7UGZ Winton, Ca.

You might consider leaving the KAM at home and getting something
that runs on batteries instead.

I have taken my HT, palmtop and KPC-3 (with 9V battery inside) on
trips. It works out very well and it all runs on battery power.

Re: the CMOS Super Keyer II

: But Dana, don't you have to enter a lot of the commands using
: awkard code sequences to change just about anything other than the
: speed? It sounded like it would be cuumbersome to operate in a
: contest. Tell me more!

Nahhhhhhhhhh..... it's a piece of cake. There are several
commands available .... but it's no big deal. I mean, okay you
enter M to toggle the monitor on and off; enter S to set the CW
speed (or use the knob) and/or to query the keyer on what the
current speed setting is. Some commands you might use infrequently -
but heck, there just aren't that many.... it's easier than trying
to memorize the major Q-signals.

Also, if I recall the original article in (the November 1990? issue of)
QST ... the source code was available if you wanted to try and program
the micro-processor yourself .... but what the heck .... it's still
cheap!

Cheers
Sandy

As for us losing frequency allocations, I believe there was a law recently passed that prevents the FCC from just taking bands. They have to reciprocate the loss with band-space somewhere else.

3590. WA4FJF wants old TRANSISTOR AM RADIOS

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-04 13:50:51 UTC
From: adrandy@aol.com
Message-ID: <3bshfr$16e@newsbf02.news.aol.com>
Source record: 255714

I'm still looking for old 50s and early 60s transistor radios. These are the small kind made of plastic (sometimes with metal trim) and were usually made in the US or Japan. Let me know what you have by emailing me information...the name and model number (if you know it), whether or not it works (hopefully but not required) and has the box (not necessary but adds to the value). If the radio is in poor physical shape, the value is much less from a collecting standpoint. I'll pay $10 to $40 for most radios, but a few radios may merit anywhere from $60-200 (Sony TR-55 and TR-63, Regency TR-1, Toshiba 5TR-193, for examples).

Keep me posted with asking price if possible; thanks again; and 73 de WA4FJF.

Randy
email: adrandy@aol.com

P.S. I'm also looking for 50s/60s radios marketed to children. They typically had only 2 transistors and worked marginally if at all. Plastic cases. They were sometimes marketed as "Boy's Radios" or "toy" radios, etc. Please email with what you've got.

I have TS820S for sale MC60 Desk Mike included, no box or manuals asking $650.00 OBO call (901) 837-3518 for details or post back thru this system.

Thanks David

3594. Cage Dipoles

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-04 15:43:21 UTC
From: david.siglin@ccibbs.com
Message-ID: <9412041501371625 3@ccibbs.com>
Source record: 255724

I have several sets of both 10" and 12" rings for use with cage (fat) dipoles. Using 6 or 8 wires in an 80 meter design one is able to construct an antenna with about 600KHZ of bandwidth from the center freq. If you are interested in this type of antenna leave me a note here or call me at (901) 837-3518 or (901) 837-0020 BTW and 80 meter version of this antenna requires 8-10 rings, also the 80 meter version will work on 10 meters!

Thanks Dave KC4LTC/NNN0BCK(Mars)

: : *your* heart attack?

: Would you rather not have *anyone* show up at your heart attack?

I would rather have a trained emergency technician or emergency room physician be present. If they are not likely to be available, then instead of wasting time with amateur radio, we ought to be raising money to *make* a trained person available for at least some threshold, say 99.9% of the time.

For the remaining .1% I'd like to rely upon someone with proper Red Cross first aid/cpr training. A amateur license is not a qualification.

: the local professional services are overwhelmed and rely heavily
: upon volunteers. A good many federal/state/county/city services

Of course hams should offer their (limited) services, like any other
good citizen. But it is *very* poor public policy to *rely* upon
them as we might rely upon a sworn, paid emergency worker.

I check into the local nets and would offer my equipment in case of
emergency need. I also keep high-quality emergency equipment on
hand so that I can give much of it to neighbors who are not so
well prepared. But I would not *count* on my help...

: Here is a specific example: In October 1992 the island of Kauai
: (Kauai County) took a direct hit from a catagory 5 hurricane.
: 50% of the island was distroyed. For several days the only
: communications between Kauai County and the rest of the state
: were provided by amateurs. All logistics and medical comms were

Sounds like the local officials did not thoroughly vet their equipment
and emergency plans. It's not as if Hawaii and Florida never have
hurricanes.

: handled by hams; a ham station was set up in the governor's office
: (of course, amateur equipment is perminently installed in all
: county and state emergency operating centers; the governor on Oahu
: wanted a direct `hot line' with the mayor of Kauai - that hot line was
: 2M). Hams were placed in fire stations and in police cars since

Sounds like the local officials want to go "on the cheap" and do not
want to pay for a reliable emergency communications systems on their
own dime. In this day of satellites and cell phone their is little
excuse for such makeshift arrangements.

: Let's hear from those in the mid-West who work jointly with the
: National Weather Service as tornado spotters.

If amateurs sold their equipment and helped buy a couple more
doppler radar installations, I'm sure many *more* lives and property
would be saved.

: One wonders why you're so sour about hams being volunteer communi-
: cators. Hopefully the prunes will help (no more than 6 now).

Amateur radio is for fun, and rarely a specialized public service.
I don't need to pretend that strapping on a HT is better than paying
my 911 utility fees.

: why your such a grouch. I expected a birthdate of 1925.

Dog years. And I don't understand why amateurs are defensive about
their limited role in public service. I don't feel less a ham because
I use radio for fellowship rather than an accessory for my WWI
Kaiser helmet.

Hello. I was spinning the dial on 17 m. where I really have not explored much, and I heard a number of phone contacts going on below 18.068 where the amateur band begins (according to ARRL Handbook). How is it that amateur call stations are in that portion - are these extended freqs. due to MARS or some other voluntary amateur operation? BTW, one of the stations was Canadian, and the others were American.
Just curious. Certainly was not going to give them a call and ask since it seemed from my guides to be a no-transmit area.

Thanks
Brien

Amateur Radio Club, I passed the exam for the no-code Technician license
on November 19th. I'd like to get on the air by Christmas,
FCC and mail permitting! The December issue of QST mentions new FCC
rules to go into effect on December 20th, 1994, where one can begin
"operation as soon as the new license data appears in the amateur service
^^^^^^^^^^^^^^^^
license data base, rather than, (as now) when the license document has been
^^^^^^^^^^^^^^^^^^
delivered. ... details ... will be announced... (P. 87)

Does anyone have more information on this?

Thanks.
Don Erickson (callsign TBD)

I believe if you follow the argument, ham radio in the UHF/VHF bands will evenutally die becuase you will have the situation of alot of rich and influential people who don't know anything about ham radio or even radio communications in general saying "Well, I want my car phone and those are the only 'uncluttered' frequencies that are left." It will be a sad thing but, I can see it happening unless Hams can make themselves more public in their usefulness and the FCC clamping down COMPLETELY on the people who make Ham look bad because they are not playing by the rules.

I have found a guy that is building a 10 minute voice IDer. This thing works great on HF. I have been looking for something like this for a long time.

1) Digital Voice Recorder ID's
2) Direct Audio input to Rig
3) You record up to a 10 second announcement
4) You adjust it for every 10 minutes.

This guy's name is Phil Chambley and he lives in Rome Ga.
His address is;

K4DPK
Phil Chambley
28 East Camilia Rd. NE
Rome, Ga. 30161

(706) 232-4618 or (706) 235-4275

I think he is getting about 90 bucks for these things. I love mine and I suggest you jump on it.

SB DX @ ALLBBS $OPDX.185
Ohio/Penn DX Bulletin No. 185

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 185
BID: $OPDX.185
December 5, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, KC1QF, W4/YV5DTA, WA4WTG, K8PXG, K8YSE, WD8NSD, DL7VEE & DXNL, DL7VTM, G3NYY and JH2PDS/1 for the following DX information.

3V, TUNISIA. Reports from Japan state that Karl, DK2WV, would be visiting 3V-land in this month. It also mentioned that he is not sure if he will be able to operate on the air, but he hopes to be active. Karl has operated before from 3V in the summer of 1993 as 3V8W.
Meanwhile, 3V8BB continues to be active. Activity was reported on/or around 7005 kHz between 2300 and 0230z, 14022 kHz at 1530z working Europe and 21290 kHz between 1400 and 1500z.

9G, GHANA. The DX News Letter reports that PA3ERA and PA3FUE plan to operate from Dormaa Hospital as 9G1AA between January 17 and 31, 1995. Meanwhile, 9G5SX has been heard on 1829 kHz between 0030 and 0200z. 9G1MR was heard over the weekend on 21261 kHz at 1715z.

A6, U.A.E. Don, WB2DND, reports that A61AH, A61AI and A61AN are three new licensed operators from A6-land. Nasr Fekri, A61AN, has been heard this weekend on 14262 kHz around 1415z. QSL to P.O. Box 53656 Dubai, UAE. So far there have not been any reports on A61AI as of yet. Al Mur Al Mohiri, A61AH, has been heard around 3792 kHz at 0020z. QSL to P.O. Box 4800, Dubai. Don, WB2DND, has also reported that he has copies of the A61AH and A61AN licenses and will forward them to the DXCC desk for their files.

C6, BAHAMAS. Just a reminder that Walt/G3NYY, Tim/G4VXE, Dave/WG3I and Meg/N2NQI will be active from New Providence Island, Bahamas from December 10-18th. Operation will be mainly CW, but some SSB may be available occasionally. Callsigns will be C6A/homecall. QSL via their home call (CBA or via bureau). They hope to be active on all bands, 160-10 meters, including the WARC bands. Look for them on 160 and 80 during or around their sunrise, Bahamas time.

CHANGE OF PLANS. It was reported last week, Tom, DL7UTM, was going to be active from the Maldive Islands during the holidays. This has changed. Tom has pushed back his 8Q7XO operation until possibly March/April of 1995.

FK, NEW CALEDONIA. A Ja group will be on the air from December 14-19th. Look for JM1WBB, JN1BSH, JO1SIT, JP1IHT and 7K1WLE signing FK/callsign (they are trying to receive FK calls) on all bands. QSL via 7K1WLE, Hisato Kobayashi, 2-7-19 Mejirodai Hachioji-city Tokyo, Japan.

FR, REUNION. FR5DX was heard over the weekend working 40 meters SSB. Check between 7050 and 7055 kHz listening 7170-7180 khz at 0300z. FR5DD was heard on 14026 kHz around 1330z.

FR/G, GLORIOSO ISLANDS. You still may have few days left to work Jacques, FR5ZU/G before he departs on December 8th (Unless he has left already. Last report was on December 2nd). Meanwhile, Henri, FR5ZQ, is now signing FR5ZQ/G and is expected to be there through the end of the year. He has being heard on 21260 kHz (list operation) around 1630z. QSL via CBA.

PIRATE REPORTED. James, 9V1YC, in Singapore reports that a station operating as 9V/SV2BBJ, giving his name as Nick, and stating to QSL to his home call, is an unlicensed and an unauthorised operator.

SY, MOUNT ATHOS. Peter, KC1QF, states he plans to be in Mt. Athos next summer. He plans to operate on HF bands along with RTTY/Packet. He will be going to Greece this Christmas to arrange things.

T31, CENTRAL KIRIBATI. It was reported that Norbert, DF6FK, would be active as T31BB, from December 14-21th.

T32, EASTERN KIRIBATI. Several JA operators will be heading up a big operation from here between December 27th and January 2, 1995. Look for T32J (JR5JAQ), T32A (JA5EXW), T32Q (JR4QZH), T32X (JA4GXS) and T32O (YL JF4LNO) to be active on 160-6 meters, CW/SSB/RTTY and possibly on the satellites. QSL via homecall.

U.S. POSTAGE INCREASE. OPDX received several messages from individuls to remind the readers that postage in the United States will increase from 29 cents to 32 cents in January 1995. So please, when QSLing, include the proper postage.

KEEP THOSE BALLOTS COMING! Ballots for the Fourth Annual OPDX/NODXA DX Survey can be found in OPDX.184. Ballots can be sent to the following packet and online addresses listed below.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to:

DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

I had a Bandmaster Senior Model TBS-50C given to me.
It was put out by Harvey-Wells Electronics, INC.
It is in excellant condition and friend that gave
it to me said he bought it and never used it.

It looks like it came out in 1949 according to
the manual.

Anyone know anything about this radio and what is
its value on the market.

Seve

Ahhh yes, I had a KE6--- ask me the other day where I got a WB7 call. He did not realize there was anything except KC, KD, and KE6 calls.

This is all making me feel sort of old, just like when I was in the Air Force and at around 18 years, I started realizing that the new troops coming into my shop were born the same year that I first enlisted. Heck, I was only 36 yrs old at the time.

Asterisk indicates predicted value. No predicted values have changed
relative to the set of T-indices contained in last month's Summary.
For information concerning ASAPS for an IBM PC (or compatible) contact IPS.

The IPS Monthly T-index is derived from the observed monthly median values
of foF2 for each hour at up to 40 ionospheric stations worldwide.
These records become available from IPS stations in Australia very soon after
each month, but the majority are received up to one year later.
This means that the exact observed value of the monthly T-index is not
available until some months later.

The predicted smoothed monthly T-indices are computed by using a statistical
analysis of the observed monthly T-indices for all solar cycles since 1938.
The IPS T-indices may not be updated each month but only when sufficient new
data becomes available.
==========
2. FLARES AND SHORT-WAVE FADEOUTS

All M flares with an energy greater than or equal to M1 are tabulated under
class M flares.
However, times of fade-outs are shown only for flares with an energy greater

than X-ray class M3.

DATE CLASS M CLASS X FADEOUT POSSIBLE
FLARES FLARES ON DAYLIGHT CIRCUIT
None observed

2.1 Comments on Solar Activity.
Solar activity was very low to low throughout the month, with no significant flare activity observed.
The 10cm flux declined to around 80 during the first week of November, and remained close to this level for the rest of the month.
The monthly sunspot number of 18.0 was the second lowest this year - only slightly higher than the value of 16.7 recorded in April. The 12-month smoothed value has fallen to 32.8 (May 1994) and this value has been falling more slowly in recent months than earlier in the decline of this cycle.
==========
3. GEOMAGNETIC DISTURBANCES (for Learmonth, WA)
DATE COMMENTS

6 November Active to major storm levels were observed during the first half of the UT day in the northern hemisphere.

20 November Active to minor storm levels were observed 06-15UT as part of a 3 month-old recurrent pattern of activity.

26-27 November Active to major storm levels were observed during the local night as part of a recurrent pattern of activity dating back to July this year.

3.1 Comments on Geomagnetic Activity.
Apart from the disturbances mentioned above, geomagnetic activity was at mostly quiet to unsettled levels throughout November. The highest A index for the month was 27 observed on 6 November.
==========
4. IONOSPHERIC DISTURBANCES (for Sydney)
DATE MUFs

5-6 November MUFs were 15-30% depressed during the local night on 5 November, then enhanced by 30-60% during the local day on 6 November.

20 November MUFs were 15-30% depressed from 17UT onwards.

27 November MUFs were depressed 15-30% during local daylight hours.

4.1 Comments on Ionospheric Conditions.
MUFs were regularly enhanced relative to monthly predicted values. Sporadic E layer was common throughout the month, with occasional night-time Spread F.

3611. IC-W2A Questions

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-05 00:46:13 UTC
From: auchd@orion.alaska.edu
Message-ID: <1994Dec4.204613.1@orion.alaska.edu>
Source record: 255599

I have a ICOM IC-W2A Dualbander.
While I have seen modification and enhancement files for the IC-W2AT, I have not seen any for the IC-W2a. Does anybody know of any enhancements/modifications for the IC-W2A

Thanks in advance
James Wiedle

>nothing at all or 20+wpm.

Greg:

Excellent point. It would be nice to see the CW enthusiasts stop bitching about those who aren't in the 20+ crowd and take the time to help them learn, or at least to be as understanding as possible. Obviously not everyone is going to like the code...those that do should be readily encouraged to participate in groups such as this. (Terrible acronymn, by the way. C.O.P.S has a much too negative connotation). At any rate, it would be nice to see the CW ops being as inclusive as possible.

Almost as nice as seeing the no-coders stop whining and take a little time to learn CW. :)

Keep going Greg, it only gets better with more speed. Good luck!

Excuse me? I guess I missed something here. I thought the original poster wanted to know the difference between a typical scanner and a receiver. The R-7000 is not a
scanner, it is a communications receiver.

You are saying that the R-7000 is a scanner because it tunes itself. I really don't know what you mean by tunes itself, but if you are talking about scanning between channels or memories, I guess you are correct then. In that sense then, just about every radio that I currently own is a scanner. My Motorla GP-300 will scan memory channels, my wife's FT-530 will scan in many formats, including memory channels, the radio in my Ford Aerostar will also scan in several formats, including next channel or next busy channel, the same for my wife's car, my 16 year old receiver/amp on my stereo also scans for the next busy channel, we have several TV's here in the house that scan up/down to the next busy channel when you push the channel u/down button. Oops, I forgot about my Icom 3210 dual band mobile scanner rig. It also scans in several formats.

Heck, I don't even know if we own a radio/TV that does not do some sort of scanning. I
guess we don't own any receivers at all, they are all just scanners.

I guess it just depends on what you call a scanner, and what you call a receiver.

You are correct the scanners, especially Radio Shack models cost much less, than my R-7000 scanner uh... receiver. I have done several things with my scanner/receiver that I doubt that the typical RS scanner will do. I have had it at several sites with very high R.F. environments listening for things like STL signals, clear 800 Mhz repeater channels, etc. It worked great, and was not blasted into oblivion with intermod. Heck, one of the local broadcast engineers borrowed it to make some relative signal strength readings with after his station moved transmitter sites and put up a new antenna. I really doubt that the RS is capable of any of the above. If they are, let me know, I might buy one and give it a try.

>

The Subject line of your messages says: 830s for sale, and the message itself says: TS820S for sale. Just thought you might want to know. $650 seems a little high for a TS820, so maybe you made a mistake in your message.

Not real sure, but I just found (on this board) its matching tuner,
the Harvey-Wells Bandmaster Z match coupler. Nice unit, built like
a tank for balanced lines. Good equipment.

I have heard the Harvey Wells transmitters advertised on our local swap
nets here (we have a swap net devoted to older tube radios), but never
noted the prices. Next weekend I can listen and ask for you if you don't
get any info here. Write to me via email if you want the info.

Vassili Leonov (leonov@iedv7.acd.com) wrote:
: Final questions to people opposing the code - what can you offer to
: replace it? Or these 3 reasons above don't matter?
: N2WID.

Once and for all I wish some folks would get it straight. Most
of us that debate the issue do NOT oppose the use, encouragement
or training of CW. We DO oppose the continued need to have
a 13/20wpm CW test element to gain access to most of the HF
frequencies.

Note also, that I and others have also suggested that perhaps
a sub-band of each of the HF bands could/should be established
as CW only with usage privaledges linked to a CW test element,
BUT that the access to all other HF band segemnts should NOT rely
on a 13 or 20wpm CW test element.

As to the original question above, no one is suggesting any
need to replace CW with anything. Those that are interested in
and enjoy using CW should be allowed to continue using it
forever.

> "alien" has to restrict himself to the part allowed in uk?

Never assume *anything*. That *IS* what I meant, and if you read the paragraph
you quoted from my original message, you'll see that is exactly what I said.

> Who {gives | gives info} on the US test? Is it RSGB?

Nope. The RSGB doesn't have the foresight to get involved in anything quite so
radical/useful as the topic we've been discussing. There are (approximately)
three VE teams currently active in the UK; one of which I'm personally very
involved with, another I'm slightly involved with, and one which I've just
heard about.

> But don't you still need a US address?

Yes. You need an address where the FCC can write to you to send your license,
Notices of Apparent Liability, orders to close down your station, etc. For
most folks I know, this seems to be either a friend's address, a US office of
their employer, or my PO Box number :-) The FCC's requirement for a *Station
Address* to be separately specified was dropped a while back.

You got it :-(Also power limit. (In practice, Europeans can forget an chance of 2m repeaters since most input above 146 with reciprocals!)

> Who {gives | gives info} on the US test? Is it RSGB?

Various groups called VECs authorise VEs (Volunteer Examiners). The ARRL and W5YI are the 2 largest VECs. There is an active group of ARRL VEs in UK. Perhaps also in Germany. Will email UK info if you wish. Try ARRL and W5YI first. (postmaster@arrl.org and 0003511297@mcimail.com resp.)

> But don't you still need a US address?

That's a prime requirement. FCC will revoke a license if mail is returned as undelivered. Remember it is only a mail address, such as a friend or relative. This is not a station or residence address.

Message-ID: <Ba93WKW.shuster5647@delphi.com>
Source record: 255600

I picked up a vertical 10-15-20 meter antenna from a friend. It is made by Mini Products Inc. of Erie, PA. They are no longer in business. The antenna is missing 3 of its brass rod radiators. They are 6" long and threaded at one end.

Does anyone know where I can get replacement radiators? There are 3 tiers of these radiators at both the bottom and the top of the unit, one pointing vertically and the bottom pointing horizontally.

Any suggestions?

There are a couple of relatively easy ways that you could test it. First would be to look at the output of the Pre Amp on a scope. You could look at input and output levels and see if there is any gain to the FET.

Oops, I just re-read your message. You said it was in a downconverter didn't you.

I better think of something else here. Oh, yeah, you might try checking the current draw of your downconverter. Low current draw usually indicates a blown Gaas Fet. Compare it to a working one, if possible, or maybe call Comm Concepts and ask what the current draw should be. That would be one easy test.

Was your unit a pre-built unit or a kit? Are you saying that you are not receiving ATV,
but you are receiving cable channel 9 through your downconverter? You must have a huge cable leak. What is on cable channel 9 in your area. Are you sure it is coming from a cable system, or is it a local channel 9? The frequency of cable channel 9 is the same as for regular channel 9 on broadcast TV, the cable channels change above channel 13 I believe. It sounds like you have something really screwy going on in your downconverter.

I have a PC Electronics downconverter here, and the only thing that I can receive through it is the local ATV repeater on 427.25 Mhz (cable ch. 58).

Good luck,

Rick, WB7UGZ Winton, Ca. rickmcm@delphi.com

I have the RS-20M and it handles my current needs quite well. Right now I
have a Yaesu FT-2400, a Realistic HTX-100, mobile scanner and AEA PK-88.
One advantage here is that typically only one radio is transmitting at a
time so I could probably add a few more radios. Astron makes very nice
power supplies, too.

>BECOME ONE. Maybe they mellowed out finally.

As others have pointed out, there is no law restricting sales of amateur gear. The only restriction is found in Part 97 of the FCC Rules and Regulations where it is illegal to transmit without an appropriate class license. There are many valid reasons for an unlicensed invidual to purchase amateur equipment -- studying to take the test and wants to listen in the interim, gifts for a loved one, etc. Consider a case in which a youngster here studied one summer and obtained his Technician class license. As a reward for passing the exam, and for keeping his grades up and generally being a 'good kid' [:-)], his unlicensed parents bought him a 2-meter radio.

This type of scenario is fairly common, and placing restrictions on the sales of amateur equipment could hinder the entrance of youngsters into an otherwise fine hobby. Besides, I have yet to tell a sales clerk whether I am licensed or not -- it isn't pertinent to the sale in my opinion.

3627. Ask ICOM on national radio show!

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-05 10:00:05 UTC
From: lenwink@indirect.com
Message-ID: <lenwink.303.0003007F@indirect.com>
Source record: 255555

Chris Luigi, Director of marketing & sales for ICOM, will be the special guest on the Ham Radio & More Show, Sunday 12/11/94, at 6:00pm EST. Call the toll free listener call-in line at 1-800-298-talk to ask your questions about products, etc. The show is available on the Talk America Network in many cities and via satellite on Spacenet 3, Transponder 9, 6.8 audio. For more info, call 602-241-1510.

In article <treit.77.001756A6@seanet.com>, treit@seanet.com says...
>
>As a CW enthusiast, I like this idea. However, I don't like the 15 WPM
>minimum requirement: isn't it a little pointless and counterproductive?
>If I love CW, and can only send 13 WPM at the moment, why exclude me?
>Anyone who wants to be a member of such an orgazation certainly should
>not be discouraged. Wanting to join in the first places ought to be
>proof of a persons love of CW.

>By the way, I'm thinking of others...I'm comfortable at 25 WPM

I agree, Mike. I successfully passed the 5wpm exam a couple of months ago and finally, last week, reached 13wpm. Although I'm still trying, I can't copy well at 15wpm yet. I don't see the point in restricting it to any particular speed, anyway. I hate to sound harsh, but this seems to be becoming the growing trend. No coders hate the know coders, and the know coders don't want anything to do with slow coders. It seems to be either nothing at all or 20+wpm.

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS News Bulletin 838 4th December 1994

Holiday dates for ANARTS

The ANARTS broadcast will go into recess after 18th December and resume on 15th January 1995.

If you have any last minute news items to go out before Christmas, send them to the Broadcast Officer ANARTS P.O. Box 860 Crows Nest 2065 by last post on 16th December.

We will see you again on January 15th, refreshed and raring to go.

IPS WEEKLY REPORT
---
25 NOVEMBER - 01 DECEMBER

DATE OF ISSUE: 02 DECEMBER 1994

INDICES:

DATE 25 26 27 28 29 30 01
10CM 82 83 80 80 80 78 79
A 3 24 18 12 8 16 (10 ESTIMATED)
T 3 31 -15 19 24 40 6

SOLAR ACTIVITY WAS VERY LOW, EXCEPT FOR 16TH NOVEMBER WHEN IT WAS LOW.

THE GEOMAGNETIC FIELD AT LEARMONTH WAS QUIET ON 25TH, THEN WENT TO MAJOR STORM LEVELS ON 26TH, DECREASING TO ACTIVE TO MINOR STORM LEVELS DURING LOCAL NIGHT ON 26TH, THEN QUIET OR QUIET TO UNSETTLED FOR THE REMAINDER OF THE PERIOD.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE DEPRESSED ABOUT 15 PER CENT ON 25TH, THEN NEAR PREDICTED 26TH AND 28TH-29TH NOVEMBER. fREQUENCIES WERE DEPRESSED 15-30 PER CENT DURING LOCAL NIGHT ON 27TH, 15-20 PER CENT ABOVE ON 30TH, AND NEAR PREDICTED TO SLIGHTLY DEPRESSED ON 1ST DECEMBER.

FORECAST (02 NOVEMBER - 08 DECEMBER)

SOLAR: VERY LOW

GEOMAGNETIC: QUIET TO UNSETTLED.

IONOSPHERIC: SLIGHTLY DEGRADED HF COMMS EXPECTED 2-3
DECEMBER, NEAR NORMAL OTHERWISE.

The TARA RTTY Sprint contest, a four hour funfest on 80, 40, 20, 15 and 10M, runs from 2100Z Saturday 10 Dec. to 0100Z Sunday 11 Dec. Rules are the same as the ARRL RTTY Roundup. You can use the same logging software. For details see the Digital Journal, November 1994, p. 31. (And look for K8UNP/4 operating from either ZB2 or EA7 in the test.) Logs go to Bill Eddy, c/o TARA, 2204 22nd St., Troy, NY 12180 by 17 Jan. 1995.

Send your bandpass and Notes of Interest for next week's bulletin to Bob WB2CJL at W5KSI.#NOLA.LA.USA.NA or at ZS5S.ZAF.AF.

73 es Good Hunting de Jules W2JGR at W5KSI.#NOLA.LA.USA.NA

[via HF AMTOR]

ARLDX71

The items in this week's bulletin are courtesy of Rudi, DK7PE, Rob, ND3A, Jacques, W2/F2YS, Tedd, KB8NW, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral Column from the pages of QST magazine. Thanks.

VIETNAM. Rolf, SM5MX, aka 4S7MX and 5Z4MX, is active from Hanoi signing XV7SW. Listen for his fixed frequency CW on 3505, 7033, 14016, 14021, 21019 and 28016 kHz. QSL via Rolf T. Salme, Embassy of Sweden, Box 9, Hanoi, Vietnam.

NEPAL. Willi, OE7KWT, is signing 9N1WT using the station of 9N1KY. He uses 21270 and 14270 kHz around 0800z but has been on the 14226 DX net around 1145z. QSL via OE7KWT.

TUNISIA. JH2CFD, JF2EZA, JR2RVL and JL2OYI are instructing Tunisians on amateur radio operations and plan to set up a club station. Equipment will include a monobander on 15 meters, a tribander, dipoles for the low bands and barefoot transceiver. The club call sign is 3V8BB. Try 14025 and 14195 kHz around 0700z. QSL via JF2EZA.

GLORIOSO. Jacques, FR5ZU/G, will be going home on December 1. It was reported earlier that the departure date was December 8. QSL via VE2NW. Henri, FR5ZQ, who is also on the island at this time, will take over for Jacques and is expected to be active through the end of the year. QSL via CBA.

KERMADEC ISLAND. Barry, G4MFW, aka ZS1FJ, has obtained a license and plans to operate for two weeks starting sometime in March. Arrangements for a stateside QSL Manager are being made.

GOLIST NEWS. Jay and Jan O'Brien of the "The W6GO/K6HHD QSL Manager List" have decided to retire after many years of dedicated service to DXers. Paul and Nancy Smith, N4FFO and KB4RGW, will be taking over the QSL Manager List, aka The GOLIST, so the SHOW/QSL and SHOW/GO functions on PacketCluster will remain intact.

PIRATE'S COVE. Rudi, DK7PE, phoned the DXCC Desk on November 22. claiming that stations ST0CW and SU2CW that were on the air November 11 and 12 were pirates. They gave DK7PE as their QSL manager.

GL.

Coming events

December 10th-1th TARA RTTY Sprint
2100z Sat.-0100z Sun.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD, or the Secretary (Pat) VK2JPA at VK2RWI.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA at VK2RWI. Email addresses for the Broadcast Officer are : patl(at)pitt.conmusic.su.oz.au
The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer
That concludes the broadcast for this morning/evening.

Some amateur frequencies are certainly protected. Others were always just on a secondary usage usually with DOD. As DOD loses frequencies which we share and these are auctioned to others, our ability to use on a secondary basis with non interference will become more difficult.

However, many of these frequencies are above any currently in widespread use in the ham community. Generally, most hams want to congregate around the HF bands so they can push the technology in this unknown frequency range :-) or around 2m/70cm so that they can worry about why they can't get on HF with their ticket or how ham radio is being ruined by newcomers. There aren't many playing above 70cm too much although 23 cm is coming along a little and the phase 3D Amsat program may push some above that.

On the whole, frequencies we have access to aren't being used. If we don't intend to use them because we are really only interested in HF or 2M/70cm, I say let the FCC auction them all off. We can't honestly insist on holding a majority of the spectrum for our "maybe" use when the money can be effectively used by the government and the spectrum by the commercial
communications industry. If this wipes us out as a group, then it is our fault and not the government's selling of things we could but don't use.

Erich

3633. Re: Telephone RFI

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-05 14:04:58 UTC
From: ehare@arrl.org
Message-ID: <1994Dec5.140458.1645@arrl.org>
Source record: 255635

Brian Kantor (brian@nothing.ucsd.edu) wrote:

: TELEPHONE INTERFERENCE SURVEY

The FCC Telephone-Interference Survey -- a Followup

When the report of the FCC survey arrived here in the Lab, I was pleased! It contains useful data about telephone interference. As I read the survey, I noticed that out of the 108 transmitting stations involved, 27 were amateur. I was surprised that not one of the 27 hams had called the ARRL RFI desk to say "The FCC van just pulled up!"

I was also surprised when I read the FCC conclusion that telephone filters "can't be relied on to eliminate telephone interference." The FCC report indicates that filters were only effective in about one third of the cases. My experience and the experiences of telephone-filter manufacturers are that filters work in a much higher percentage of cases. Here is some additional information that may help improve the success rate of filters.

There are many variables that affect telephone filtering. The most important is frequency. Most telephone-EMI filters are optimized for specific frequency ranges. A filter designed for the HF band is not effective on the AM-broadcast band, for example.

Separate filters are often required for telephone lines and handsets. A handset cord can pick up an RF signal from an HF or VHF station. Some telephones require the use of a handset filter.

In stubborn cases of RFI, it is often necessary to use multiple filters, primarily to break up resonance in telephone wiring. This is not always a practical solution, especially with a neighbor's installation. You (or the FCC) should not modify a neighbor's telephone wiring; this is a job for qualified repair personnel.

Some telephones are so susceptible to interference that it takes a multiple-solution approach to solve the problem. Properly selected and installed filters solve many problems. The survey report included a list of filters that were effective most of the time under the test conditions used in the survey. Some filter manufacturers offer detailed installation notes and personal assistance.

"Bulletproof" telephones can eliminate interference. The FCC reported that they were 96% effective. The reports received by the Lab support that conclusion. A bulletproof phone is an excellent

troubleshooting tool. They have one major drawback -- they lack all of the bells and whistles that are important to some consumers.

Telephone interference can be cured! Often, a combination of immune telephones, multiple filters and troubleshooting techniques is required to have a complete solution.

The ARRL has several publications available to help. The book, Radio Frequency Interference: How to Find It and Fix It has a chapter on telephone interference. In addition, a Technical Information Service information package ("EMI/RFI - Telephone") is available for an SASE with two units of first-class postage. If, after you have read our literature you could use some expert help, contact the ARRL RFI desk or your section Technical Coordinator. -- Ed Hare, KA1CV, ARRL Laboratory Supervisor

Lab Notes Interference Primer -- Part 3 Telephone Interference
Conducted By Steve Ford, WB81MY, Assistant Technical Editor and the ARRL Laboratory Staff

Just when you thought it was safe to go back in the shack, Ed Hare, KA1CV, ARRL Laboratory Supervisor, is at it again! This time his topic is telephone interference -- the bane of every amateur who has to go QRT whenever a telephone rings! -- WB81MY

The cures for telephone interference are usually fairly easy to understand and implement, but there are often other issues that need to be addressed. Technical issues are really the second half of an interference problem. First and foremost you must deal with personal and political matters. The February and March 1992 QST Lab Notes columns (retrieve the file emi-gen from the ARRL Information Mail Server) discussed the non-technical side of interference. Read these columns again to refresh your memory. They've been reprinted in the ARRL Technical Department "RFI Package. (Note 2) The "RFI Package" also contains a copy of our new RFI consumer pamphlet plus an up to date "ARRL RFI Resources Directory." The Directory tells you where to buy filters, identifies several EMI-resistant telephones and has a contact list for telephone manufacturers. Much of the information in this file is found in the emi-gen file -- those with an actual interference problem should get the paper file from the Technical Department.

See note 2 at the end of this file.

Now, let's answer your questions!

Q: I was about two minutes into a QSO with a ham in Outer Elbonia when my doorbell starting bonging like crazy. It was my neighbor Sam, telling me that I was interfering with his new telephone. I tried to tell Sam that it might be the fault of his telephone, but he wasn't convinced. He insisted I was wrong because it's a brand-new model! According to the salesperson, his telephone is the very best one on the market. What's the deal, Mr. EMI wizard?

A: We'll have to break the bad news to Sam gently, but let's begin by establishing the fact that interference to telephones is not the fault of the transmitter. A quick quote from the FCC's Interference Handbook (Note 3) should explain things clearly: "Telephones, stereos, computers, electronic organs and home intercom devices can receive interference from nearby radio transmitters. When this happens, the device improperly functions as a radio receiver. Proper shielding or filtering can eliminate such interference. "

The FCC doesn't require that telephones include EMI protection and they don't offer legal protection to users of telephones that are susceptible to interference. If you show this to Sam, he should realize that the interference is not caused by a problem on your end. Fig I pretty much sums up telephone interference at a glance!

This doesn't mean you should leave Sam on his own, though. You want to be on good terms with your neighbors; besides, maybe you'll want to put up a tower someday. Keeping Sam on your side is a good idea!

Q: Fine, but what can I do?

A: If you can reduce the strength of your signal at the telephone equipment or cables, you may reduce the chance that any of your neighbors will experience telephone interference. If practical, try moving your antenna or feed line farther away from (or higher than) his equipment. Using a common-mode choke on the feed line may help. (See Fig 2).

Q: Well, I must confess that I've been interfering with the telephones in my own home, too. I remember your advice to make sure my own house is clean. Should I start here?

A: You betcha! There are several good reasons to start in your own home. If you own your telephone wiring, you have the flexibility to try many different troubleshooting steps easily. If there are problems with Sam's telephone wiring system, however, you'll probably want to call a professional (often your local telephone company) to do the actual repairs. By performing repairs on Sam's wiring, you may be held liable for any problems that occur -- even

if the problem is with his toaster.

If you lack experience, you may want to hire local experts for your own wiring, too. Before you start troubleshooting your system, check with your local regulators. There may be state or local requirements that must be met.

There's another good reason to start with your own house: You'll be able to demonstrate that EMI cures are not only effective, they're harmless. The next time Sam complains about interference to his telephone, invite him to come over and try your telephone instead! By using your telephone when you're on the air, he'll quickly understand that the problem must be on his end.

Q: Okay, I'm ready. Where do I begin?

A: Read the March 1992 "Lab Notes" column and review some of the troubleshooting techniques. You can also learn quite a bit about troubleshooting telephone EMI problems from the troubleshooting and telephone chapters of the ARRL book Radio Frequency Interference -- How to Find It and Fix It. (Note 4)

Rule number one: Simplify the problem! If your home telephone system consists of eight two-line outlets with a telephone in each room, two answering machines, a modem and a fax machine, it may take quite a while to get it all straightened out. Simplifying the problem saves lots of time and headaches!

Most cases of interference stem from more than one cause. If you start with a systematic approach to troubleshooting -- debugging and fixing the problems one at a time -- you can usually resolve the interference quickly. Disconnect all but one telephone. Cure the EMI bugs (usually with the proper application of filters), then begin adding other devices one a time, curing each EMI problem as you go. With any luck you'll complete the process with an EMI-free system. If not, at least you'll identify the specific equipment that's not immune.

In modern installations, telephone companies often install a phone jack where the wiring enters the house. This jack makes it easy to unplug the rest of the house wiring and substitute a telephone in its place. If you have access to an EMI-resistant telephone (refer to the ARRL "RFI Package"), you can try that phone at the service entrance (drop). If the EMI-resistant telephone doesn't pick up interference at that point, you've eliminated the telephone company system as a possible culprit.

In many cases, the telephone company is responsible for their lines only up to the point where they attach to the customer's wiring and equipment.

Q: Uh, oh! I plugged in my EMI-resistant phone and I still hear interference. What does this mean?

A: It sounds like this is a problem for the telephone company. For example, the telephone-company lightning arrestor may be defective. Defective arrestors can act like diodes, rectifying any nearby RF energy (just like the crystal radios many of us built when we were kids). Telephone-line amplifiers or other electronic equipment may also be at fault. Leave the telephone company equipment to the experts. There are important safety issues that are the sole responsibility of the telephone company.

In your case, the EMI-resistant telephone is probably responding to the audio that's present after the "diode" as a result of RF rectification. Once the RF has been detected and turned into audio, it cannot be filtered out because the interference is at the, same frequency as the desired audio signal. This principle applies whether rectification occurs in the telephone company system, your house wiring or a defective telephone or answering machine in your home.

Q: Well, I got the phone company repair personnel out here. They found a defective lightning protector. After they replaced it, I plugged my EMI-resistant telephone into the service entrance and it sounded fine. As soon as I reconnected the house wiring, the interference returned. What now

A: Replacing the arrestor wasn't a waste of time. Lightning arrestors are notorious for contributing to telephone EMI. This is especially true when the protector has done its job a few times! The fact that it's rectifying RF is one indication that it needed to be replaced anyway.

By plugging your EMI-resistant telephone in at the service entrance and finding no problems, you've proven that the EMI-resistant telephone and the phone system are clean. When the problem reappears after you reconnect the house wiring, the house wiring itself is the prime suspect.

A careful inspection of the wiring may reveal the source of the problem. Years of exposure in damp basements, walls or crawl spaces may have caused deterioration. Be suspicious of splices that are corroded or badly discolored. Metal corrosion can form a fairly efficient diode, especially if dissimilar metals make contact. If you find this type of corrosion, correct the problem by repairing the splices.

In many cases, homeowners have installed their own telephone wiring, often using substandard wiring. If you find sections of telephone wiring made from two-conductor zip cord, 300-ohm television twin lead, or some other mystery cable, replace it with standard twisted-pair wire. Radio Shack, among others, sells several types of telephone wire. The best telephone wiring systems use twisted-pair, balanced wiring to minimize pickup of external electromagnetic fields. If this system becomes unbalanced in some way, perhaps by one of the wires developing a short circuit to a

nearby conductor, the amount of RF picked up by the wiring will increase. Keep your eyes open for this type of problem when examining your existing twisted-pair wiring.

Don't forget to consider hidden, unexpected connections to the telephone line. If your telephone line is hard-wired to your automated alarm system, for example, you really haven't simplified the problem completely -- there's still something hooked up to the line!

Q: Bingo! I'd forgotten about the alarm system. When I disconnect the telephone line from the alarm box, my EMI-resistant telephone works fine in every house outlet. Why did the alarm system cause the problem?

A: Well, I can't be sure without seeing the schematic. My guess is that the RF was being conducted down the telephone line and rectified by a solid-state device in the alarm system. The resulting audio signal was then placed back on the line. This effect is not uncommon with alarm systems, answering machines, fax systems and modems.

Q: I have a service contract, so I called the alarm company. After a bit of discussion (which included a lot of pointing at the FCC Interference Handbook), the service installer agreed that he should cure the problem. Neither of us knows where to begin, though. Any ideas?

A: You'll sometimes find that a manufacturer or utility company is willing to responsibly address an interference problem, but lacks the experience and training necessary to apply the correct solutions. You may need to apply your skills (and those of your ARRL Section Technical Coordinator or local RFI committee) to help their personnel understand the technical issues.

Start by installing a commercially available telephone EMI filter on the alarm system line. Several companies advertise these filters in QST. A list is also included in the Technical Department "RFI Package." If the unwanted RF energy is being conducted into the alarm system by the telephone wiring, this filter will block the energy from the components that are detecting the RF signal. As you can see in Fig 3, these modular filters are attractive -- your family or neighbors probably won't object to them on aesthetic grounds.

If the telephone filter doesn't work, try installing a common-mode choke on the ac line cord that supplies power to the alarm system. It may also be necessary to use a differential-mode ac line filter (the commonly available "brute force" filter) on the ac-line cord as well.

If all else fails, it may be necessary to modify the alarm system. This is another job for the experts. Suggest that the repair

person contact the manufacturer.

These methods apply to any device connected to the telephone system: your alarm, modem, answering machine and so on. Ac line-connected devices are much more prone to interference. After all, they offer two possible paths for the RF to enter: through the phone line and the ac line. In extreme cases, check any other wiring that connects to the susceptible device, including alarm system wiring and computer cables.

Q: Great! The filters worked. I n plug in all my goodies and go back to happy hamming!

A: Whoa! Don't jump to conclusions! In addition to the gremlins you have uncovered so far, you may still have susceptibility problems with some of your telephones or your answering machine. Plug them in one at a time and see what happens.

Q: %%^%^%^%#@%^! The first two telephones worked, but my high-tech bells-and-whistles telephone hears my 40-meter signal just fine! It's my most expensive telephone! Why is it defective? And why just 40 meters? What should I do?
***

A: There are two types of telephones that seem to be most susceptible: the inexpensive ones that have virtually no shielding or filtering, and the expensive ones that have many solid-state devices rectifying RF signals. Of course, telephones that fall between these two categories have problems, too !

There may be several reasons why your gee-whiz telephone is particularly susceptible to interference from your 40-meter signal. For example, internal resonances in the telephone circuitry may allow more 40-meter RF energy to reach the susceptible component inside the telephone. However, in this case, it's more likely that the telephone wiring in your home is resonant on 40 meters. The telephone wiring, its associated grounds and any other equipment connected to the system form a large antenna. Like any antenna, this system has high- and low-impedance points. If the telephone happens to be located at one of these nodes (either high- or low-impedance) it may be subject to quite a bit of RF energy.

Q: Wow! What can I do about it?

A: Try a commercially available in-line modular telephone filter. These should be installed on the telephone line, as close to the telephone as possible, or on the handset. Telephone EMI filters are made by several different manufacturers and come in several varieties. The ARRL Laboratory Engineers have received reports from the field that the effectiveness of these filters varies from installation to installation, possibly dependent on the exact nature of resonances, impedances and system reactances. Many of

these factors are hard to predict, so be prepared to experiment with several different manufacturers' filters in difficult cases.

You may also need to break up the resonances in the telephone wiring. Several manufacturers sell telephone EMI filters that can be installed at strategic points to detune the resonances. This is similar to the effect of using insulators to break up the guy wires on a tower to prevent them from resonating at amateur frequencies.

Q: I thought I was finished until I got to my answering machine. When I hooked it back up, every telephone in the house had interference again. It sounds awful! What should I do?

A: It's just a coincidence that your answering machine is doing this. It could just as easily have been one of your telephones -- but it does give me a chance to give you two answers to one question (heh, heh!). Yours is a situation in which one susceptible device is detecting the RF energy and putting the resultant audio signal back on the telephone line.

You should do the same things to the answering machine (or any other ac-line connected telephone device) that you did to the alarm system. Install a telephone line filter and don't forget to add a common-mode choke and a brute force ac-line filter on the answering machine line cord. This should clear up most cases of interference to these devices.

Q: It sure did. . . but I need to bother you again! I have one telephone that's a real bear to fix. I've tried several different filters to no effect. Should r take it apart and put some filters inside?

A: No! The manufacturer is responsible for the proper operation and repair of the telephone. The ARRL encourages all people who have an interference problem to contact the manufacturer of the susceptible device through the Electronic Industries Association, 2001 Pennsylvania Ave NW, Washington DC 20006. This helps ensure that the manufacturers (and their national association) are aware of the interference problems their customers are experiencing. Remember: interference that isn't reported of officially doesn't exist! (Our "RFI Package" includes a report form -- please use it!) Some manufacturers supply filters free of charge. We've even heard reports of major telephone manufacturers giving refunds for defective telephones.

Some consumer devices are so susceptible they can't be filtered externally. If the manufacturer is unable to help, the best solution might be to give the telephone to someone who lives far away from your transmitter and purchase an EMI-resistant telephone to replace it!

Q: What about my cordless telephone? It seems to pick up interference no matter what I do. Is there anything that will cure the problem?

A: The FCC does not intend Part 15 devices to be protected from interference. These devices usually have receivers with very wide front-end filtering, making them very susceptible to interference. A cordless telephone is a Part 15 device. It's an unlicensed transceiver that shares the spectrum with other users and services on a non-interference basis. There should be a label on the telephone, or a paragraph in the owner's manual, that explains that the telephone must not cause interference to other services, and must tolerate any interference caused to it.

It's worthwhile to try a telephone filter on the base unit and properly filter its ac line cord. (You might get lucky!) The best source of help is the manufacturer, but they may point out that the Part 15 device is not protected from interference. These types of problems are difficult to fix after the fact. The necessary engineering should be done when the device is designed.

Q: Yeah, that did it. Now my family can use the telephone while I'm on the air. My teen-agers thank you. I guess it 's time to pay Sam a visit. Any last-minute words of wisdom?

A: Don't forget money issues. Telephone companies often charge to come out and repair wiring. Repairing consumer electronic equipment usually isn't free, and telephone EMI filters require a bit of wallet-digging, too! You and Sam should discuss these issues up front, before you order filters or call the service department. You're not responsible for purchasing filters or repairing defects in your neighbor's house wiring. If you want to be neighborly and buy a filter for Sam, that's your choice. However, doing so may set a precedent. If you live in an apartment building where there are hundreds of telephones to contend with, you may have to re-evaluate your generosity!

Telephone interference is like any other EMI problem -- it usually can be cured by properly applying good troubleshooting techniques and effective filters.

Re: RFI-resistant telephone

Lewis Cullen, an Alabama ATC (now TS) reports to me that Radio Shack ET-171, catalog #43-374A has adequate EMI suppression. He reports that it is quite immune to his 1200 watt station. Other telephones tried, notably the AT&T Trimline, do not exhibit this immunity. The telephone is also sold in other colors as catalog numbers 43-375A, 43-376A and 43-377A.

I've been working part-time at Radio Shack for a bit over two years. I've been through all their sales training programs and am a "certified sales specialist" (for what that's worth). No Where, in any of the materials that I've seen, does the company require a license to sell or to buy an amateur band radio. They *DO* make a point of saying that a license is required to tramsmit.

3636. 73cm propagation mysteries

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-05 14:27:30 UTC
From: pruth@ocvaxa.cc.oberlin.edu

Source record: 255630

I have been trying to use 73cm as I use 2M, and am stymied. Stations I work simplex on 2M with good copy disappear when we try 73cm. A local repeater with a "talking S-meter" gives me reports that my signal is S9+10 for a day or two, then it drops to S6 and stays there for days. I use a high-gain vertical base station antenna which has been stabilized to eliminate flexing in the wind, and all my connections are weatherproof. What factors affect 73cm propagation from fixed point to fixed point? And can anyone tell me what 73cm is good for...some of the folks around here are expresssing regret that they ever bothered with 73cm. Are there any redeeming qualities of 73cm I don't know about? And is it true that 73cm has more tropospheric enhancement than 2M, as one of my resource books claims? Thanks for your response.

This simply doesn't work, and I got proof. The city of Huntsville, Alabama and the surrounding Madison county got together and BOUGHT a doppler radar setup and donated it to the local NWSO. Now, in the infinite wisdom of the NWS Modernization Plan, our local NWSO is to be closed and the radar (that we the citizens and local businesses bought) is to be decommisioned.

A congressional hearing was held here in town on July 19 regarding this issue, and the response was almost overwhelming (the polits who were there were astounded at how many showed up) and most of the folks at the show were hams!

We got trained spotters, we got SkyWarn nets, we got participants in the NWSO looking at the radar and linking into the net, and still the NWS wants it all shut down! They think the NEXRAD systems in Birmingham (~~100Miles) and Nashville TN (~~90 Miles) can cover us.

Statistically, North Alabama is one of the worst sites in the entire nation with regard to tornadoes, even when compared to "tornado alley" in the midwest - we have almost as many, but ours tend to be much stronger. Fully 25% of the deaths in Alabama attributable to bad weather have occurred in Madison county due to tornadoes. During a "meso-cyclone" in Early July this year, the SkyWarn net rep in the NWSO announced there was circulation in an area NW of me and headed SE. I and my family took cover, and it came through the neighborhood. We were lucky - lots of houses in my neighborhood received significant damage.

In my opinion, depending on the "trained professionals" is analogous to turning the weather radio off, the TV off, the HT off, putting on earplugs and glueing my eyelids shut.

The hams _are_ the real professionals.

From a beginners point of view, it seems kinda silly. I am trying to embrace ham radio, be a good citizen of the airwaves etc. I got my codeless tech in April of this year. I am not stupid, I have a bs in engineering and an ms in computer science. It is beyond my understanding why I have to learn Morse code to expand my frequency range, but I am willing to try.

I feel morse code is a lot like requiring my daughter to learn to do blacksmithing and how to install horseshoes before she is allowed to drive the car. The technology is archaic, of limited use and applicability, but I am required to learn it in order to advance. I have sat and tried to learn the blasted code, and I can't even discern the difference between a dit and a dah. I have no ear for it, so therefore I can never attain a higher license clsssification. Morse code has its place, and my hats off to those who have mastered it, but its a real bugger for me. I will probably never advance beyond codeless tech because of it.

Oh well. I can at least listen to the HF and play with the TNC.

"Hey Billy Bubba! Ya get yer radidio workin' yet??"

But seriously...

>Let's hear from those in the mid-West who work jointly with the
>National Weather Service as tornado spotters.

Hi Jeff!

Despite the never-ending blood-bath we are involved in over in rrap,
I agree with you here. Surprised?

There is a great deal of interest in weather nets here in the Milwaukee
area (and the rest of the state of Wisconsin).

Despite a state-of-the-art NOAA dopler radar facility going on line just a year
ago about 40 miles West of Milwaukee (which I was fortunate enough to visit
and even get a little HANDS ON! , thanks to a local ARES group), the NOAA
maintains and actively uses a VHF amateur radio station (located in the same
control room as the dopler equipment) to access a multi-repeater weather
net that is online and active whenever severe weather warnings/watches
are in effect. (Milwaukee 146.67 ARES repeater, among others).

The NOAA / ARES team is typically 5 to 7 minutes ahead of any local
newsmedia as far as warnings and status reports. Five minutes can
mean a lot when a tornado is aloft or has the potential of forming.

On the other hand, cell phones typically provide more than enough
coverage and reliability in an area of destruction as "narrow" as the
path of a tornado. But still, amateur radio operators are there for
those who do not have such capability.

As far as wide scale disasters (or even armageddon), I'd rather have
narrow-band amateur radio. Still, I REFUSE to ignore the possibility that
we will all be made obsolete IN THE FUTURE by evolving global
satellite telecommunications systems and strategies. As far as
technical skills and being aware of the state-of-the-art, I'd rather
see amateur radio error on the side of caution than assuming we will
never be made obsolete. As you know Jeff, it is my opinion that

amateur radio does the latter.

You might check out another organization (their name is FISTS or something similar). I think they're headquartered in the UK but they have a US liaison, NZ8C (Nancy) somewhere in Michigan. Perhaps a cooperative effort with them would be of help to you in getting started. I note one difference in that they specifically seem aimed at "newcomers" and your 15wpm floor aims you at more "experienced" folks.

>Here we go again. The FCC does not get to keep or spend
>any of the money that comes into it as fees. All that
>money goes into the general fund and it's allocation
>is handled by Congress. Now, knowing that none of the
>money that hams pay to get these vanity callsigns are going
>to go to actually helping police or improve the Amateur
>Service, do you still think it's reasonable??

Actually it's a moot point now, because the legislation to
allow the "one time" fee did not get to the floor of either
house for a vote (GATT crowded it out). Unless the
legislation is re-introduced in the next congress, we will
be stuck with a yearly fee ($7.00 per year to start?)

But..... this legislation was written to specifically funnel
that fee directly to the FCC.

If you think ARRL should pursue reintroduction in the next
congress, contact your Division Director. (And do it NOW
because time is of the essence.)

>'But it's illegal!'

>Guffaw.

But it IS most certainly illegal to monitor cellular and cordless conversations out here in California.

>"If something comes into my house, and passes through my body, and my childrens body, and my pets body, I feel that I have a right to investigate it! If they dont want people to listen to broadcasts, then they should prevent that broadcast from entering my home."

This, of course, is an ignorant argument, that should not - and will not - hold up in a court of law.

I would greatly appreciate any information available on the conversion of a VHF Motorola Micor receiver and/or transmitter for use in the 220MHz band. I have heard form several sources that this conversion can be done, but I haven't been able to find out how yet.

-Thanks

Grady:

Your attitude about the use of ham radio in emergencies directly contradicts that of the FCC. In fact it is one of the major reasons for the existence of the Amateur Radio Service. Attitudes like your's only adds fuel to the movement to take away ham radio frequency allocations and sell them.

Our local EMA (formerly ESDA) group is 80% hams. We are trained weather spotters and provide emergency communication capabilities with amateur equipment. The local government seems to think this is important enough to support it financially. The debate about using cell phones in a disaster always points to examples when this mode of communication becomes unusable - capacity is met very quickly in a disaster situation.

To refresh your memory about what ham radio is all about:

97.1 Basis and purpose. The rules and regulations in this part are designed to provide an amateur radio service having a fundamental purpose as expressed in the following principles:

(a) Recognition and enhancement of the value of the amateur
service to the public as a voluntary noncommercial communication service,
particularly with respect to providing emergency communications.

(b) Continuation and extension of the amateur's proven
ability to contribute to the advancement of the radio art.

(c) Encouragement and improvement of the amateur service
through rules which provide for advancing skills in both the communication
and technical phases of the art.

(d) Expansion of the existing reservoir within the amateur
radio service of trained operators, technicians, and electronics experts.

(e) Continuation and extension of the amateur's unique
ability to enhance international goodwill.

How long will ham radio continue to exist?

You would advocate the removal of part (a).
With all the appliance operators out there, (b) is shot.
Ditto for (c).
Ditto for (d).
The no-code techs will soon be the majority of hams. Since they don't have hf
priviledges, there goes (e).

So, how do you propose to keep ham radio alive?

John Shuster <shuster5647@delphi.com> writes:

I picked up a vertical 10-15-20 meter antenna from a friend. It is
made by Mini Products Inc. of Erie, PA. They are no longer in
business. The antenna is missing 3 of its brass rod radiators.
They are 6" long and threaded at one end.

Does anyone know where I can get replacement radiators? There are
3 tiers of these radiators at both the bottom and the top of the
unit, one pointing vertically and the bottom pointing horizontally.

Any suggestions?

Off hand, John, I'd suggest getting 18 inches of the appropriate diameter
brass rod, cutting it into 6 inch sections, and threading one end. :-) I
recovered a nice $80.00 discone that way for about $10.00.

I agree with that code keeps a lot of good people out of the hobby.
I managed to pass my 21 wpm test after many retries on the test and
have never gone back to do any cw. I needed to HF license to help
with education activities and organizing comm for events. I am a
firm believer that code is important since in the face of sever band conditions it maybe the only way to get the message across. In
several cases it was the only way to exchange information.

3654. Ham Radio for Emergencies (was HAM Frequency Allocations)

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-05 18:49:16 UTC
From: William_A._Kirsanoff@ccmail.anatcp.rockwell.COM
Message-ID: <9411057866.AA786653498@smtpgty.anatcp.rockwell.com>
Source record: 255639

Grady Ward <gradyD043zw.2fs@netcom.com> has noted his objections to the use of amateur radio for emergency communications in several recent posts. I disagree with many of Grady's assertions. First of all, Grady feels that "The only time amateur radio ought be used for an *emergency* is when the FCC *declares* one." This is foolishness. As one who lives in an earthquake zone, Grady should know better. After the January 17th quake this year, emergency services volunteers in my city had 30 net check-ins before the shaking stopped. We went on to provide a quick damage assessment that was complete within 15 minutes and covered a wide area of the city. We were lucky, little damage this time. Had this been the *big one*, we have designated evacuation centers that we open up and operate. They have packet stations in place ready to network to the city EOC and/or the mobile command post. We don't expect to have time for Washington to determine there has been an earthquake, what the magnitude is, did the governor declare an emergency . . .

Grady feels that ". . . it is *very* poor public policy to *rely* upon [hams] as we might rely upon a sworn, paid emergency worker." Again, I disagree, and so do many in emergency management. Grady would like to think that satellite communications and cell phones are the answer, but that is not reality. In urban centers, cell sites get saturated instantly in an emergency. During the fires last year, battalion chiefs using cell phones would keep the line open once they got through, just so they would not loose the line. Satellites are just not used for this type of communication, and there are limited frequencies for use where they are used.

Radio amateurs have major advantages over land-mobile communication systems in an emergency: we are frequency agile, thereby increasing the available bandwidth considerably. In many areas, lack of radio communication resources is not so much a matter of the agency being to *cheap* , as Grady implies, to pay for reliable communications, but a lack of available spectrum. Of course, if more spectrum allocation for local government were necessary, and if amateur radio is not a good resource for emergency communication, perhaps amateur spectrum could be reallocated. :-) Think about that. We can setup, operate, and maintain networks with minimal equipment because we know how it works, that's our "job". Sworn police officers and fire personnel are radio users, if it does not work, they can't tell you why, nor should they, have other jobs to do in an emergency. We provide increased manpower in an emergency, government can not and should not routinely staff for disaster level needs, that is why so much disaster aid is provided by *trained* volunteers, like the Red Cross, Salvation Army, and yes, Amateur Radio.

This has become a rather long post, but I think it is important to understand that the amateur radio *service* has an important role in emergencies, big and small. Many amateurs do receive training not only as communicators, but as incident first responders so that we do know what to do at an emergency scene.

And we are relied upon by many government agencies, from FEMA to the local constable. I am fortunate in that I live in a city that actively supports the emergency services role of radio amateurs, provides training and facilities for volunteers, and has us formally integrated to the local disaster plans. I know that my community is safer for it, and I know that I can serve my community by being a volunteer.

Part 4. Procedures

4A. Silent Periods (SP)

The first thing an op coming on watch does is to check his clock against WWV (ITU regs!), for certain actions on 500 have to be timed down to the second. In the log it goes:

OBTAINED WWVH TIME TICK - CLOCK CORRECT 2500KC 0900Z

Because of the steady stream of signals on 500 a weak station sending a distress msg might not be heard. And at one time, calls AND traffic were passed on 500 - there was no shifting to working frequencies to pass messages. Thus silent periods were created. These consist of two three-minute intervals, in which worldwide no one transmits - volume controls are turned up - ears are pressed to the speaker grill - one's breath is held, from minute :15 to minute :18, and again from minute :45 to minute :48. Even traffic being passed on working frequencies would stop. For example, if I were sending the WX on 440kc:

...HIGH PRESSURE 1028MB 35.8N 132.3W BT CQ CQ CQ DE NMO AS SP SP AR

at which point myself and my listening audience would shift back up to 500 for that particular 3 minutes.

Whoa to the station whose clock is off or who forgets the SP, for a half dozen stations might jump on him:

VLA VLA VLA DE 3FWR 3FWR K
QRT SP SP
SRI
SP
OK SRI
SP SP

(the ship 3FWR calls the shore station VLA - someone breaks in to tell him to stop transmitting; he responds with `sorry' and is still scolded, says he's sorry a second time, and is scolded again),

although someone somewhere in the Pacific was more direct and to the point:

JNKB JNKB DE FHWN FHWN
SHUT UP SP (at 30 wpm)

Now, the last 15 seconds of a SP was set aside for safety and urgent preliminary transmissions:

4B. Broadcasts

From the lowest to the highest priority, the following types of broadcasts exist:

CQ - meaning ``Hello All Ships and Stations'' sent in a 3X3 format:

CQ CQ CQ DE FUM FUM FUM WX AND TFC LIST QSW 430 AR

Here, the shore station FUM, French Navy Tahiti, makes an announcement that he'll be sending the weather and his traffic list on 430 kc. The CQ is the most common broadcast announcement; one will go out every few minutes.

TTT - this is the prosign for a safety broadcast: storm warnings, navigation hazards, or anything involving the safety of shipping:

TTT TTT TTT CQ DE ZLW ZLW ZLW CYCLONE WARNING NR 38 QSW 475 UP

Each T is longer than usually sent to provide a very distinctive sound. During the last 15 seconds of a silent period a half dozen TTT's would be going out. In particular, the shore stations running around the perimeter of Australia would sent the same TTT, one station following the previous station. Everyone in the Pacific wanted to be the first one out with their TTT announcement instead of waiting for a station 1000 miles away to finish, so many time they'd all go out at once. What a mess!

XXX - this prosign is indicative of an urgent broadcast where shipping and lives might be in danger (the CO might order the auto alarm sent prior to the preliminary announcement on 500):

XXX XXX XXX CQ DE NMO NMO NMO HURRICANE WARNING QSW 440 AR

Again, each X is drawn out so as to provide a very distinctive sound. This, as with the TTT announcements, went out during the last 15 seconds of a silent period. Those sending a TTT were supposed to give way to an XXX (remember, everyone is working duplex or full QSK - you MUST be able to hear anyone sending under you).

SOS - the darkest hour of an ops career is when the Captain of the ship enters the radio shack, hands the op a piece of paper, and says ``Send the SOS - here's our position''. International procedures dictate *every* step the operator will take:

4C. Distress Proceedures:

1. Auto Alarm (AA): twelve 4-second dashes, each dash followed by a one-second pause, sent in A2 (modulated CW). ITU regs demand that every ship carry an AA decoding receiver; this decoder will ONLY respond to AA's sent in A2.

1A. In A2 the transmitter is modulated by a tone (two meter repeaters ID in this manner). Thus, what you would hear on your receiver, with your BFO on would be several tones, or harmonics - very musical and

an attention getter; a station sending CW in A2 sounds like someone sending code on a piano keyboard by pressing a half dozen keys at once! [One very old book in my collection describes an easy (but archaic) method of modulating a CW transmitter: a toothed wheel is rotated at several hundred RPM with a wiper, connected to the keying circuit of the xmtr, rubbing over the teeth of the wheel. Crude but effective.]

The AA will activate the decoder onboard every ship within receiving distance after four correctly sent dashes are received; the decoders are designed to be a bit forgiving concerning the timing of the AA dash: they will accept, as a valid dash, a dash of between 3.5s and 6s in length (just in case the sending op is nervous!). As mentioned, only four correct dashes are needed, but just to be sure, ITU demands that twelve be sent. Once the AA decoder receives four dashes its latching relay closes activating lights and bells in the radio room, the radio officer's stateroom, and up on the bridge.

2. The op in distress now must wait two minutes (if possible - if his feet are getting wet then he skips this step) for off duty ops, on board other ships that have received his AA, to get to their radio rooms. 500 kc is now in a continuous silent period until the controlling station sends:

CQ CQ CQ DE (cs of controlling stn) QUM 500 KC VA

Note that QUM = Distress traffic has ended - resume normal traffic. The controlling station is the distressed vessel - he can and does give control to the first responding shore station; thus if I was the first shore stn to respond then NMO would be the controlling stn.

Whoa to ANY ship or shore station who xmts normal tfc during a distress:

9JBV 9JBV DE HCKO HCKO HW OM K
QRT QRT QRT SOS 500 (sent by dozens of stations)

3. The distress broadcast.

All traffic pertaining to the distress will be sent on 500. Those not in a position to assist will move to 512 kc - 512 is the alternate calling freq when 500 is in distress use.
Here is a typical distress bcst (sent at no more than 16 wpm (ITU regs!)):

SOS SOS SOS CQ DE 5TER 5TER 5TER BT SOS 281751Z MV PANAMA TRADER TAKING ON WATER ENGINE ROOM FLOODED POSN 13.73N 152.55W 13.73N 152.55W NEED IMMEDIATE ASSISTANCE AR MASTER SOS

This broadcast would be followed by a 10 second long dash to aid receiving stations in getting a bearing to 5TER's position.

Then would come the acknowledgements:

SOS 5TER 5TER DE NMO NMO NMO R R R SOS

SOS 5TER DE KFS KFS KFS R R R SOS

SOS 5TER 5TER 5TER DE JNA JNA JNA R R R SOS

SOS 5TER 5TER 5TER DE WNPH WNPH WNPH R R R SOS WE ARE IN POSN 11.81N 151.32W
CHANGING CSE TO UR POSN WILL GET ETA K

SOS WNPH DE 5TER R TU HERE IS MORE INFO .....

The first thing you'll notice is that ALL transmissions MUST start with
SOS (ITU regs!). What happened here is that three shore stns QSL'd the
distress bcst - ITU regs state that you must send R R R SOS; a nearby
ship also QSL'd and is proceeding to 5TER's posn. The 500 op at NMO
(me!) would be on the phone to RCC (Rescue Coordination Center) passing
all info - RCC would launch aircraft and also key up the AMVER computer
to check for nearby vessels. Suppose the AMVER computer shows that
KPLH is steaming nearby:

SOS KPLH KPLH KPLH DE NMO NMO NMO

would be sent every 5 mintes both on 500kc and on all the HF freqs.

In case no ship responded to 5TER's distress call, 5TER might give
control to NMO. We would then periodically send:

<Auto Alarm>

DDD SOS SOS SOS DDD CQ DE NMO NMO NMO BT <repeat 5TER's distress msg>

where the DDD indicates that NMO is relaying a distress.

Part 4 to be continued.

lpingel@shore.net (Lee D. Pingel) writes:

>I've just received a request from a student who has family in Bihac.
>Is there any relay net setup for Bosnia in general, Bihac in particular?
>There are those here who would like to make contact with relatives.

>I called ARRL and it appears there may not be a 3rd party agreement.

It is somewhat disheartening to hear the ARRL answer such a plea for help this way. Early this year -- I believe in January -- QST reported that a 3rd-party agreement was signed between the U.S. and Bosnian governments to permit such traffic.

>However, other countries might be able to communicate. As was pointed
>out to me, Bihac may be too hot for messages to be passed on. Other
>areas may be closer to a normal routine.

Hams throughout Bosnia are having huge difficulties remaining on the air. After 2.5 years of siege, equipment is breaking down with little possibility for hams in Sarajevo, Tuzla, Bihac, and elsewhere to repair their gear because spare parts are close to impossible to find. In addition, most of Sarajevo does not have electricity; I doubt anyplace in Bihac does. Finally, to put up antennas big enough to maintain reliable contact with the States -- particularly in this stage of the sunspot cycle when it's tougher to make trans-Atlantic contacts -- is to invite Serb nationalists besieging Bosnian cities to attack your building with artillery, tankfire, or missiles.

I have not seen many Bosnian hams spotted on phone lately, although I do see some active on Morse code (a note to all those folks who think that code is outmoded and no longer necessary -- there are still emergency situations where code is vital to get out, with limited power and antenna possibilities). I do not know of any regular traffic passing between the U.S. and Bosnia.

There might still be such nets in Europe, though.

I just purchased the above car, and noted in the owner's manual that "use of non-fcc approved radio transmitting equipemnt may interfere with the operation of the cruise control". This kind of sent up a red flag to me, after hearing about the problems with the (camry?) blowing it's engine computerwith ham gear. All of my stuff is commercial, unmodified, and legal (Alinco DJ-580, and a 2W in 30W out linear for 2M only), and of course FCC approved :). Has anyone had any good or bad experiences with this car? I really do not want to have to buy a new engine computer module!

Thanks!

3658. question about USB and LSB reception

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-05 19:53:18 UTC
From: dale@sequent.com
Message-ID: <1994Dec5.195318.24668@sequent.com>
Source record: 255649

I have a question about reception of USB and LSB on a Kenwood TS850S.

This weekend I was listening to a strong station (10 over 9 or so)
and tuned up to give him a call. To do this I moved off frequency,
switched to dummy load, tuned amp, switched back to antenna, tuned
again slightly, and moved back to frequency. To do the transmission
for tuning I hit the "tune" button and then used mic to key the rig.
When I went back to frequency I used the "A/B" to get back to where
the station was and then hit the "USB/LSB" to get off of the "tune"
setting. (This makes sense to owners of the Kenwood TS-850.)

Turns out that you really need to hit the "USB/LSB" selector twice
when you move away from the "tune" setting otherwise the radio switches
modes -- I had been on 20 meters USB, and on return from "tune" I hit
the "USB/LSB" once and was now LSB.

I listened to the station and people he was working and didn't notice
a problem, even though I was now switched to LSB. He was a strong station
and that might be the reason. When I called him in a bit he recognized
that someone was there, but could not make out any information. When I
switched back to USB he heard me just fine.

I mentioned this to a friend that stopped by later and he said that the
station I was receiving should have been many db down if I was on the
wrong sideband. We played around a bit and went to 40 meters listening
to a few SSB contacts. We switched between LSB and USB and found that
while reception was better when we had this set to LSB (40 meters), the
conversations were not too bad on the "wrong" sideband. Remember that
we may tune some for best reception while set on the "wrong" sideband.

So my question is, why do we hear the stations so well when set to
the incorrect sideband? Is this expected?

73, Dale.

From: djenkins@jetson.uh.edu
Message-ID: <3bvr9f$9rk@masala.cc.uh.edu>
Source record: 255650

Since I successfully upgraded to General on Saturday (yay!) I decided
I'd investigate what I would have to do to rig up for phone. I discovered
yesterday that my key has been plugged into the mic jack of my TenTec
Argonaut since day 1. I have been talking all over the place, and
nobody griped about tone or whatever.

Whenever I keyed, I got a sidetone out. I guess I should have
noticed that the volume control would change the
sidetone volume, and the book says that when the key is plugged
into the key jack, the sidetone volume will be constant. The book
is right--when I plugged the key into the proper jack, the volume
control became inoperative.

How/why did this work? Was I transmitting a modulated signal of
some sort? (The switch on the transmitter was in CW position.)
It seems to me that there must have been some sort of basic conflict
in the rig between the position of the mode switch (CW) and the
circuitry receiving the input (microphone input).

Just curious.

No the fan can't do anything about the temperature jumps which happen at
the chip level. It just (try's to) keep the long-term temperature from going
skyhigh.

3661. Need Ceramic insulator for tuner

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-05 19:58:25 UTC
From: ham@wam.umd.edu
Message-ID: <3bvrd1$kdl@cville-srv.wam.umd.edu>
Source record: 255651
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I just got a Heath SA-2060A 3 KW antenna tuner from a fellow netter. Unbeknownst to him (and to me, for a few days), a single "pass through," two-piece ceramic insulator going between the metering unit and the tuner itself, was apparently overtightened at some point.

I heard a slight rattling sound when I picked up the tuner (uh oh). Upon loosening the screw holding the one of the big busses to the insulator, the compressive force was gone, and the insulator collapsed into about 15 pieces (only ONE piece of it, though - the other is fine).

HELP! Somebody recommended H.H. Smith as a manufacturer of ceramic insulators, but, heck, I don't know ANYTHING about these things.

Can anybody recommend a place to find one of these? It's an "L-2" or something, according to Heath. Yes, I HAVE called Heath, and neither they nor RTO Electronics (he repairs Heath stuff) has one around.

I need ONE! Not 10, or a hundred, or even TWO! Just ONE! Any sub-stitutions? HELP!

Hello all!

A few weeks ago I posted a message asking if anybody in the
Rochester NY, area knew where irragation pipe could be found.
Well I didn't get any replies, but i kept investigating.
Saturday I found a supplier and the name, address,and phone is:

Cummings and Bicker
110-120 Lehigh Ave
Batavia, NY
716 343 5411

The 2" aluminum irragation pipe is $1.08 per foot.

Hopefully in the next week I'll be getting some.

I don't have the step-by-step instructions available, but years ago we converted a number of VHF Micor RXs to 220. All you need to do is open up the helical resonator and remove 1/3 of the winding from each coil. Then, do some tweaks to the LO and injection chain (if you use low-side injection, it won't take too much) and you're finished. We got sensitivity about equal to that at VHF, and very good front-end performance. (Of course, if you want to use the optional preamp, you have a bit more work to do.

The transmit can also be done, so I'm told, but in our group we never got further than getting the exciter to work. On at least one repeater, we used a modified exciter and exciter scrubber to drive a Midland 13-509 final, and that worked pretty well (and was much cleaner than the Midland exciter).

>interested in forming a national organization.

>The first meeting will be planned for the Dayton Hamvention in April,
>1995.

>The name of the organization will be C.O.P.S. (CW Operators Preservation
>Society)

Is this just another "Me to" group? What does it offer that isn't already offered by a group already in existence (except possibly a certain amount of "exclusivity" because of the "15 WPM minimum" requirement). See the note below which was in the last ARRL DX Bulletin:

TOPS is an international club founded in Great Britain for CW enthusiasts. The TOPS Activity Contest on 3.5 MHz CW is from 1800z December 3 to 1800z December 4. Limit operating to the 3510 to 3560 kHz segment. Listen for stations calling CQ TAC or CQ QMF. Exchange signal report and serial number. TOPS members will also give their membership numbers. Logs go to OE1TKW and are due January 31, 1995. For more information on TOPS contact G3AWR.

(end of bulletin note)

Note the word "international" in the description, which means that hams from any country can join. Perhaps someone can post the criteria for membership.

Actually, it's nice to have someone on here who knows the rules
forward and backward. Now Fred needs to provide the definition
of `broadcasting', and explain why the guy up on 3975 kHz with
his nightly non-broadcast broadcast from Maine is not really
a broadcast, even though it sure sounds like a broadcast.
(Gee, I hope that was clear...) This Maine ham even repeats
his 45 minute non-broadcast broadcast every two hours just in
case you missed it the previous times.

3671. SF Bay Area R/C flyers on 6m?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-05 23:44:19 UTC
From: sbixby@crl.com
Message-ID: <3c08kj$gr4@crl2.crl.com>
Source record: 255660

Are there some San Francisco Bay Area radio control model aircraft pilots out there using the 6m band?

I recently acquired a new radio from a person who was getting out of the hobby, on R/C channel 04 (50.880mhz). I do not have a licence yet, and I'm trying to decide if I want to trade the RF deck and Receiver to someone for a standard 72mhz pair, or go ahead and get the licence. (Being hard of hearing, I have little use for the licence except for R/C.)

If you fly 50 and/or 53mhz systems, can you tell me what the conditions are like in the bay area? Especially out toward Half Moon Bay, as that's where I normally fly.

TIA...

3675. Origin of Circuit?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-06 03:28:26 UTC
From: vacuum@the-wire.com
Message-ID: <3c0loq$7op@psyche.the-wire.com>
Source record: 255663

I'm trying to identify the origin of a particular circuit. In my copy of RCA Transmitting Tubes (TT-5) published in 1962 is an unusual configuration for a Class B modulator, page 300 figure 5-11. For those people who don't have this book (the majority) I'll describe it.

Draw a conventional Push-Pull output stage using Beam-Tetrodes, with the input and phase inverting by an interstage transformer with center-tap. OK now make these changes to it; cathodes are connected to ground (no self-bias); the center-tap of interstage transformer is connected to ground (no bias supply); put a 20k ohm resistor in between the control grid (g1) of each tube and it's respective secondary connection of the interstage transformer; next connect the screen grid (g2) of each tube directly to the same leg of the interstage transformer as it's associated control grid and ahead of the 20k ohm resistor. Plate or Anode connections are as per normal usage and the B+ is connected to the center-tap of the output transformer as per normal. B+ supply is 750 volts and maximum current is 250 ma.

The caption for this circuit reads "CLASS B MODULATOR WITH TYPE 807 IN SPECIAL TRIODE CONNECTION. Power Output 120 Watts (Approx.)".

What I'm trying to find out is where this circuit came from and when it was actually developed. A certain British high-end audio manufacturer is purporting to have invented a single-end Class A audio amplifier that is almost identical to this circuit in function. Screen grid driven by a cathode-follower and control grid connected to cathode and is calling it Enhanced Triode Mode after the MOS-FET operating state. See HI-FI News & Record Review, November 1994

Any information or further directions would be greatly appreciated.

President's Address

This is Michael Corbin VK2PFQ.

Well what a week...cheques at last, I hope...Trash and Treasure success.... threatening letters from a solicitor, amongst other things.....

Listeners will be pleased to know that the process of cheque signing has commenced. As Council was unwilling to wait to see whether our friends with the signatures turned up at next Friday's council meeting, Peter Kloppenberg VK2CPK our hard working office Administrative secretary and myself decided to find out which cheque book was which; having achieved this we filled in the relevant details and send it on to the first signatory who, in turn will send it onto the next who, hopefully, will send it on to Lewarne and Goldsmith. It left for signatory person number one in Wednesday afternoon's mail. I know he will send it on to the second bloke.... but will the second send it on to the Solicitor??? We will keep our fingers crossed.

The Trash and Treasure sale last weekend was a resounding success. The dollars and cents collected were the biggest for quite some time. The test gear that was bequeathed to us sold exceptionally well. Since Sunday Peter K and I have collected another truck load. So, if you missed out last time..Don't miss out next time.

I have never been to one of these Trash & Treasure before and although my visit was only to drop in that Deceased Estate gear, I spoke of last weekend, something was immediately obvious....

It was a stinking hot day, but where were the drinks??!! So... from now on at Trash & Treasure you will be able to purchase an Icy Cold drink and.....for those who are peckish, a Hot Dog. I'm sure we are going to make millions out of it....

Now, does anyone have an old beer 'fridge they don't want. If so, call the office. Hot Dogs, well I'll take care of that, I'm the expert at the local Baseball Park every Saturday. I'll borrow their equipment for the day. Obviously, our aim is to make the sale more attractive for Buyers and Sellers .....Three course sit down meals will take just a little longer to provide. But we are working on it!!

Now as to the threatening letter from a solicitor....Well I am unable to broadcast the exact details on this matter via this medium. You'll have to come to the next Council meeting....Hmmmm!!!!!!! The things people do to you.

On the subject of that new amateur organisation. Our inquiries statewide can find nobody except the Propaganda Minister and some bloke from the North Coast, who know anything about it...If indeed you can believe what they are saying?? Not that I am suggesting that they are telling un-truths. One thing that does come out though however is ....The identity of the person who is advising this organisation, if indeed there is an organisation. How can you wear two hats or is it three??? I wonder if it will become an affiliated club.

Christmas Parties:- Yes, it's that time of year again, so why don't I remind you of them. There's one tonight at Joe's place VK2KAA. But if you haven't booked you've missed out on that one.

There's one next Friday night after the Council meeting. It's success depends on you. We will provide the venue, you can provide the wherewithal and the good cheer. The meeting won't go past 9.30 P.M. What isn't done by then will have to wait 'till after Christmas. So, bring yourself, your refreshments and perhaps something to nibble on....or if you forget then we can send out for some KFC....Which of course stands for Known Friend of Corbin's...not the other Bloke.

The next one is the Broadcast Team Party, which will be held after the last broadcast for the year....that's December the 18th. But more on that next week, from the Broadcast Team Organiser Steve Pullan, VK2QZ.

I was disturbed to hear this week, that Jim Walker VK2XJW had been admitted to Westmead Hospital with chest pains. I'm sure you will join with me in wishing him a speedy recovery. We hope he will be home for Christmas. As I said Jim is in Westmead Hospital... But not too many visitors just yet....If you want to visit Jim, it might be wise to call first.

Those who made an offer on the Deceased Estate equipment offered for sale in November A.R. will be advised as to the result of their tenders later this week. However will the bloke who made the offer last weekend please submit it in writing by Monday, or give me another call... so as this can be finalised. The balance of the estate is advertised in this months Amateur Radio Magazine. For information on any piece of the equipment, please call the Divisional Office or myself.

Finally, we have office space to rent...Unfortunately for us but fortunately for them The Appliance and Limb Centre, our downstairs tenants ever since we moved into our Parramatta premises, have outgrown themselves. Since they first moved there that have expanded

by about half. We accommodated this expansion by putting them into what should be our lockup garage. As Parramatta City Council will not allow the Limb Centre to expand anymore. The only option open to them was, unfortunately for us, to move to a larger building. I don't need to tell you what sort of a hole that will make in our Income. My detractors will be overjoyed....I can almost hear the clackity clackity of their poison word processors from here....Never Mind..... Life wasn't meant to be easy.

See you next week.

New WIA members

The WIA bids a warm welcome to the following new members who were entered into the WIA Membership Register during the month of October 1994.

VK2CAP Mr H Prehn
VK2IBF Mr H Kenzian
VK2MOM Mr B Shipton
VK2MON Mr A Turvey
VK2QC Mr K Sharpe
VK2TDT Mr D J Taylor
VK2TFT Mr E M Stringer

The President and the Council of the NSW Division add their welcome to that of the Federal body ... WELCOME!!!

New Federal Secretary

Mr Lewis Badge has been appointed the new WIA Federal Secretary. His appointment was made by the WIA Federal Executive at the quarterly extraordinary convention over the weekend of 29-30th October. He took up his appointment in early November. Mr Badge is an accountant by profession and has a commercial background as a company secretary.

Donna Reilly, who served as Federal Secretary following Bruce Thorne's resignation in August, has returned to her previous role as Office Manager.

Boost to SMA Liaison

Liaison with the SMA at Federal level will encompass a more cohesive team approach following a decision of the WIA Federal Council at its October quarterly meeting.

The principal SMA Liaison team now consists of Federal SMA Liaison Officer, Gavan Berger VK1EB (appointed at the Federal AGM in May), Federal President Neil Penfold VK6NE, and Federal Vice Chairman Roger Harrison VK2ZRH. For particular meetings where specific know-

edge or expertise is required in given areas of the hobby, other people will be called on to participate in meetings with the SMA.

While SMA liaison has, in the past, been conducted with several WIA people occasionally present at various meetings, this new approach is expected to improve communication between the SMA and the WIA and keep the Federal Council more closely associated with activities and negotiations. Federal President Neil Penfold was to seek a team meeting with the SMA Spectrum Manager, Christine Goode, and other senior SMA staffers at the earliest available opportunity with a view to outlining general agendas, issues and approaches for future meetings. It was hoped that this could be done in early December.

WIA Federal Budget

The October quarterly convention of the WIA Federal Council, held in Melbourne over 29-30th of the month, considered the 1995 budget in some depth.

Forecasting a further small decline in income from membership subscriptions, together with a fall in costs in some areas, the Council looked at the Federal Office operations and decided on a conservative approach, budgeting for economies in several critical areas. Overall expenditure was set at a level below the past years' figures.

However, an increase in SMA Liaison costs was budgeted to cover travel expenses expected following a separate Council decision to boost representation over the coming year. Costs for production of Amateur Radio magazine were maintained at forecast levels.

In an effort to economise on Federal Office computer system costs and to further streamline office operations, the computer system software and hardware is to be upgraded, commencing in January. Bill Wardrop VK5AWM, VK5 Federal Councillor, volunteered his services to assist in this process and is to spend some time in the Federal Office during January.

80 metre DX window

The SMA has confirmed that amateur stations operating in the 80 metre DX window must comply with the regulations as explained in recent issues of "Amateur Radio". A letter received from the SMA states:

"The 80 metre DX window (3794-3800 kHz) is set aside for use by the Amateur service in Australiaon a secondary (non-interference) basis and is specified in Australian footnote AUS8 of the Australian Spectrum Plan (Statutory Rules 1990 No. 413). This band is available for use by unrestricted amateur licensees only and is conditional upon the avoidance of operation within 1 kHz of 3794 kHz, which in effect reduces the band to 3795-3800 kHz. Amateur licensees must ensure that their transmissions are wholly contained within the

band.

"When using lower sideband emission for voice transmission, as is customary for amateur operation on 80 metres, care must be taken to ensure that the transmitted sidebands do not extend below 3795 kHz. Consequently, depending on the transmitted audio bandwidth, the operating (carrier) frequency may be limited tp approximtely 3798-3800 kHz. Ohter modes of transmission which occupy less spectrum (such as CW) permit closer operation to the 3795 kHz lower limit.

"Within Australia, the spectrum immediately below the 80 metre DX window is occupied by a number of primary services. It is important that these services do not receive interference from out-of-band amateur transmissions.

"I trust this information settles any disputes regarding the use of this band."

The letter was signed by Mr. Peter Allen, Acting Manager, Technical Services Team, Customer Services Group of the SMA.

To sum up briefly:
1. No part of an amateur signal should extend below 3795 kHz.
2. When using LSB, the lowest legal carrier frequency is approximatwely 3798 kHz.
3. Interference to services operating below the DX window must be avoided.

John Martin VK3KWA Chairman, FTAC

New National Parks

Last Thursday, 1st December 1994, the New South Wales government proclaimed ten new National Parks. They are:

Gardens of Stone National Park near Lithgow
Cudmirrah National Park near Sussex Inlet
Conjola National park near Lake Conjola
Popran National Park near Gosford

and six (or is it seven) in the south east forest near Eden

Coolangubra National Park,
Yowaka National Park,
Tantawangalo National Park,
Genoa Nationa Park,
Bemboka National Park,
Biamanga National Park,
Bondi Gulf National Park.

Now what has this to do with Amateur radio? Well in 1988, the New South Wales division of the Wireless Institute of Australia introduced a number of awards, among these awards was the National Parks award, which was for amateurs (and short wave listeners) who

made 25 (or heard) contacts from or to National Parks, State Recreation Areas and Historic Sites. These new parks bring to a total of 125 National Parks, State Recreation Areas and Historic Sites that can be activated.

For more details of the National Parks award, or the other awards;

The Shires award,
The Clubs award,
The 25 award,
or The Special award;

then phone, write or call into the Divisional office for an awards booklet and I'll see you in a National Park soon.

Peter O'Connell VK2EMU
Divisional Awards Manager

WICEN News

There is little to report for now, so we will lead with some items of interest to WICEN members.

First off, it seems that the Parliamentary Committee currently investigating the January bushfires has found there was a serious lack of communications between the various agencies. Speaking of communications, we are fortunate that the Dural Engineer, who is responsible for maintaining the Divisional repeaters, is also an active WICEN member; he will personally ensure that the repeaters remain on air to provide auxiliary communications during what promises to be a worse bush-fire season than last year.

Meanwhile, further to the north, we are informed of the scale of disasters suffered by Indonesia. According to the Sydney Morning Herald, Indonesia, home of many of the world's active volcanoes and host to some of its worst earthquakes, bushfires and tidal waves, averaged at least four natural disasters a day. Poor communications and inadequate data hindered cataloguing the numbers of those affected by such disasters -- 772 killed, 2.2 million hurt and 15,000 buildings destroyed this year. We in Australia can count ourselves fortunate, although it is worth reminding listeners that this month is the 20th anniversary of Cyclone Tracy, which flattened Darwin on Christmas Day 1974, and the 5th anniversary of the Newcastle Earthquake, which did its best to level Newcastle on 28th December 1989. WICEN members were heavily involved in the aftermath of both disasters.

Turning closer to home, we advise of a meeting of the Blue Mountains region tomorrow, starting at 8pm. The location is the Glenbrook Bush Fire Brigade Station, and there will be a talk-in on 147.175 MHz simplex for peoplc needing directions. All interested persons

are invited to attend, and for more information please contact Alan VK2YYJ on (02) 839-1388 during office hours. The other events are the Management Committee meeting next Saturday (which we understand may be followed by a "barbie"); the NSW Water Ski Association "Lion Island Classic" next Sunday, for which David VK2KLX is the contact; and the Hunter region meeting at the Emergency Operations Centre, corner of Elizabeth and Hannel Sts, Carrington, commencing at 7pm, at which Pauline VK2GTB will make you welcome.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to either VK2AAB or VK2OP.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Dural Report

This report was submitted by Tony Liolio VK2ZLT

Last weekend whilst some of you were spending myour money at the trash & treasure sale at Parramatta Head Office, I was slaving away in the attic (?) at Dural. Tim Mills (VK2ZTM) and yours truly (VK2ZLT) have now, some of you will say at last, installed emergency lighting at Dural. This was spurred on by those three power balckouts we have had over the last couple of months. Although the 7 trailer lights only have 12 volt 5 watt globes in them at present they will soon be replaced with 22 watt ones. The main thing is that there are emergency lights of some description installed and working. I would like to thank Tim Mills for helping me in the sweltering heat , when he could have been home in the air conditioned comfort of his home.

Dave Horsfall (VK2KFU) has been putting together some recommendat-ions for the upgrade of the station. There is now once again a Dural committee. The Dural facility was put together in the early 1950's by Michael Corbin VK2PFQ's father Jim VK2YC together with many willing workers, not forgetting those donations from you blokes in the country. The Dural committee's aim is to modernise the Dural site and make the station better and that little bit more reliable for you the listener. Some of our ideas are:

* more beacons and repeaters
* a much needed coat of paint
* conversion of as many transmitters as possible to 12 volt operation. This will mean blackouts won't put us off the air.
* an upgraded battery back-up system.

Finally a word on the six metre repeater. I have discovered a blown final transistor in the P.A. stage which, when it is replaced, will get things going again. My biggest problem is time ... something of

which I never seem to have enough. I would like to thank all those who have helped with this project. We hope to have it back on the air sometime after Christmas.

Magazine Roundup

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the December issues of the various magazines.

"Electronics Australia" decribes "Asynchronous Transfer Mode" (or ATM), which will form the basis for networking in the future; discusses toxic computer scrap, soldering safety, and RFI from touch lamps; concludes the construction of their intelligent solar battery charger; shows how to adapt the "Pocket Packet" kit for a Macintosh; introduces Erasable Programmable Logic Devices (or EPLDs) with a simple pulse-generator kit; and finishes with a series on modems and data communications.

"Silicon Chip" decribes how buyers of 9-bit SIMMs are being conned by fake memory modules (the parity bit is replaced with a much cheaper parity generator chip); Australian ingenuity is demonstrated once again by a "world first" -- a Dolby Pro Logic Surround Sound Decoder kit; Amateurs can torment their kids at Christmas by building an electronic cricket and hiding it; a simple but effective car burglar alarm using a dedicated chip is described; a "Basic Stamp" micro-controller is discussed ; a three-spot low distortion sinewave oscillator is constructed; and in another example of Australian ingenuity, a complex radio control system for models is introduced.

"Amateur Radio" describes a simple and transportable tilt-over tower; an alternator is modified to produce a battery charger;adds a PLL carrier-detect circuit to the venerable "7910" packet modem; everything the packet beginner wanted to know about the various acronyms is explained; a noise bridge is modified for better performance; basic packet radio operation is explained; Morse code users will find an explanation of the Curtis keyer chip; and power supplies for repeaters are discussed.

Finally, "Amateur Radio Action" describes the SMA's policy on interference (sub-titled "Read it and Weep"); how to get started cheaply in Amateur radio is discussed; a review of an antenna tuner would not have been mentioned, except it was used to tune up a lettuce successfully on 40m; the NOAA-11 weather satellite is discussed, as it appears to have failed in a peculiar manner; and high-speed packet radio is introduced, with particular attention paid to bandwidth.

Be listening next month for another summary of the local magazines.

--Dave VK2KFU

News briefs

With frequent thunder storms occurring at this time of the year, it's worth reminding listeners of the dangers. Most of us probably know not to go out playing golf or climbing our towers during thundery weather, but there are other precautions we can take to avoid injury.

For example, you should avoid using the telephone during thunderstorms. A Sydney woman ended up in hospital last Sunday when she suffered an electric shock while talking on the telephone during a thunderstorm. Don't forget that your computer and telephone modem can also suffer a similar fate.

And, of course, earth or unplug those antennas, and disconnect your radio and computer gear from the mains to be on the safe side.

***

At the Solar '94 Conference in Sydney this week, Professor David Suzuki urged the Government to support solar energy and to adopt a long-term renewable energy strategy. The conference, hosted at the University of New South Wales by the Australia New Zealand Solar Energy Society, also saw the launch of a book by ABC science reporter Gavin Gilchrist. Entitled The Big Switch, the book argues that Australia's coal reserves will start to run out as early as the year 2007.

Professor Suzuki said that solar energy technology by itself would not be enough to protect the environment, but that it would be a step on the way to "lightening the human ecological footprint on the Earth".

Dr. David Mills, a physicist at the University of Sydney, lamented that the government was allocating less money to solar energy research than it was willing to spend tearing down old eyesores at Sydney's Circular Quay. He called for "broad-based simulation of a range of technologies, including bio fuels for vehicles, wind power, and solar thermal energy".

A report from the Institute of Engineers Australia said that Australia was not on track for meeting its greenhouse gas emission targets for the year, and that in fact emissions were still on the increase. These targets were set under the 1992 United Nations Global Convention on Climate Change, to which Australia is a signatory.

***

A common complaint from users of battery-powered laptop computers (well in fact anyone who uses batteries) is that the batteries never seem to last long enough. While the elctronic circuits themselves are becoming more efficient, manufacturers are packing in more

circuits and features into their products, so that the power problem still remains.

A.E.R. Energy thinks it has the answer, with a new zinc-air design it calls the Energy Power 220, a 1.3 kg battery with a capacity of 140 Watt-hours (by comparision, a Nickel Metal Hydride battery of similar weight has a capacity of only 50 Watt-hours). A.E.R. says its battery has a longer operating life and is environmentally friendly, as it uses air as the catalyst. On the downside, the air catalyst means the battery is significantly larger, and can only be recharged about 50 times.

Offering better performance is a new lithium ion battery, which could be recycled between 500 and 1000 times. However, cost and availablilty are still a problem, and there is some concern over the safety of the unit.

Other possible contenders in the "best battery" stakes are lithium polymer batteries being developed by companies like Dell Computers, Toshiba, and Texas Instruments.

Meanwhile a Valence lithium battery could be available late next year: this battery will have a lifetime three to four times that of Nicads, and will be rechargeable over several hundred cycles. Initially a 110 Watt-hour battery will be available, with a 150 Watt-hour model coming into production later.

***

Finally, environmentally-aware Amateurs might like to get hold of a free booklet published by the Environmental Protection Agency. Entitled "Everyday things we can do to improve our environment", the booklet may be obtained simply by phoning 1800 632-907.

***

"News briefs" looks at communications news items that appear in the mainstream media. Thanks this week go to "The Australian" and "The Sydney Morning Herald". If your local or regional paper runs an item of interest to Radio Amateurs, why not send a clipping to the Divisional office?

--Richard Murnane VK2SKY

A free invitation

to visit the telecommunications repository and see 100 years of telephony including:
old phones
photographs
switchboards
Morse equipment and demonstrations of morse equipment restored to working order
telegraph and telex equipment

Films on various telecommunications subjects shown in the theatrette.

Convenient location: The old Ashfield Post Office
11 Hercules Street
Ashfield NSW

100 metres from Ashfield Railway Station and undercover public car park.

Open every Wednesday from 12.30pm to 2.30pm (closed public holidays).

Just call in - you will be glad you did!

Their phone number is 716-8071.

Going to the Cook Islands?

With the approach of the Christmas holidays some lucky amateurs may be doing just that. If this description fits you, why don't you get your own "ZK" callsign?

How? Write to:
Cook Island Amateur Radio Club ZK1CI
P.O. Box 663
Raratonga
Cook Island
South Pacific

Club meetings are held at Tangaroa Liqueur Bar Ara Metua (Inland Road) Tutakimoa (next to "The Perfume Factory") Raratonga, Cook Island.

When: Meetings held first Thursday of every month at 8.30pm.

General information: The club is a great place for visitors to meet LOCAL AMATEURS and RADIO ENTHUSIASTS. A warm welcome is guaranteed. No joining fee. Enjoy a swim amongst lush tropical garden setting in full size pool. Club can arrange meetings and skeds with Outer Island Amateurs and discounted travel to the outer islands. Full Amateur Shack at Club House with excellent Antennas available. Club can organize local ZK RADIO LICENCE whilst visiting.

ORIGINAL: (SMA) AMATEUR OPERATOR'S CERTIFICATE of PROFICIENCY must be produced - A copy not acceptable, to obtain your ZK LICENCE to operate in the Cook Islands.

Further information from John Abbott ZK1AX (Club Secretary)
Telephone 0011-682-21190
Fax 0015-682-20964

IPS WEEKLY REPORT
---

25 NOVEMBER - 01 DECEMBER

DATE OF ISSUE: 02 DECEMBER 1994

INDICES:
DATE 25 26 27 28 29 30 01
10CM 82 83 80 80 80 78 79

CLUB NEWS

A.A.T.C.

Stop press - Attention all AATC mwembers - changes to the next meeting location - it will be on December 11th at Dave Pack's home 10 Manus Place 1.00 pm Glenfield owing to an oversight by the WIA - Parramatta.

The technical lecture on the day will be on (a) oscilloscopes - the use and abuse. A demonstration of an 8 channel relay controlled output from your IBM computer so you can operate external devices via the keyboard, and the backup lecture (b) will be on charging lead acid batteries.

Calling all AATC members - start thinking about what input you can do for the Wyong field day next year - remember Feb 26 is only 12 weeks away. Sort out what equipment you wish to have displayed. Also

the timings you will be present to man or woman the site etc.

For more information about the A.A.T.C. listen to the net on Tuesday nights from the Liverpool area on 146.625 MHz - approx 19.30 hrs - or watch us on 1250 MHz from our Oaldale repeater any-time. Also you can ring for more info to Sydney 02 587-3491 any time !!!

AATC Inc. Publicity Officer Bob Barnes

Parramatta Amateur Radio Club

The planned picnic day this Sunday has been cancelled. In lieu of this the club's Christmas function will be held on the third Thursday of this month, that being the 15th of December, it will be held at the Lancers Barracks Bistro, the Commercial Inn located at the corner of Wigram Street and Station Street Parramatta, commenc-ing at 7.30pm.
You can see us there after 7.30pm or meet at Amateur Radio House Wigram Street just prior to 7.30 and then walk up.

The club's repeater VK2RPC located at Kurrajong has been in service since the 9th of October. This repeater has been used by many operators, the reports received have indicated excellent coverage of the Sydney and surrounding areas, it has also opened up coverage in previous known shadow areas not covered by other repeaters.

It is worth noting that this amateur service shares the site with other commercial services, including 5 pager transmitters. It just goes to show that both commercial and amateur services can co-exist, despite the potential interference problems.

Unfortunately, there are some problems. Apparently some stations accessing the Kurrajong repeater are also opening up the Tamworth repeater. This is causing problems to the Tamworth repeater as it is a solar powered service.

Subsequently, NTAC have asked the Parramatta Club to temporarily close down the Kurrajong repeater. So in good faith, we will comply with this request. The repeater will be switched off some time in the next few days.

Apologies to the current users of this service, we do promise to work with the relevant authorities and people, with the aim to return this excellent facility to full service, without causing any undue interference to other amateur service areas. If anyone can offer a potential solution to this problem, we would be keen to hear your comments.

These can be sent to PARC PO Box 2391 North Parramatta 2151 or by packet to VK2TQM @ VK2XSO.

The members of the club wish everyone a Merry Christmas and a Happy and Prosperous New Year.

submitted by David VK2TQM (Secretary)

Great Lakes

On Friday 25th November the Great Lakes Radio Club Inc. held its final meeting for 1994. During the Christmas break the repeater Committee will be pursuing finalisation of the club's four outstanding repeater applications with the hope that this may be reached in time for our first 1995 meeting on the 27th January,

An informal Christmas function has been arranged for the evening of Thursday 8th December at the Forster Bowling Club. This will also be a farewell to our UK member, Stephen Linden, who will shortly be returning home after twelve months exchange teaching. Would any member wishing to attend please advise Stan Ellis on 065-54-7996 by Tuesday 6th.

At our January meeting arrangements will be made for our annual pilgrimage to Wyong for the Central Coast Club's field day. Bus hire will depend on the number wanting this form of transport. Cost, including admission, is estimated at $25.

Warm Christmas Greetings and Sincere Wishes for a more peaceful New Year are extended to all amateurs and their families from us here at the beautiful Great Lakes

Stan Ellis VK2DDL

Coming events

Now, a summary of upcoming events of interest to members and other Radio Amateurs ...

WAHRA, AAPRA, & SPARC Christmas Party. . . . . Today

3683. Emergency frequencies

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-06 07:17:00 UTC
From: pve@dg13.cec.BE
Message-ID: <2EE4109E@smtp>
Source record: 255672

I have been following the discussions on emergency frequencies and I too agree that there must be a frequency agreed on a world wide basis for such use.
Aviation uses 121.5, military uses 243MHz why cant hams have something similar.
On VHF, you would have to :
1/ find an agreed frequency and a secondary (secondary would normally be a common repeater freq)
2/ announce it and ensure everyone agrees (dont ask, if you ask whether people like the freq chosen or not, you will have tons of frequencies suggested)
3/ announce the frequency on a worldwide basis.
4/ Implement it.

On HF, things are a little complex.
In the US you can always count on 14.300 or 13.313 to get messages passed for emergency; as a Greek I can always count on 14.285 to contact a ham in Greece 24 hours a day, and as Canadian I can always use 14.140. What about the rest? Does anyone knows what frequencies you can use to contact specific areas? Are there nets for UK hams or Irish hams or French or German hams? If anyone knows of any, we can create a list of frequencies to use to contact hams around the globe. After all, we are in the communications field and we should be able to do just that!

Definitely push the envelope. But when you're copying faster than you
comfortably can, look at the copy and see what characters are glaringly
absent; those are the ones you need to work particularly hard on. Worked
for me.

Message-ID: <9412060836.aa13661@COR5.PICA.ARMY.MIL>
Source record: 255537

Howdy!

I am looking for some information on how to determine the most
effective use of powdered-iron in toroidal inductors for use
in HF legal limit power amplifiers.

I am currently using a stack of 2 T-225A cores for inductance
on 160M and part of 80M. The inductor became very hot while
operating the 160M contest this past weekend. As the heat
rose power output fell.

My question is how does one determine the proper size of
toroid for this application. If Power ~ Core volume, then
it follows that by increasing core size will allow greater
power handling capability. None of the amateur references
I have (87 handbook) deal with the power issue and Sevick
only deals with it in general terms in his "Transmision
Line Transformer" book. What I need is hard facts
and formulas.

Also if someone knows if a stack of 2 cores could be used
in a sandwich with a piece of Aluminum sheet in between the
cores to act as a heat sink? COuld this be done in lieu
of incresing core volume as dicussed above?

If someone could point me in the right direction on these
technical issues I would be very appreciative.

3691. :INTERFERRANCE:K1MAN: Can anyone help??????

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-06 14:02:06 UTC
From: DonSimp@ix.netcom.com
Message-ID: <3c1qsv$o44@ixnews1.ix.netcom.com>
Source record: 255528

Hello out there. My name is Don Simpson and I am an amateur in the state of Georgia. My call sign is KO4TA. I generally can be found on 3.975mhz at or around 21:00 Easten. (02:00z)

My problem is this:

There is a guy up in Maine, K1MAN Glenn Baxter. This fellow has started a broadcast on top of our round table. At first we would just ignore him as trivial. There is lots of qrm on 75 meters as most of you are aware.

However as of late he has began to broadcast his "IARN Program" every other hour. The program is about 45 minutes. It consists of an info cast of sorts and has interviews and what have you.

The frequency, 3.975mhz has been in use by folks in the southeast since before time. This is the area that the FCC declared a stand down frequency during the flooding of both Ga. and Tx. recently. This is the freq. that is used every evening by the Ga. SSB network. and the ARES..

All of that is of no matter because as I understand it, no one is to engage in broadcasting. One way communication. The rule of "WHo is there first" and so forth.

Recently Mr. Baxter has written several letters to the ATORNEY GENERAL's office in Maine requesting that we be prosecuted for interferring with his broadcast. He cites this as a fellony.

So you ask, "why don't you just move off and let the guy have it?"

1. Old friends for over 5 decades have known where to find each other. Moving, transfers all other matters of relocation. But yet 3.975 stays intact.

2. What happens at the new location if Mr. Baxter decides that he needs to expand his IARN coverage? What happens when someone else decides to do something similar?

We have complained to the FCC which doesn't seem to be effective. We have written to the ARRL with no results. I have written to my congressman, Newt Gingrich. Still no results.

The only thing that will do any good is if more people get involved in the fight. Please get involved. For more info check into the 2100 gang or email me.

Thanks to all the fellow amateurs who will assist.

Sincerely,

Don Simpson KO4TA

>***

If the main use of ham radio is for social chats with a group
of like minded people on an open net, then you ** don't want
a lot of spectrum for hams **. After all, if you had infinite
spectrum the probability of hitting a group of users is nil
if they were spread across the spectrum.

The day's not far off when anyone will be able to talk with anyone else in the world, wire free, without a test or license. What are hams for then, except for group chatting in a more civil atmosphere than CB? The few of us left will only need to congregate in a small chunk of spectrum already available. Why don't we just tell the FCC to give away the rest to those that really want it?

Cheers,
Bob Kirk N3OZB

Jeff,

I have been an amateur for about 15 years now. I have always been curious about the cw stations with the 3 character id's in the upper portion of the HF bands (i.e. 8 MHZ, etc). I would be interested in knowing more about these stations and why they were created. I have ran across several stations that are the AT&T High Seas Telephone service. I would be also interested in the stations and their locations. Is there a listing that I can get somewhere?

Thanks,

73 Dan

3698. Marconi Special Event

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-06 15:57:54 UTC
From: ppiercey@random.ucs.mun.ca
Message-ID: <3c21m2$971@coranto.ucs.mun.ca>
Source record: 255540

Once again, The Society of Newfoundland Radio Amateurs (SONRA) will be operating the VO1AA station in commemoration of the Dec 12, 1901 reception of the first trans-Atlantic wireless signal by Guglielmo Marconi at Signal Hill in St. John's. The station is operating from Cabot Tower, which is approximately 100 ft from the actual site where the historic signal was received. The operation begins at 0000 UTC on Dec 12, 1994 and runs until 2400 UTC.

At various times, there will be CW operation on 14.012MHz and 10.112MHz with much of the operation being on phone on various bands.

There is the possibility of an Award being established for the Dec 12 operations. More will follow.

The members of SONRA welcome all HF DXers and Historic station buffs to join us for a QSO and contact with the site where DX started.

The QSL route for the station is:

VO1AA
c/o Roly Peddle
Box 1226
St. John's, NF
Canada
A1C 5M9

or via the bureau.

CU then.

"Desire of the majority of members" has nothing to do with a court ordered settlement. If the bottom line were that the ARRL had a choice of pursuing a course that would have resulted in their financial ruin, would it have been in the best interests of the members to do so?

This entire issue went on for too long to begin with because of the perception of the League that it should pursue it.

> The only illegal activity being conducted is sodomy.

At the ARRL? Gives a whole new meaning to the word headquarters.

You have proof of this? Pictures perhaps? Maybe it is just a frustration because of the people "ruining" the men's rooms on campus repeatedly refuse to solicite you.

> Jeff NH6IL

Obsessed with the sexual choices of others as always.

You really should have a cat scan. Your emotional disturbances are indicative of a more serious problem.

73 es GM from Jeff. (The one in the elmers list because I DO care.)

Yes, the Code is all you say, and less, but until we get the rules
changed, you've got to learn enough to pass the tests. So it's best
to attack the problem intelligently. There has been a considerable
amount learned about operant conditioning since the Korean War. You
can apply that knowledge to help you condition the wetware modem.
I posted a bit about this a few weeks ago.

>I have sat and tried to
>learn the blasted code, and I can't even discern the difference between
>a dit and a dah. I have no ear for it, so therefore I can never attain a
>higher license clsssification. Morse code has its place, and my hats off
>to those who have mastered it, but its a real bugger for me. I will
>probably never advance beyond codeless tech because of it.

The first thing you've got to do, Doc, is get rid of the negative
thoughts. You don't have to like Code, but you've got to convince
yourself that you *can* beat it. It's like cleaning a clogged drain,
nobody likes the job, but that's no reason to throw up your hands
and let the toilet back up all over the house. You've got to get
out that snake, maybe a couple of wrenches, and unblock the damn
thing. Plumbers aren't smarter than you, they're just better paid,
and have developed a tolerance for the stench. Learning Code is
no different than cleaning that drain. You've got to put aside
your revulsion and get on with the job.

You *can* hear the difference between a dit and a dah. You just
have to educate your ear to the difference. It's like trying to
understand music on a scale or tempo with which you are unfamiliar.
Japanese opera sounds like cats fighting in a sack to the untrained
Western ear, but once you listen to it for a while you begin to
detect patterns and rhythms in the caterwauling. The same is true

with Morse. Get some tapes and listen to them. Don't try to make sense of them, just listen to the patterns and rhythms. After a few days, you'll begin to automatically hear the patterns and rhythms. You'll easily tell the difference between a dit and a dah. You won't have a clue what they *mean*, but that's not important at this stage.

Rome wasn't built in a day, and you won't learn Morse in a day either. The conditioning process requires drill, drill, drill. You have to develop reflexive responses to the sound patterns so that the conscious mind is bypassed entirely. You can't develop any speed if you think, instead the body just has to *do*. That requires tedious, repetitive training. There will be days, even weeks, where you seem to make no progress at all, you may even seem to go backwards at times. This is normal, expect it, don't get frustrated and discouraged. This is part of the conditioning process. You'll find that when progress does come, it comes in spurts, seemingly out of the blue. That's normal too. It signals that a new reflexive pathway has been established.

Associate the sound patterns with certain letters a few at a time. Traditionally, ETAIONS, is the first group learned since they are the most common letters in English spelling. A program that sends these letters to you over and over, requiring a response from you, is the easiest way to drill these patterns into the neural pathways you need to develop. When you hear a certain sound pattern, your finger should automatically strike the correct key. You shouldn't try to think, you shouldn't try to do a table lookup in your conscious mind, your body should just *do*. Work with letter pairs first, then triplets, and so on. Keep your mind a blank slate, let your fingers do the work.

Whatever you do, *don't think*. Morse Code is the non-thinking man's signaling medium. If you try to think about what you're doing, it won't work. It's like juggling, if you try to consciously track the trajectory of each egg, you'll have egg salad all over the floor. The body just has to *do*. This is the hardest part of learning Morse for an intelligent person. It's hard to switch off the conscious mind while remaining alert and open to stimuli.

You have to be able to enter a Zen state where Alpha rhythms dominate brain activity. Practice clearing your mind. Eventually, you'll be able to copy flawlessly while thinking of other things, even carrying on a spirited conversation with someone in the room, but while you're learning, you want to avoid that complexity. (For some people, such distractions are a necessary crutch to keep the conscious mind from reacting to the Code. If you find you can't clear your mind, try singing nonsense songs while you copy.)

You *can* pass the tests, then you can forget Code and never touch it again as long as you live if you like. Like a bad memory of a horrible

accident, it will fade with time. It doesn't *have* to cripple your
mind for life if you don't let it.

Gary

Greetings!

I am considering purchasing the 250Hz CW filter for my FT990, but I wonder if an external DSP filter might be better for me. My problem is adjacent signals and poor band conditions. I've read that DSP filters can block out carriers and clean up noise. Would this be a better way to go than getting a narrower CW filter for my rig? If so, can you recommend any?

Thanks!

I have a 990 with the 250 Hz filter and it is WONDERFUL! Really does
a super job of zeroing right in on a CW signal. I did give serious
consideration to a DSP and while I still do think about getting one,
what bothers me is how much a ridiculous hack it is to tie the DSP
in thru the headphone jack. What a cobble! Also, I just wasn't that
pleased with the mechanical construction of, for example, the
Timewave units. As near as I can see, the DSP-59 is probably the
top unit out there but the controls are terrible: really clunky
switches.

I know, these considerations say absolutely nothing about how well
a DSP works compared to a tighter IF filter but what can I say?
This is a hobby, I'm in it for fun and whatever I like most, even
if my reasons seem totally irrational :-), is what I should get.
YMMV.

My experience with powered iron is that it has lower Q at
low power levels than the best ferrite, and it has much higher
core losses at high power levels than almost any ferrite. The
only advantages powered iron has are:

1. It costs less and may be easier to get thru "ham" sources.

2. It has a built in air gap, which is helpful if you have to
run DC thru the core.

Do yourself a favor and get some cores made with Fair-Rite #67 material.
This stuff is phenomenal. I've measured Q's as high as 600 at 10 MHz.
with it. If you want to get really low losses, talk to Ceramic Magnetics.
They are the acknowledged experts at this.

3708. Re: Narrow filters vs. DSP

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-06 20:26:37 UTC
From: ham@wam.umd.edu
Message-ID: <3c2hdt$k81@cville-srv.wam.umd.edu>
Source record: 255550

DSP is great! Unfortunately, no one in the ham field has yet to imple-
ment DSP in the IF chain (except for Watkins-Johnson, and that's a
$3,700 receiver). As a result, what we know as "DSP" is AUDIO DSP.

Comparing Audio filtering and IF filtering is an unfair fight, as IF
filtering has a chance of knocking signals out very early in the
signal path, whereas with audio filtering, the surrounding signals
have already done their damage by the time the filter gets to try to
improve the situation. If the receiver is already desensed, there's not a
whole lot the audio filter can do about it.

Analog vs. DSP: Digital wins, IF they are playing on the same field.
Analog IF filtering vs. DSP Audio? Gotta give it to Analog IF, but a
combination of the two is even better.

Source record: 255546
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Ten-Tec has a modification they do with the OMNI V to make its transmit frequency stable with variations in output power. It begins with a logic board that uses Vcc to select PIN diodes in order to select capacitors which will 'pull' the USB crystal into putting out the desired frequency (depending upon mode - different caps are switched inline).

With 5 watts out, I got Vcc = 13.6 volts. At 100 watts, I got about 13.05 volts (IR loss in the cable). This voltage switched the PIN diodes in - and as it changed, the current thru the diode changed! This led to (I'm guessing) a differing capacitance, pulling the xmit freq. some 40 Hz in CW mode!

The 81509 board sits above the logic board, found at the back left corner of the logic board, which itself is located on the top right side of the rig. It is a 5-terminal regulator, LM2931, with a few resistors and caps, designed to put out a constant 100 ma with the resistor choices made.

HOWEVER, I noted that mine wasn't regulating properly! Vo was following Vin pretty closely! TT sent me another board, and I put it in, with the SAME results! I got the app notes for the LM2931 and it turns out that with the resistors on the board, the board was regulating to 16.8 volts! Apparently, 352k was used, and 242k was desired (confirmed by Larry Boyd and Rick Long at TT). The plan was for 242k - corresponding to about 11.8 volts - but somebody apparently reached into the wrong bin when making up the boards!

CHECK YOURS! My original 81509 board was installed in August, and I got this second defective on in mid-November...

TT's number is 1-800-833-7373, or call or email me for my findings.

|> command post. We don't expect to have time for Washington to determine there has
|> been an earthquake, what the magnitude is, did the governor declare an emergency
|> . . .
|>

Just to back up what you are saying..

Subpart A General Provisions

97.1 Basis and purpose. The rules and regulations in this part
are designed to provide an amateur radio service having a fundamental
purpose as expressed in the following principles:

(a) Recognition and enhancement of the value of the amateur
service to the public as a voluntary noncommercial communication service,
particularly with respect to providing emergency communications.

(b) Continuation and extension of the amateur's proven
ability to contribute to the advancement of the radio art.

Subpart E - Providing Emergency Communications

97.401 Operation during a disaster. - (a) When normal communi-
cation systems are overloaded, damaged or disrupted because a disaster has
occurred, or is likely to occur, in an area where the amateur service is
regulated by the FCC, an amateur station may make transmissions necessary
to meet essential communication needs and facilitate relief actions.

97.403 Safety of life and protection of property. - No provision
of these rules prevents the use by an amateur station of any means of
radiocommunication at its disposal to provide essential communication
needs in connection with the immediate safety of human life and immediate
protection of property when normal communication systems are not
available.

I quoted the above stuff just to illustrate that emergency comm
is allowed/expected before or after a disaster strikes. Grady is
mistaken if thinks that we are only allowed to use amateur radio
AFTER the FCC has declared an emergency... It's right there in 97.401,
"disrupted because a disaster has occured, or is likely to occur." You
can't get a whole lot clearer than that.

Bill is also right in pointing out that you can't wait the time required
to get such a declaration, from ANY source, let alone the FCC, before you
start trying to help.

Note: This doesn't mean that amateurs should respond willy-nilly, without
some sort of official permission first. In CA we have provisions for
"Disaster Service Workers" that must be dispatched by competant authority.
This "competant authority" can be the city radio officer, or perhaps
the local batallion commander. The trick being that we need to
coordinate our efforts immediately with the government entities we
are trying to help from the get-go.

|> Grady feels that ". . . it is *very* poor public policy to *rely* upon [hams] as
|> we might rely upon a sworn, paid emergency worker." Again, I disagree, and so do
|> many in emergency management. Grady would like to think that satellite
|> communications and cell phones are the answer, but that is not reality. In urban
|> centers, cell sites get saturated instantly in an emergency. During the fires
|> last year, battalion chiefs using cell phones would keep the line open once
|> they got through, just so they would not loose the line. Satellites are just not
|> used for this type of communication, and there are limited frequencies for use
|> where they are used.

Here again, Bill is mostly correct. (He is wrong about satellite comm...I'll cover
that in a second.) Recent experience has shown that the common radio communications
media that is so pervasive in todays world gets saturated immediately or doesn't
survive the event. Take your pick. This is where the supplemental channels provided
by the amateurs comes into play.

I will point out here also that I think we are developing more into sprinters instead
of long-haul communications providers. What I mean here is that we are most useful
in the first few hours or days of an event, as oppossed to 2 to 3 weeks after the
event. As time passes after the initial cause of the emergency, the standard infrastructure
starts coming back on-line, at which point is time for the amateurs to pack up and
go home. This time seems to be getting shorter and shorter!

Now to satellites. We are seeing satellite systems showing up in all sorts of
situations, and the amateurs, are indeed, being relieved once the satellite
system is up and operational. Some examples: A recent fire in the Sierra Foothills
caused amatuers from around the state to respond under the Dept of Forrestry VIP
program. They supplied comm for a couple days back to Sacramento as an example.
Once the satellite comm unit arrived providing a T1 data link back, i.e. 24 phone
lines, they didn't need the amateurs anymore. In another recent emergeny event, the
incident commander was provided with a high-speed connection to the internet via
satellite. This allows them to have access to the National Weather Service, email
facilities to hq, electronic hookup to thier home-base computers, etc. The relm
of possibilities are endless!

|>
|> Radio amateurs have major advantages over land-mobile communication systems in
|> an emergency: we are frequency agile, thereby increasing the available bandwidth
|> considerably. In many areas, lack of radio communication resources is not so
|> much a matter of the agency being to *cheap* , as Grady implies, to pay for
|> reliable communications, but a lack of available spectrum. Of course, if more
|> spectrum allocation for local government were necessary, and if amateur radio is
|> not a good resource for emergency communication, perhaps amateur spectrum could
|> be reallocated. :-) Think about that. We can setup, operate, and maintain
|> networks with minimal equipment because we know how it works, that's our "job".

Again, good points! The one thing I would add is that we DO need to think about
the future here. If emergency comm is our best defense against loosing
spectrum, then we must realize that the ability of John Q Public to communicate
just as easily as we do has arrived. The major difference today is that these
systems saturate or die right after a disaster strikes. That won't remain
the case!

We are suppossed to be technologically estute people, technology is definately
another part of the hobby! Emergency communicators should constantly be
trying to find other applications for our spectrum. Why can't WE install the
infrastructure for T1 mobile units? Why aren't we deploying spread spectrum
hand held radios(because of FCC limiations here :-() We have the playing
field all open...why aren't we jumping into it with both feet?

I can only think of a couple of places where we have come up with new
applications in emergency comm in the last 5-10 years, and both involve
packet. The first is the ARESdata program that was originally fielded here
in Silicon Valley by WN6I and N6KL. The other is APRS which is turning into
a very versatile package for emegency comm work. There are other applications
just waiting to be developed... but you need to talk to your served agencies
to find out what they need!

|> Sworn police officers and fire personnel are radio users, if it does not work,
|> they can't tell you why, nor should they, have other jobs to do in an emergency.
|> We provide increased manpower in an emergency, government can not and should not

I went down to my local electronic junk scrap dealer and purchased 25
1 inch iron toroid cores for $10. I wrapped the incoming telephone cord
through the toroid core about 15 times. This eliminated all RFI from the
telephone. In some extream cases, I also added a .001 cap in parallel
to the line at an additional cost of .3 cents each.

Save yourself some money. Buying the K-Comms and International
Communications Engineers' filters are just making them rich.

>Same with traffic fines. Really pisses me off!

I've got to assume that comment is sarcastic (and I agree with it's spirit), BUT going back to Bart's claim, sez who that the FCC holds a licensing monopoly? They just own a territory. You can get a ham license from, for instance, I&SC (aka MOC, MOT, many others) here in Canada with any callsign suffix you like for only C$23/year. Payable in perpetuity. $150 starts to look pretty good after, what, about 8 years?

Of course, if you don't insist on a vanity call, but just accept the luck of the draw, then the fee is a mere C$23/year. A great savings.

>>> "...as we might rely upon a sworn, paid emergency worker."

I think you're coupling two separate concepts. In L.A. County,
for example, Disaster Communication Service members are sworn
and are administered by the Sheriff's department, but are not
paid. We conduct three drills a week on 2m and 220MHz voice
and packet, plus additional special exercises throughout the year,
and records are kept concerning check-ins and assistance with net
operations. Being unpaid doesn't make these workers unreliable.

ARLB095 More FCC reorganization

More FCC reorganization

The Federal Communications Commission on December 1 established a new Wireless Telecommunications Bureau, as part of its continuing reorganization begun last summer.

The new bureau will have seven divisions and will ''handle all FCC domestic wireless telecommunications programs and policies, except satellite communications,'' the FCC said. The new bureau also will ''serve as the Commission's principal policy and administrative resource (regarding) spectrum auctions.''

Ralph Haller, formerly chief of the Private Radio Bureau, was named one of two deputy bureau chiefs, reporting directly to the chief of the Wireless Telecommunications Bureau, Regina M. Keeney. Both of Keeney's parents are licensed amateurs. The new Private Radio Division, along with the Licensing Division, will handle Amateur Radio matters at the FCC.

The FCC said that the Private Radio Division would ''project demand for existing and possible new communications requirements and services.''

ARLD073 DXAC vote results

DXAC Vote Results

The ARRL DX Advisory Committee, DXAC, has voted 14 to 2 against a petition to add the Austral Islands and the Marquesas Islands to the DXCC Countries List. Those voting against shared the feeling that French Polynesia is not a Point 1 DXCC country, and for that reason these two island groups do not qualify as separate countries under the current DXCC rules.

The DXAC voted 13 to 1 against adding the Balleny Islands to the DXCC Countries List. Most of those voting against this proposal felt that the Balleny Islands are a part of Antarctica.

Finally, the DXAC voted 14 to 2 against recommending establishment of a DXCC award for contacts made while operating mobile. Many comments stated the impossibility of verifying that contacts were indeed made while operating mobile. It was also noted that all DXCC awards today are based on either mode or band.

Be careful about doing this. This cleaner typically contains silicon as a lubricant and
can cause more harm than good if it inadvertanetly gets on some components. I had some personal experiences with circuits being detuned and once had a crystal quit working. I don't understand how it affected the components, but a there was some speculation among some EE friends here at the Labs that the silicon was probably to blame. You are probably better off using a non-lubricating
cleaner.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 06/2330Z DECEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 06 DECEMBER AND FORECAST FOR 07 DECEMBER - 09 DECEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 78/17

GOES satellite data for 05 Dec
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: 1.1E+04
Daily Electron Fluence >2 MeV: 1.5E+08 (moderate)
X-ray background: A4.7
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
07 Dec 08 Dec 09 Dec
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 07 Dec: 80/20

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active, with a minor
storm period 06-09UT.

Estimated Indices : A K Observed A Index 05 Dec
Learmonth 22 3354 4432
Fredericksburg 15 7
Planetary 14 7

Observed Kp for 05 Dec: 1113 3212
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
07 Dec 15 Mostly unsettled to active, with brief minor storm
periods possible.
08 Dec 10 Quiet to unsettled
09 Dec 8 Quiet to unsettled
COMMENT: The disturbances noted on 6 Dec and expected on 7 Dec may
be due to a coronal hole, which was not geoeffective in previous
rotations.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
06 Dec normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
07 Dec normal fair-normal fair
08 Dec normal fair-normal fair
09 Dec normal normal fair-normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
06 Dec 31 near predicted to slightly enhanced until 19UT,
15-30% depressions observed thereafter.

Predicted Monthly T-index for December: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
07 Dec -10 15 to 20% below predicted monthly values
08 Dec 0 Depressed 15 to 20%/near predicted monthly values
09 Dec 10 Near predicted monthly values

COMMENT: IPS HF communications Warning 13 will be issued today for
interval 07-08 December.

>scanner enthusiast!

It is no more reasonable for the police to have unlicensed amateur equipment (no station license) with intent to use it in some pseudo-emergency than it is for Joe Ham to modify his HT with intent to use it on the police dispatch frequencies when he needs to call for help out in the boonies.

The cellphone is a valid point -- if you were making these preparations for emergencies, you can prepare to use legal communications systems. (These modified radios are not legal on the 'other' service, as they have no type approval, and no station license for that service.)

The original author could have probably found someone on 146.52, or by looking up a repeater in the repeater directory if he had one. He was proposing to solve a problem for which solutions already existed.

|> ignore him as trivial. There is lots of qrm on 75 meters as most of you
|> are aware.

....Rest deleted....

There are two basic answers to your problem:

1) To conduct your net: I assume that you really do want to conduct your
net, rather than get this guy - that should be a secondary consideration.
Well, move it. No-on has any rights to any particular frequency on the
amateur bands - yes I know it seems to be giving in to the b*****d, but
it enables you to get on with your interests, and avoids getting involved
in any squabbles about squaters rights on any given frequency - good manners
dictates that you avoid known, established, net frequencies, but thats all.

2) Photocopy the relevant part of the regs. Mail it, together with
a POLITE letter to this "gentleman", explain that he is in breach of
the regulations, and suggest, again politely, that it would be a good
idea to stop. Copy the letter to the FCC.
If that doesn't work ...

3) Get a copy of the current regs. They are quite explicit about broadcasting.
Quote chapter and verse to the FCC, acompany this with a tape of the
offending transmission. Contact the local police, wherever, in Maine,
explain the problem to them - again quoting FCC regs. If all of that fails,
I suspect that this is close enough to a federal offence for you to
consider contacting the FBI.

Maybe Newt is feeling busy ?
You could try to attract his attention by calling "uncle Rush", and complaining
publicly about his lack of interest in helping one of his constituents
in a case where a federal office (FCC) is blatantly ignoring its duties.

Be a big enough pain to enough people, and they will do something.
Trying to fight it out on the air is just NOT the way to go.

In short, be polite, persistent, and a pain in the butt to people who are not doing their job(s).

Philip

Do you really believe that it's unreasonable for law enforcement agencies
to monitor and transmit on amateur frequencies? This is hogwash, Alan.
While I was a Coast Guard radio operator (the CG is the US maritime
law enforcement agency so this analogy is valid) we would frequently
come up on 20M SSB with 10kW to assist a pleasure boat in need of
assistance. Was this `unreasonable'? We had no amateur station license
and surely the power we were running was many times over the legal limit.
Should we have told the boat owner that he should have invested in a
a marine band radio to call us rather than making us use the ham
frequencies?

>bought him a 2-meter radio.

There's one exception to the rule -- non-type-accepted power amplifiers
(other than old ones made before the rule went into effect) can only be sold
by a ham to another ham, by a ham to a dealer (as a trade-in for example) or
to a ham by a dealer *who bought it from another ham.* The type-accepted HF
amps, of course, don't work on 10 meters (or 12m for that matter).

(I'm not sure what happens when an OF croaks and his non-licensed XYL sells
his upgraded-to-10M linear...:-)

Dale Mosby <dale@sequent.com> writes:

>So my question is, why do we hear the stations so well when set to
>the incorrect sideband? Is this expected?

It depends on your receiver and how you use it. To receive any SSB transmission, you need to (1) have the sideband in your receiver's bandpass and (2) have its reinserted carrier in the right place (below a USB signal, above an LSB signal). Some receivers, if adjusted "improperly," could easily satisfy those two conditions with the selector in the "wrong" position -- though you might not read the right frequency on your dial if it happens.

This isn't all that different from an old TV set with a wafer-switch or turret tuner that gets cable channel 23 just fine with the tuner set to 13; it's where you're REALLY tuned that counts, not what the switch settings say.

It most certainly IS a Federal matter, so it's the FCC, the FBI or nothing.
Local police departments won't bother with this stuff -- they literally are
not paid to enforce Federal laws, as that is the job of the Federal
Government. (I don't mean that a cop will turn his back on a bank robbery,
just that they have better things to do than nail a guy for violating FCC
rules.)

>Thanks!

>-Brian n8wrl

I recently was an operator at Multi-Single station during the CQWW contests.
Both the other operators had a Time Wave device. One had the DSP-9 and the
other the newer model.

I brought my FT-990, which has the 250 Hz IF filter, and the built in DSP
with non-automatic notch filter and bandpass functions.

ON 160 and 40, the timewave automatic notch was quite useful, but as a long time
CW op I have learned to listen to one pitch out of several, and as a
non-Time Wave owner have become quite adept at grabbing the pass band tuning
knob to slide to wine side of a carrier.

ON 80-10, where the broadcast carriers are less common, the time wave had the
annoying habit of grabbing some nearby SSB or CW signal, and AGCing on it,
thus reducing the level of the signal _in_ the passband, sometimes enough to
make them harder or impossible to read.

The trouble with any audio filter, (remember the 88 mH toriods and active
filters?) is that they are _AFTER_ the radios AGC loop, and so tend to do
this annoying thing in todays crowded bands. The only way to solve this problem
is to do as Ulrich Rohde describes in the current issue or QST: make the
DSP fast enough to _BE_ the IF strip and do the AGC as one of the DSP functions!

When these Tranceivers are available, I'll be buying one. Until then, I'll
use the neural network I was born with, and have spent 20 years programming.

My brain.

3735. Need Motorola MC3335 IC

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-07 04:51:29 UTC
From: hduff@humnet.westonia.com
Message-ID: <7558-167864601@humnet.westonia.com>
Source record: 255399

I am in great need of 1 or 2 Motorola MC3335 dual conversion receiver
chips for a receiver project in the October issue of 73 magazine.
("The Traveller")
Apparently the chip is no longer made (obsolete) and the source of that
part as referenced in the article has none left. (DC electronics)
I'm sure this was an oversite by the designer/author of the article but
it sort of renders the project completely useless as the chip is the
heart of it. I already went thru the trouble of etching my own board
and collecting & assembling all of the other parts for it.
I've tried some local sources here in Toronto as well as some mail order
houses in the US like Mouser and Digikey.

Does anyone have 1 or 2 MC3335 IC's kicking around or know where I can still get
them ? Your help would be much appreciated !
Please reply by e-mail if possible : hduff@humnet.westonia.com
Thanks...Hugh VE3OYH

Now I understand why you prefer high speed data transfer, Gary. That's a lot o' bits in your reply! You've got some good advice on techniques there, but you certainly didn't try to encourage Doc to develop a better attitude about Code...and that may actually be the most important factor of all. It is very difficult to learn something you really hate regardless of what "operant conditioning" techniques you employ.

Our other disagreements aside for the moment, there is one thing which really bugs me...the term "wetware modem" that you use. The implication is that the use of one's mind to decode Morse is somehow a waste of time since modems/computers can do it so much better. "Why try to emulate a modem?" you ask.

In 1838 Morse invented the code and intended that it be received by a simple machine and traced on paper as a series of dots and dashes which would be translated later by the operator. Telegraphers soon realized that the code could be copied and deciphered by ear, and decoded instantaneously. That is the primary way the code has been used since. It was never designed or intended to be mechanically or electronically decoded, mainly, of course, because the technology did not exist.

Well, now it does. And that is great. Really. But it would be much more accurate to say that our modern modems are emulating our minds, and thus you should call modems "hardware brains" or maybe "electronic CW operators".

Simply because a computer can do certain operations much more efficiently than the human brain, it would be ludicrous to say that someone who chooses to _think_ is wasting time using his "wetware computer".

Actually, that term ("wetware modem") is insulting and its use attempts to diminish the wisdom and value of developing the operator skill of manual Morse. Which, I'm sure, is the reason you like the term so much :-)

You are fond of saying that you are not "anti-code" but are "anti-high-speed-code-testing". What you _say_you_are_ seems strongly contradicted by what you _say_.

My apologies for the length of this post...should have used
some high speed data mode!

73,
Greg WB0RTK (now only posting once a week, no matter how much bait you
cut! :-)

The ARES people in one area of Washington have been told bluntly that they are not needed because they have an abundance of volunteers and access to cellular phones. When they have practice drills they simply bring out boxes of cellphones and hand them to their volunteers as they report for assignment.

Works just great as long as someone charges the cellphones up before the drill....or as long as they have prior notification of a disaster.

Hmmmm.... more thoughts on emergency frequencies.

Here in California there were a couple of HF frequencies that were used for emergency works... 7255KHz during the day (WCARS) and 3952KHz (WPSS) at night. The system worked fine for several years. Unfortunately, some hams decided that these were not appropriate uses of amateur spectrum and proceded to jam the otherwise useful service nets. Sadly, the nets eventually failed (it took several yearss of unpleasentness)...(WPSS may still be on - I've not been on 75 in a long time!)

The 14.313 debacle is a well known attempt that also seems to have not worked very well. Every time I've ever listened either it was similar to the old 7255 mess or the band was closed.

What will it take to establish a standard emergency channel in the ham bands? The first thing that HAS to happen is either an effective way to deal with jammers or a change in the way certain peoples egos work (I'm not holding my breath on the latter!)

>73 Dan
>KA0EOF

Dan,
These are the 4, 6, 8, 12, 16, and 22 MHz maritime CW segments. 500 kHz
is (was?) the gathering place after sundown for transoceanic comms but
come sunrise only coastal comms are possible (~300 miles) so at
various times of the day the above frequencies are used. Shore stations
are assigned a single frequency in each of the above six segments; on
that freq you'll here their CQ tape (``CQ CQ CQ DE NMO NMO NMO QRU?
QRV OBS AMVER QSS 4 6 8 12 16 22 MHZ AR'') when they're not working any
ship, and they use that same frequency when passing traffic, also. So
shore stations are crystal controlled. On the other hand, ships
call shore stns on a calling segment, not on a fixed freq. Thus,
shore stations have to have a scanning receiver to cover the
ships' calling segment; it sounds terrible to listen hour after
hour to your receivers running (scanning) continuously through these
calling segments (run your rcvr through the 40M CW segment back
and forth without stopping for a few minutes, and at the same
time run a second rcvr through the 80 CW segment - see if you
could hear someone calling you while twirling both tuning knobs).
We'd have say, 8 mc scanning in the left ear and 12 mc scanning
in the right.

There's two other subsegments in each of these bands: ships with
low traffic volume, and ships with high traffic volume. So once
a ship is able to make contact with a shore stn on the calling
segment (the ship might have to send the shore's callsign dezens
of times until the shore's scanning rcvr moves over the ship's
freq) he tells the shore stn which freq he's QSY'ing to. Again,
the shore station stays put while the ship QSY's.

500 kc is the only maritime freq in which both ships and shores xmt and rcv on the same freq. That's what gives 500 a `party line' effect.

Ships have 4 character callsigns (FJNW, 3ZTU, F7PK for example) while shore stations have 3 character calls (9AU, FUM, KPH), although there are exceptions: Coast Guard Station Monterey (Central California) has the callsign NMC6.

Look in the government documents section of your library for the publication titled WORLDWIDE MARINE WEATHER BROADCASTS (or something like that) for a list of all maritime shore stations; that pub gives their broadcast times and freqs.

Yeow! Ask a simple question and just look at the answer you get!

73 from Hawaii (didn't even get up to 80 degrees today - winter has arrived),

Greg and Mike,
Name here is Roger, KD6CC. Just a few comments.
I have been a Ham for the last 28 years, and although recently have been playing around with the digital modes, my first love and that which I return to for relaxing communication pleasure, is CW. CW is a second language for me after all these years, I can copy and send at 40 wpm, but am comfortable at 30 wpm. Now, I say these things because when I first started in amateur radio in 1965, I was saying THE EXACT THINGS you fellows are now saying.

I can't speak for some of the guys you have heard "bad mouthing" new cw'ers, If what you say is true, then they are the uncouth uncivilized individuals for they have forgotten that they also experienced the same hardships you guys are now. ALL OF US do! I personaly am thrilled to death when I hear new hams talking and conversing about learning the code, because the "Incentive" (the necessity, when I first was licensed) has wained considerably and I enjoy helping the guys whom want to learn, learn. However, I do not spend very much time at all in the novice portion of the bands, and maybe that is for the better?

I remember when I was learning and had my first novice call, WN6UEN, that all the guys in the novice bands were novices. It became a support group, as we know them today ie; everyone helped each other in improving code skills. Each were peers to the others, no one had anything to prove other than improvement.

SO, stay with it, it does pay off. You will meet the nicest people in the CW portions of the bands, DX is easier to work down there. I hope to run into you on the bands one day.

> I have been trying to use 73cm as I use 2M, and am stymied.
> Stations I work simplex on 2M with good copy disappear when
> we try 73cm.

It depends a lot about the terrain and about antennas used.

If both antennas are omnidirectional (as in a contact between
two HTs), the received signal is theoretically about 10 dB weaker
at 70 cm due to the reduced capture area of the receiving antenna.

However, if directional antennas with similar physical size on 2 m
and 70 cm are used, you can get a stronger signal at 70 cm.

> A local repeater with a "talking S-meter" gives
> me reports that my signal is S9+10 for a day or two, then
> it drops to S6 and stays there for days. I use a high-gain
> vertical base station antenna which has been stabilized to
> eliminate flexing in the wind, and all my connections are
> weatherproof.

What do you mean by a local repeater ? 1 km, 10 km or maybe 100 km ?

If the repeater is closer than 10 km and those "S-meter" readings are
reliable (which I doubt) a variation of nearly 30 dB is most likely
caused by multipath propagation. Your signal arrives via two separate
parallel reflexions to the repeater with allmost equal strength.
If the path length difference is close to an odd multiple of a half
wavelength, the signal will allmost cancel and you get the S6 reading
from the repeater. If the path length changes by a few centimeter or
if the strength of one of the reflection changes with a fraction of
a decibel, cancellation will no longer occure and you get the S9+10 dB
report, which is closer to the average, if only one signal path existed.

The reason that the path length changes can be a change in the weather
(watch the temperature and humidity) or a change in your local
environment (parked cars etc.).

Note that you can have problems hitting the repeater even if you receive
the repeater at S9, since the repeater receives and transmits on different
frequency (and thus different wavelengths) and the multipath nulls are in
separate physical places. Try some other location on your roof and you
may find a place where both transmission and reception works great.

A high-gain vertical base station antenna concentrates most power close
to the horisontal plane, but there can be a lot of minor lobes in the

vertical radiation pattern and deep nulls between them. This can also cause strange signal strength variations. IMHO there is not much point of using high gain vertical omnidirectionals, if the antenna is so low that the main path of propagation is through reflections (such as in mobile communication or if the antenna is close to the roof). To get the best performmance from such antennas, it should have a more or less unobstructed view to the horizon.

> And can anyone tell me what 73cm
> is good for...some of the folks around here are expresssing
> regret that they ever bothered with 73cm.

For mobile communication with an omnidirectional antenna mounted outside the car, 2 m may be more suitable, particulary for rural communication. 70 cm and 23 cm are great for urban communication, the waves reflect from smaller surfaces and go through smaller holes than 2 m. While a HT inside a car is more or less useless (Faraday cage), 70 cm and 23 cm will go through the windows allmost undisturbed. 23 cm works much better than 2 m in some tunnels.

Shorter wavelengths are also great for point to point, when you can get highly directional beams with small yagis, which do not horrify your neigbours.

> And is it
> true that 73cm has more tropospheric enhancement than 2M, as
> one of my resource books claims?

It depends on the depth of the inversion layer. A very thin layer (10-30 m) will only support microwave ducting, while a thicker layer (30 m - 100 m) will also support 23 cm and 70 cm. Even thicker layers are required to support 2 m ducting and in many cases the bottom side of the layer can hit the ground before this happens.

> Thanks for your response.

I hope that you will find that 2 m is more suitable in some cases,
while the UHF bands can be more suitable for other type of use.
Use that band that best supports your needs in each particular case.

I'm wondering about the current Technician study guide. Is it current as far as the question pool goes? My wife has expressed an interest in getting her ham license and I want to get some study material that is up to date. This would be real nice. I'd love to be able to contact her on the radio. Problem is, she'll be able to track me down, too. ;-) Oh well, the good with the bad, huh?

>there will be exceptions. Rudeness knows no CW speed or license class.
>
>Jeff

You are exactly right, Jeff, and I did take a little poetic license with that message. I've run into a few people on the air calling CQ at speeds faster than I can copy so I send QRS? to see if they're in the mood for a little slower pace. OK, so maybe 10wpm sounds like a snail's pace to someone used to working 20+wpm. :-) Anyway, some gladly slow down and we get into a nice, leisurely conversation. Some slow down just long enough to exchange information and move on. Some go away. I don't consider any of the three groups rude. For all I know the person calling isn't in the mood to work slow-speed tonight.

I have found that speed is generally a relative term. I remember when I was first learning that 8wpm sounded very fast. Now that I've finally hit 13wpm, I find 10 to 13wpm is comfortable but 5wpm seems to drag on forever. Granted, 20+wpm still seems like a long way off but I'm continuing to push toward that goal.

Let me also take the opportunity to thank everyone that has taken the time out to work those of us still struggling with CW. I know there has been at least one time where I got a little cocky in my sending speed when calling CQ. It'd didn't take long for the KE4DPX DE SOMETHING NAME IS SOMETHING IN SOMEWHERE. KN to set me straight. :-)

By the way, I always be sure to have at least two cups of coffee in me after that one. ;-)

The other guy was kind enough to slow down and then went on to describe
when he did exactly the same thing.

Hi Brian,

The DSP filters are nice, especially the Timewave DSP 59+ and the 9+.
But I have come to the conclusion that if one has an FT-990 a DSP
filter isn't needed--everything can be done at the lower right on the
FT-990--I'd go the 250 Hz filter.

For my rig (Drake TR-7) the DSP unit works nicely.

If you were anywhere near HRO New Hampshire you could go in there and
check out the DSP units and even hook them up to the FT-990 and
see what you think. I have used the 59+ with the 990 and really
think you could get by without it. But that is your decision.

>DSP is great! Unfortunately, no one in the ham field has yet to imple-
>ment DSP in the IF chain (except for Watkins-Johnson, and that's a
>$3,700 receiver). As a result, what we know as "DSP" is AUDIO DSP.

Kenwood has had DSP in the IF chain of TS950SD, TS950SDX, TS850 with DSP100
and even the TS450S with DSP100. In such radios, with the optional
DSP100 if necessary, an additional conversion is done to produce a
38kc IF that is modulated/demodulated using DSP. It does not provide
the fancy filtering features that the Watkins Johnson does. Probably
because the DSP chip does not have enough horsepower to do the more complex
filtering. Modulation/demodulation is much easier in comparison.

97.1(a)(10) Broadcasting. Transmissions intended for reception
by the general public, either direct or relayed.

Our friend in Maine is not broadcasting because he's not transmitting
signals indended for reception by the general public. Rather he is
transmitting, like W1AW, on amateur bands, in modes used by amateurs,
for reception by amateurs. If his intent was to reach the general
public, he'd use modes and frequencies in common use by the general
public for reception of broadcasts.

The FCC seems to buy this line of reasoning, because he's been doing
it for years, as has W1AW, with no NALs issued, and the FCC is certainly
aware of these operations.

In <3c2hdt$k81@cville-srv.wam.umd.edu> ham@wam.umd.edu (Scott Richard Rosenfeld) writes:

>DSP is great! Unfortunately, no one in the ham field has yet to imple-
>ment DSP in the IF chain (except for Watkins-Johnson, and that's a
>$3,700 receiver). As a result, what we know as "DSP" is AUDIO DSP.

Regarding the Watkins-Johnson, QST (I think) reviewed it in the December issue. There was also a nice photo of the wide-open and uncluttered internals of the 19-inch rack-mount cabinet.

They very obviously spent no money at all shielding the high-speed digital processing components from the analog portions of the system. This explains the poor review as far as spurs and other noise getting into the audio output. Too bad. I hope this poor shielding job doesn't give DSP demodulation (and it's potential) a bad name among radio amateurs.

In article <R4y3O0u.edellers@delphi.com> Ed Ellers <edellers@delphi.com> writes:
>It most certainly IS a Federal matter, so it's the FCC, the FBI or nothing.
>Local police departments won't bother with this stuff -- they literally are
>not paid to enforce Federal laws, as that is the job of the Federal
>Government. (I don't mean that a cop will turn his back on a bank robbery,
>just that they have better things to do than nail a guy for violating FCC
>rules.)

Local authorities not only are not paid to enforce Federal laws, they
aren't *empowered* to do so. They have no more authority than any
ordinary citizen in these cases. (Bank robbery is usually a State
crime as well as a Federal crime, and local authorities *are* empowered
to enforce State laws. They'll arrest the robber, but they won't charge
him with a Federal crime, they'll charge him under the State statute.)

If you do something illegal under Federal law, but OK under State law,
local authorities have no power or authority to intervene. And vice versa,
just because something is legal on the Federal level doesn't necessarily
mean you're immune on the State and Local level unless Federal pre-emption
has been invoked.

: >Oh thank goodness. Fred is here from Prodigy to set us all straight. :-)

: Actually, it's nice to have someone on here who knows the rules
: forward and backward. Now Fred needs to provide the definition
: of `broadcasting', and explain why the guy up on 3975 kHz with
: his nightly non-broadcast broadcast from Maine is not really
: a broadcast, even though it sure sounds like a broadcast.
: (Gee, I hope that was clear...) This Maine ham even repeats
: his 45 minute non-broadcast broadcast every two hours just in
: case you missed it the previous times.

: Jeff NH6IL

In case this was a serious question and not a retorical one, I'll post
the answer I received once I asked the same question.

The guy on 3975 is a lawyer and understands something about the
"equal protection under the law" concept. Since W1AW is essentially
broadcasting, he figures the FCC might have a problem charging him with
anything and making it stick, if they don't do something about W1AW.

Now, I'm not defending him, nor am I suggesting that he is doing
anything wrong. I was just repeating what I heard.
(Objection, your honor! That's hearsay! "Sustained!" claimed the judge)

Take it for what it's worth. I consider it a lot like the bible study
groups. Do you really want that crowd spread all over the band? I'd
rather keep them all on one frequency.

: to go than getting a narrower CW filter for my rig? If so, can you
: recommend any?

As you've probably already noticed, in this life there's really no solution to any problem that works perfectly all the time. I've got both an NIR-10 DSP unit and an analog FL-3, and in combination with the notch, passband shift, noise blankers and narrow filters in my NRD-525, I can _almost_ always extract and prettify any signal of interest, using one or another of the features in combination. Some combinations are purely personal aesthetic preference, e.g., I use a narrow IF filter and the FL-3 CW peaking function for CW, just because it sounds better to me most times than the equivalent functionality of the NIR-10. The NIR-10 usually works great on atmospherics and certain local EMI, and the internal noise blanker knocks out the neighbor's blender better than the NIR-10. Most of the time. A multitude of tools, creatively applied, can make a big difference, but what's best is very, very variable.

I have noticed, though, that having adequate filtering at the IF, makes the audio gizzies work that much better. It's the RF design equivalent of kicking them when they're down.... };-]

: on 160M and part of 80M. The inductor became very hot while
: operating the 160M contest this past weekend. As the heat
: rose power output fell.

: My question is how does one determine the proper size of
: toroid for this application. If Power ~ Core volume, then
: it follows that by increasing core size will allow greater
: power handling capability. None of the amateur references
: I have (87 handbook) deal with the power issue and Sevick
: only deals with it in general terms in his "Transmision
: Line Transformer" book. What I need is hard facts
: and formulas.

I've not found what you are looking for--and neither has
the ARRL Handbook editor been able to find someone who
will produce the formulas you want.

However, what you can do is measure the Q of the core,
and analyze the network to determine how much power is
lost in the inductor. I've heard of people using forced
air cooling to increase the power handling capability.
Computers are useful for dealing with the complexities
of unknown output impedances and matching networks.

The inductance will drop markedly once you reach what is
known as the curie temperature. However, according to
Micrometals, for iron powder materials it is a few
hundred degrees Celcsius. On the other hand, a small
decrease might detune the network enough to increase
circuit losses, resulting in even more power lost.

3760. Lithium battery questions

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-07 15:11:58 UTC
From: aswNS@hamp.hampshire.edu
Message-ID: <3c4jbu$16j@gort.oit.umass.edu>
Source record: 255488

My TNC (a KAM Plus) has a lithium battery, RayOVac BR2032, for memory backup. I have had some problems with losing configuration info, and I measured the battery voltage to be about 2.94 volts. My reference source, Horowitz and Hill's _The Art of Electronics_ (pp. 921++) gives me the impression that a "3 volt" lithium cell ought to maintain close to 3.5 volts for most of its life. However, there are apparently a number of different types of lithium battery, and I don't know if their curves for an LiSOCl2 cell apply to the kind of cell I am using.

My questions are:

1. Does 2.94 volts from an Li cell of this type indicate it is at the end of its life?

2. Should a memory circuit designed to be backed up by a lithium cell begin to have problems when the voltage is still that high? (I remember from transistor design manuals that battery operated circuits are often designed for a 50% voltage endpoint with less exotic battery technology).

>try to encourage Doc to develop a better attitude about
>Code...and that may actually be the most important factor
>of all. It is very difficult to learn something you really
>hate regardless of what "operant conditioning" techniques
>you employ.

I suspect it's pointless to try to convince someone who really
hates something that he really likes it. So I don't try that
tack anymore. I agree with the person that whatever he hates
is indeed horrible, but then proceed to tell him how to beat
it anyway. That approach usually is more successful in getting
them to *try*.

>Our other disagreements aside for the moment, there is one
>thing which really bugs me...the term "wetware modem" that
>you use. The implication is that the use of one's mind to
>decode Morse is somehow a waste of time since
>modems/computers can do it so much better. "Why try to
>emulate a modem?" you ask.

I find the term very useful in conveying the process to people
familiar with computer technology. They know what a modem is,
but most of them, unless they've studied brain physiology, don't
understand how their brains perform the same function. It's a
useful analogy that actually has a physical basis. Areas of the
brain *are* doing the functions a hardware modem would perform,
but in the wetware of their neural nets instead of in silicon.

Whether silicon hardware modems are better than wetware modems
is a separate issue. They certainly are for uniform synchronous
codes using coherent signaling in the presence of noise, but for
non-uniform asynchronous codes using on-off keying in the presence
of noise, they may or may not be better at this time than a wetware
modem. Transcoding the latter encoding is definitely a more taxing
chore than transcoding the former since it is not as well formed
for optimum reception under harsh conditions. That says to me that
changing the encoding method used is the more logical course, since
hardware can decode proper codes under much more severe conditions
than wetware modems can decode OOKed non-coherent codes. (If this
were not so, NASA's Deep Space Network would have banks of headphone
wearing operators copying Morse from their probes instead of doing

it with hardware using an optimized uniform code. We all acknowledge
that *sending* OOK Morse is a trivial task for a machine, so their
use of a more computationally intense encoding must be for reasons
of superior receiving performance.)

>In 1838 Morse invented the code and intended that it be
>received by a simple machine and traced on paper as a
>series of dots and dashes which would be translated later
>by the operator.

That's correct, Morse Code was never intended to be decoded by
ear. It's a code designed to be sight read.

>Telegraphers soon realized that the code
>could be copied and deciphered by ear, and decoded
>instantaneously.

Not instantaneously. According to a recent published study,
aural symbol recognition hits a fairly hard wetware barrier at
five symbols per second. This limit is due to the propagation
delays through the neural pathways connecting the aural centers
with the higher pattern recognizing areas of the brain. The visual
limit is much higher (somewhere around 2,000 to 10,000 symbols per
second) because the brain uses a great deal of distributed processing
for visual images along the pathway between the sensors and the brain
areas devoted to visual pattern recognition, IE it's a structured
pipeline with parallel pre-processing. This leads to the interesting
fact that more complex visual patterns are recognized quicker than
simpler stimuli because the early pre-processing condenses the symbol
space more efficiently. If the brain used this methodology to
process aural stimuli, Morse Code would be trivial to recognize
by ear at speeds similar to those achievable when reading written
text, typically 1,000 to 2,000 WPM.

>That is the primary way the code has been
>used since. It was never designed or intended to be
>mechanically or electronically decoded, mainly, of course,
>because the technology did not exist.

Actually, as you pointed out above, it *was* intended to be
mechanically transcoded into graphic form.

>Well, now it does. And that is great. Really. But it would
>be much more accurate to say that our modern modems are
>emulating our minds, and thus you should call modems
>"hardware brains" or maybe "electronic CW operators".

That's not a terminology that would relate well to computer
literate people. Electronic "brain" is a term that has fallen
into disrepute due to popular media exploitation, similar to
the corruption of the respectable term "hacker".

>Simply because a computer can do certain operations much
>more efficiently than the human brain, it would be
>ludicrous to say that someone who chooses to _think_ is
>wasting time using his "wetware computer".

"Think" is a somewhat ambiguous term, but decoding Morse isn't
within it's purview. In fact, "thinking" about Morse while
attempting to decode Morse can interfere with the process.

>Actually, that term ("wetware modem") is insulting and its
>use attempts to diminish the wisdom and value of developing
>the operator skill of manual Morse. Which, I'm sure, is
>the reason you like the term so much :-)

Any insult appears to be in the eye of the beholder. I like
the term because it accurately conveys the sense of the
processes occuring in the brain during the transcoding
process in a way that relates well to a computer literate
audience.

>You are fond of saying that you are not "anti-code" but are
>"anti-high-speed-code-testing". What you _say_you_are_ seems strongly
>contradicted by what you _say_.

I have a personal dislike for Morse based in part on the factors I
listed above, IE I dislike Morse in the same way I dislike Cobol for
scientific problems when APL or Fortran are available, but that doesn't
make me against it's use by others (how laborous their programs are to
write isn't of much concern to me as long as my programs can be developed
and executed quickly). I *am* against testing Cobol proficiency in order
to be permitted to use APL, however, knowledge of one is not relevant to
use of the other, though both can be used on the same computer.

>My apologies for the length of this post...should have used
>some high speed data mode!

You did, imagine how long it would have taken using Morse.

FISTS is an International organization. The United States representative
is Nancy Kott, WZ8C. She can be reached by USnail at:
PO BOX 47, Hadley, Michigan, 48440-0047.
Phone #1-810-797-5388.
Although I am not officially a member, I have interviewed Nancy on my
radio show a number of times. FISTS does many things to keep it
exciting, including nets, contests, special QSL cards, and a great
International newsletter.

Doc,

I tend to strongly disagree with you. Here's something that kept me going in boot camp and throughout my military career (and this includes learning the code because that's my job!). You stated that you have a BS and MS. So that means that you're definately NOT dumb. I'd say far from it!

Do you think that you're as smart or smarter than any other ham that has learned Morse? Also ask yourself if you had a lot of determination to obtain your degrees? Well, it takes about a millionth of a percent of the determination, intelligence, and willpower to learn Morse and be able to copy it and send it at 20 WPM or faster!

On top of that, from the tone of your article it sounds like you HATE the code and are already admitting defeat. If you put that idea in your head at the start, you're cutting your nose to spite your face.

Of course I am not posting this article just to quote from silly cliche's, but think about it. If you say you can't do something, then guess what...you won't be able to do it. Don't hate the code, embrace it! It's a wonderful way of communicating. On top of that, I like to find people who send extremely fast as to challenge myself to copy them.

My advise to you is, rethink your position. Look at it not as having to become that blacksmith, but having to take those prerequisite classes in college that have absolutely nothing to do with your BS or MS. It makes the well rounded ham!

I hope I've helped with my post. Have fun and hope to meet you on the air very soon! Good luck, mate!

Does an equivalent to the DX Packet Cluster software exist for people
on the Internet? I can see how such an Internet Packet Cluster site
could be useful for amateur, shortwave, and utility DXing.

Again this year for the holidays 19 DECEMBER 1994 to 1 JANUARY 1995 The Western Amateur Radio Association (WARA) will open their autopatch to the amateur public. This is a "low level" 2 meter repeater located in Fullerton on 145.400 - and as such we request that you use a minimum of a handheld into an outside antenna. The area of coverage is the Orange and south LA county. The areas that can be accessed are (714) direct seven digit number and (310) dial 1 310 and seven digit number. We ask you to ID stating you wish to use the patch press PTT and then * A release the PTT and you will get a simulated dial tone. Press the PTT and dial your number. When the call is completed press #9 to reset the phone. Then ID stating the patch is clear. If you have any problem ask for assistance. Visitors to the Orange county area always welcome to the Repeater.

> recommend any?

Hi Brian, I had that same question, here is what I found. I like to work 40 meters, and that broadcast gave me greef. So I tried the NIR-10 DSP filter. That baby did the trick for 90% of the QSO's. But once in awhile that broadcast was right next to the pass-band of the rig and the NIR-10 did work, but then I bought a 400Hz cw Crystal filter for the rig. Now there isn't a signal I can't pull through the QRM.

I suspect that for 90% of the time a DSP is enough, but that 10% on 40 meters made me need that filter. I hope this helps and doesn't just make matters worse.

>filters?) is that they are _AFTER_ the radios AGC loop, and so tend to do
>this annoying thing in todays crowded bands. The only way to solve this problem
>is to do as Ulrich Rohde describes in the current issue or QST: make the
>DSP fast enough to _BE_ the IF strip and do the AGC as one of the DSP functions!

Just a note on this. Ten Tec used to use audio filtering in the audio line
BEFORE their AGC, thus eliminating the problem. This is true of rigs
from the 1970's in the Ten Tec line. Of course, this means that the AGC
was audio derived, and usually is not as smooth as when derived from the
IF, but is wasn't really bad at all.

I do agree that digital is the way to go, but wanted to note that this
particular problem, like many others, can (has been) solved in another
way....always at some compromise.

Source record: 255287

Albert S Woodhull (aswNS@hamp.hampshire.edu) wrote:
: My TNC (a KAM Plus) has a lithium battery, RayOVac BR2032, for memory
: backup. I have had some problems with losing configuration info, and
: I measured the battery voltage to be about 2.94 volts. My reference
: source, Horowitz and Hill's _The Art of Electronics_ (pp. 921++) gives
: me the impression that a "3 volt" lithium cell ought to maintain close
: to 3.5 volts for most of its life. However, there are apparently a
: number of different types of lithium battery, and I don't know if
: their curves for an LiSOCl2 cell apply to the kind of cell I am using.

: My questions are:

: 1. Does 2.94 volts from an Li cell of this type indicate it is at the
: end of its life?

I have a Panasonic data sheet that is somewhat dated and gives
the following information:
Compared to the CR series, the voltage characteristics of the BR
series is more stable, showing less change during the last half
of discharge. Also, the CR series has a higher voltage
characteristic during the first half of discharge than does the
BR series.

They indicate that a BR2032 is remains at ~2.75 V for 90% of its
life and drops suddenly.
A CR2032 starts at 3.0 V and drops slowly for the first half
of its life to ~2.8 v and then more rapidly goes through a knee
during the second half.

3778. Problem with Kenwood TM-251A, DTMF, and autopatch

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-07 19:06:28 UTC
From: donahued@wc4.wl.aecl.ca
Message-ID: <7DEC94.19062820@wc4.wl.aecl.ca>
Source record: 255524

Hi,

A friend and I both have new Kenwood TM-251A 2m mobiles and both display the following problem with DTMF codes and the local autopatch.

(1) We store the DTMF code to access the autopatch into DTMF memory 0.
(2) We store the number to dial into DTMF memory 1.
(3) We store the DTMF code to clear the autopatch into DTMF memory 2.

We press PTT+PF and select 0, the autopatch activates as expected.
We press PTT+PF and select 1, the numbers to be dialed appear on the display and the DTMF tones are sent, but we get a message that "the call can not be completed as dialed, etc."

I tried the same thing with my HTX-202 and it all works fine, so there is not likely anything wrong with the autopatch.

We would appreciate hearing from anyone who has experienced this problem and has a solution.

Thanks in advance,

From: nasa@suns.chinalake.navy.mil
Message-ID: <D0GJC2.3yo@avalon.chinalake.navy.mil>
Source record: 255387

It seems likely to me that people in this group could be of great help with security system #2.

I need some help finding the "right" security systems for my cars. I have older vehicles I have put lots ot time and effort (and in one case LOTS of money) into the vehicles themselves. Not into audio systems or other interior bolt ons. Into drivetrain and suspenson. Unfortunately, the cars spend most of the time parked outside <sigh>. I need two levels of protection. Both have to be dead solid reliable. No false alarms and always funtion. The main purpose of the alarm is to alert me.

For both. Battery backup, auto arm, anti tow, anti jack, ignition/fuel disable, entry and also something to protect the car cover would be nice.

1. First type would be low end. The basic requirements mentioned above should do it.

2. For this vehicle I have a LOT of $s into it (for me) and the insurance co wouldn't give me squat. It also stands out a bit. If someone gets this one in any manner and I'm not there to stop them I want to find it. Anywhere it may be. No matter how it was taken and transported. I've thought of designing and building a GPS or Loran telemetry system to broadcast with confirmation to my home or to use cellular but just don't want to spent the time (but may have to).

I'd appreciate any and all help and pointers to sources, systems and methods. Experiences both good and bad would also help a lot.

I'm sorry if this is a FAQ but I seldom get to read the group. Also, if possible please E-mail me any suggestions so I will be sure to get them.

Date: 1994-12-07 21:27:44 UTC
From: jdw@apian.att.com
Message-ID: <D0GMA9.J5L@nntpa.cb.att.com>
Source record: 255511

I'm interested in how difficult it is to clean the contacts on the mode (or frequency entry) buttons on the front of a TS440s. I have two that are becoming very unreliable. They feel like rubber dome types that can typically be cleaned by disassembly and rubbing with a pencil eraser. Thought I'd ask if anyone has done this before I started. I believe the TS430s had the same buttons, so a 430 owner may also know how this is done.

Message-ID: <3c4u5h$33j@sefl.satelnet.org>
Source record: 255501

Sorry to bother you folks, but I'm looking for some helpful advice from responsible radio operators.

First, I'm not a ham operator, but I am a relatively new home owner. I'm having a problem with a neighbor who is running, I surmise, an illegally overpowered CB transmitter. The problem is that I've been picking up (REAL LOUD) his transmissions on two stereo systems and two telephones (one cordless, one not). For what it's worth, he's usually a bit tiddly (and beligerent) and seems to be of the flaming idiot persuasion, so trying to reason with him is not high on my list. For example, the other evening he was regailing us with how he had encased his antenna lead in galvanized steel pipe in order to (I think - we couldn't hear the other end of the conversation) keep it from safe from unneighborly types.

I know where the guy lives - the REAL BIG antenna is something of a clue. I have called the FCC once & got the standard issue publication explaining how it's all my fault.

I realize this is not your problem - if the guy was serious, he'd be licensed and not using a sissy CB - but any advice you can give to a clueless dude would be greatly appreciated. Reply here or to John.Senko@emich.edu.

Thanks.
John

>Simply because a computer can do certain operations much
>more efficiently than the human brain, it would be
>ludicrous to say that someone who chooses to _think_ is
>wasting time using his "wetware computer".

Do you know that the word "computer", up until the mid 50's or so, used to refer to a person? What we call just "computers" now were "electronic computers". ("electronic digital computers", actually, since "electronic analog computers" were pretty common too.)

The people who were computers generally worked with big mechanical calculators; a room full of them could perform several dozen floating point operations per second (the acronym FLOPS was not yet invented...)

What would you think of somebody today who needed some numbers crunched and chose to learn and use a mechanical calculator instead of, say, Mathcad, Mathematica or even good ol' FORTRAN?

Not that I think CW is quite the same situation; lots of folks think CW is just plain fun, while I never heard anybody say that about the old mechanical calculators. On the other hand, I wouldn't be surprised to find out there are a bunch of people out there collecting, restoring, and occasionally even operating those old grinders. But I doubt they're trying to get the government to ensure that everybody who wants to write a BASIC program knows how to use a mechanical calculator first.

Message-ID: <3c5a51$gi5@guppy.idss.nwa.com>
Source record: 255393

I'd be curious to hear from folks running 6 meter FM. What kind of equipment are you using? Are you using repeaters or simplex? How's does range compare to 2 meters or 10 meters in 'real life' scenarios?

If you happen to operate or know about repeaters that are on the air, what kind of equipment are the repeaters comprised of, how are you getting the needed separation (dual-sites, duplexers, dual antennas)?

I haven't been on 6 FM for over 15 years and will be getting back on this winter with a radio that will be far better than my 1950 vintage RCA dynamotor rig......

email or followup to newsgroup is OK....

As a no-code at present but learning it and up to about 7
or 8 words a minute, Gary's post was dead-on. If you are
considering to learn code, or currently learning it, read
Gary's message a couple more times.

I'm doing better now at 7 wpm than 5. Why? Because at
5, enough time goes by between characters to get me bored
and out of the correct state of mind that Gary was
referring to.

One thing I like about learning code is the satisfaction of
reward from hard work. It has taken me several months to
get to 7 wpm and it is rewarding looking back.

3792. Interference from CB

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-07 22:19:19 UTC
From: hamed@netcom.com
Message-ID: <hamedD0Goo8.7Hq@netcom.com>
Source record: 255518

Apart from chopping down the offending transmitting antenna or laying waste to his equipment, I would offer the following suggestions to interference-proof your equipment:

1. Telephones. Usually, it is the wiring in your home that acts as an antenna. If you can isolate your telephone from the wiring, that solves the problem. I am talking about telephone wiring, here. The trick is to isolate it in such a way that telephone conversations, which are audio frequency, still get through, while radio transmissions, which are radio frequency, are blocked.

There are two ways to do this. The inexpensive way is to buy or build a filter. The best one is the TII model 931-W1, which is available from your local Graybar store. It costs about $15. You will need one for each telephone.

Alternatively, you can buy an "interference free telephone" for about $50. Pro Distributors, Lubbock, TX 800/658-2027 and TCE Labs, Canyon Lake, TX 210/899-4575, both make them for about $75.

2. Stereo.
Usually, it is the speaker leads that act as an antenna, and you need to isolate them from the amplifier, without blocking the audio signal. The best way to do this is with a toroidal (doughnut) core made of a ferite material. These are available from Amidon, Fair-rite Corp., and others. I don't have the phone numbers handy. You should first ask for an applications guide, so that you select the correct mix of ferite (there are many) to suppress the CB'ers 27 MHz transmissions.

Good luck,

bob Weller

3795. Floating a battery on a PS

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-07 23:22:37 UTC
From: klf@ecdcsvr.tredydev.unisys.com
Message-ID: <1994Dec7.232237.23320@ecdcsvr.tredydev.unisys.com>
Source record: 255388

Does anyone know of an article that describes floating a battery on a power supply? I'd like to charge my emergency backup power source (deep discharge lead/acid) with my power supply. I would like the battery to provide power when the PS is off and for the PS to provide a charge to the battery and power to the rigs when its on. I've seen articles on this, but can't find them. There was probably an article in CQ or QST. Anyone remember any or have a schmatic?

Thanks. de KA3PLS

3796. Re: Problems with Interference from a CB

Newsgroup: rec.radio.amateur.misc

>
>Thanks.
>John
>

John,
ARRL infoserver has lots of info in this subject. Wish my last week
post was still active.

Send to:

info@arrl.org

reply (if different from header address)
send rfigen.txt (37k)
send rfisource.txt (13k)
send tel.txt (21k)
send tvi.txt (14k)
quit

That'll keep you busy for a while but give you some pointers.
If it is a CB, if he is operating illegally, you might get some
help from the FCC but don't hold your breath. You also should get
the FCC pub that has listing for all the manufacturers so you can
bullet proof your equipment.

Let us know how things are going.

Tony KN4TX

3797. ICOM servic cards.

Newsgroup: rec.radio.amateur.misc

Message-ID: <3c5htn$cu3@acme.freenet.columbus.oh.us>
Source record: 255515

When I was at Dayton this year - 1994 - a service rep for ICOM gave
me a card to fill out to get a replacement rubber keypad and front case
half for my tiny IC-2ia Hand held. I am still waiting for a reply from
these guys but as I was going to be sent the parts for free I didn't want
to seem over anxious. Now I am getting a bit mad at the fact that they
had said they would send the parts to me and I am still waiting.
Has anyone else ever used these cards and does anyone really send out
these small parts?
Please send me mail at smchenry@freenet.columbus.oh.us Thanks

3799. Morse code timing needed

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-08 01:55:41 UTC
From: srj@ESD.3Com.COM
Message-ID: <srj.786851741@orodruin.NSD.3Com.COM>
Source record: 255526

Forgive if this is a FAQ (I haven't got it yet) but I need to how to 'time' Morse Code; what I mean is, what is the specification for length of a dah versus a dit, and the length of the inter-character and inter-word gaps?

I saw here once before the entire timing specification; I could sure use it again!

Thanks a lot,

>
>Thanks!
>
>-Brian n8wrl

Hi Brian,

I would vote for the DSP audio filter. Here are the reasons I feel a good DSP audio filter is better than a 250 HZ filter for your rig:

1. The DSP filter has variable band width and much steeper skirts than the 250 Hz filter does. The steeper skirs mean ther is better adjacent frequency rejection.

2. The good DSP audio filters have hetrodyne rejection filter that automatically removes adjacent frequency hetrodynes when it is turned on. The rig filter can't do this at all.

3. Good DSP filters have a noise reduction mode that really works. Again the rig filter can't help you here.

4. The DSP filter works its magic on all modes. The rig filter only works on CW.

5. I can vary the bandwidth of my DSP filter down to 80 Hz. It works great at this narrow bandwidth. No ringing. It can also be adjusted to work on an AM broadcast station (very wide). The rig filter only works at 250 Hz.

A good DSP filter will cost a little more than 250 Hz filter but it will do much more for you.

Now comes the opinion. If I were to buy again today I would buy a Time Wave DSP filter. I feel they have the best technology for the dollar.

Good Luck.

Let us know what you decide to do.

Dunno what the FCC does, but the state motor vehicle people have been trading
lists of unusable three-letter combinations for decades.

3805. Re: Receiver? Scanner?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-08 05:27:34 UTC
From: Ed Ellers <edellers@delphi.com>
Message-ID: <B0xW242.edellers@delphi.com>
Source record: 255384

<tomyang@scipp.UCSC.EDU> writes:

>What's the difference between a receiver and a scanner?

That brings up some other interesting differences;

- A TV tuner vs. an FM tuner. (A TV tuner has an IF output to the TV receiver's main chassis; an FM tuner has baseband audio output to an amplifier.)

- A TV receiver vs. a satellite TV receiver. (The first has a screen to show the picture; the second only has video and audio outputs, to be connected to something else with a screen.)

Any others?

Rec.radio.amateur.misc Frequently Asked Questions
Part 2 - Amateur Radio Organizations, Services, and Information Sources
------------------------------------------------------------------------------

Questions discussed in Part 2: (dates indicate last modification)
** Where can I find Ham Radio information with a computer? (8/94)
* Mosaic, World-Wide Web, Gopher, and WAIS (8/94)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (10/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start? (2/94)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 2--
```

** Where can I find Ham Radio information with a computer?
This question has many answers spanning several electronic media including WWW, UseNet, electronic mail, the Internet, dialup BBS's and others. Various electronic information sources are summarized under the subheadings that follow.

All electronic mail addresses listed are in Internet format. If your site is not connected to the Internet and does not support Internet-style mail addresses, you will need to contact either your system administrators or a local "guru" to find out how or if you can send mail to the sites listed. Ask them, "how can I get mail to the Internet?" and show them the address you're interested in.

* Mosaic, World-Wide Web, Gopher, and WAIS
A new generation of information retrieval tools exploded into great popularity on the Internet in 1993 and 1994. They are the gopher protocol, wide-area information server (WAIS) and World-Wide Web (WWW). They are indeed complete topics of discussion unto themselves which can be found, among other places, in the following newsgroups:

comp.archives
comp.infosystems.announce
comp.infosystems.gopher
comp.infosystems.wais
comp.infosystems.www

Please read those newsgroups if you have questions about the software or how to use it.

At the current rate of growth, we can never hope to list all the servers. We would like cooperation from people who assemble WWW servers to add references to other useful Ham Radio information available at other WWW, gopher, WAIS, and FTP sites. That way the FAQ can direct readers to servers that can reference more servers with more information than we can include on a periodic UseNet posting.

Some useful URLs (uniform resource locators) which can be used with WWW (Mosaic, Lynx, etc.) are as follows:

rec.radio.amateur.homebrew Ham Radio - radio experimentation, kits
rec.radio.amateur.policy Ham Radio - policy & regulation
rec.radio.amateur.space Ham Radio - satellites, EME, shuttle/MIR
rec.radio.broadcasting public broadcast radio
rec.radio.cb Citizens' Band Radio
rec.radio.info (*) periodic info from all rec.radio groups
rec.radio.noncomm misc non-commercial radio topics
rec.radio.shortwave Shortwave Radio
rec.radio.scanner Utility Radio above 30Mhz
rec.radio.swap radio equipment wanted and for sale

Country- or region-specific newsgroups include the following:
aus.radio Australia (misc radio topics)
aus.radio.amsat Australia (amateur satellites)
aus.radio.packet Australia (packet radio)
de.comm.ham Deutschland/Germany
fj.comm.ham Japan
uk.radio.amateur United Kingdom
in.ham-radio USA, Indiana
sbay.hams USA, CA, South Bay Area/Silicon Valley
triangle.radio USA, NC, Research Triangle area

This FAQ is cross-posted to the newsgroups marked with asterisks (*).
It is also cross-posted to rec.answers (the archive for FAQs in the
rec.* newsgroups) and to news.answers (UseNet's general repository for
FAQs.) These should be the first places to look for new current
copies of the FAQ.

Most of the rec.radio newsgroups have their own FAQs as well.

* The ARRL e-mail server
ARRL is the American Radio Relay League, representing and promoting
Amateur Radio in the USA. They have established an automated file
server which responds to information requests via electronic mail.
To use the server, send mail to info@arrl.org with any number of
one-line commands in your message. Valid commands are as follows:

help sends more detailed instructions about the e-mail server
index sends a list of the files currently available
send file sends a file (replace "file" with the file's name)
several files are referenced by name in parts of this FAQ
quit ends command processing - use it if a signature will be
appended to your message

The server program will respond to the commands, each in a separate
message. Among many other informative files, a current copy of the
FAQ (updated monthly) can be obtained from the ARRL e-mail server.
Other parts of this FAQ refer to specific files on the ARRL server.

* The KA6ETB e-mail "HAM-server"
Steve Harding KA6ETB has an e-mail server on his 486 PC at home with
over 70 megabytes of Ham Radio-related files (at the time of this
writing.) You can request any of those files with an e-mail message
to the HAM-server at "ham-server@grafex.sbay.org". This site
has a mostly-different selection of files than the ARRL, though some
overlap is unavoidable. The HAM-server contains many plain-text
articles along with programs for MS-DOS & Windows, Unix, Mac, and
OS/2.

Use these commands to send requests to the KA6ETB HAM-server.
HELP instructions and info about the HAM-server
INDEX list of files available from the system
GET <file> send a file (see the HELP notes for more info on
getting binary files in uuencode or xxencode format)

NEWFILES <date> list of new files since the given date
PING used for testing your path to the HAM-server, it just
sends a simple reply so you can look at the path data
QUIT makes the HAM-server stop reading the message (so it
won't try to read your .signature)

Submissions for inclusion in the HAM-server may be mailed in UUENCODED
format to "incoming@grafex.sbay.org".

* The Internet File Transfer Protocol (FTP)
Sites connected to the Internet can access large amounts of data
almost anywhere in the world, often at high speeds. One common way
to transfer the data you want is FTP. Some sites offer a service
called "anonymous FTP" which allows remote users to access a set of
public files without requiring a password.

Perry Rovers coordinates a fairly definitive list (formerly
maintained by Tom Czarnik) of anonymous FTP sites, their IP
IP numbers, time zones, general contents, and access policies
which he posts to several newsgroups, including comp.archives,
comp.sources.wanted and news.answers. It is itself available
via anonymous FTP (how about that?? :-) from (among other places)
rtfm.mit.edu under directory /pub/usenet/news.answers/ftp-list.

For specific information about exact locations of files by name,
the Archie database server may be of help. First check if anyone has
installed the "archie" program on your machine and use it. Archie may
also be accessed by telnetting to one of many sites. The list
of archie sites is numerous and growing fast. For a current
list of sites, telnet to archie.sura.net (login "archie"), then
please use the one closest to you to conserve network bandwidth.

For those without telnet capability, the database may be accessed non-
interactively via mail server. Send E-mail with the word "help" to
archie@host where host is one of the Archie sites above.

The above two resources (the FTP list and the Archie server) are
extremely powerful tools for finding out "what's out there" at various
FTP sites around the world. *PLEASE* exhaust their capabilities
before posting requests to the net.

The following is a brief summary of major ham-related FTP sites and
places where you can obtain a current copy of this FAQ:

ftp.cs.buffalo.edu:/pub/ham-radio
(submissions to this ftp site should be made to
bowen@cs.buffalo.edu) - Contains many ham radio files,
including the FAQs, Elmer list, SWL and scanner info, Packet
FAQ, examination opportunities, information on various
regulations, information on commercial radios (i.e. GE or
Motorola), SSTV (slow-scan TV), HTs (handheld transceivers).
Recently, the rec.radio.amateur Working Group (rra-wg,
see below for more information about their mailing list)

has started to encourage archivers of radio modification
instructions to mirror them at this site. In this way,
maintainers may come and go but the collection of
mods will remain continuously available (and undergo
constant positive growth). This FAQ is updated monthly
here.
grivel.une.edu.au:/pub/ham-radio
Australian mirror of ftp.cs.buffalo.edu
nic.funet.fi:/pub/ham
This is one of the largest FTP sites in Europe and maybe the
most popular. /pub/ham/info contains a mirror of Buffalo.
Other topics available here include amiga, antenna, HF, packet,
satellite, scanners, program sources, VHF and others.
This site is also one of the article archives for the
rec.radio.info newsgroup.
ftp.uu.net:/networking/ka9q
A large FTP site in the USA - UUNET contains sources and
binaries for many different types of computers.
ftp.ucsd.edu:/ (site was down when we were looking for the new path)
The "home" site (with the most recent versions for the largest
number of different computer platforms) of the KA9Q TCP/IP
Network Operating System (NOS), other ham-related software,
and the archives for the Info-Hams, Packet-Radio, Ham-Policy,
Radio-Info and TCP-Group digests.
vixen.cso.uiuc.edu:/pub/ham-radio
This site contains the HyperCard Hamstacks written by Diana
Carlson as well as ASCII readable ham radio question pools.
ftp.apple.com:/pub/ham-radio
Ham software and information, especially Macintosh software
rtfm.mit.edu:/pub/usenet/news.answers/radio/ham-radio
all participating FAQs and periodic informational postings are
archived here, including those from the rec.radio.* newsgroups
which can be found in pub/usenet/news.answers/radio.
Participating FAQs are automatically archived here when they
are posted on UseNet.
ftp.amdahl.com:/pub/radio/amateur
cd pub/radio/amateur - the most up-to-date copy of the FAQ
(updated nightly when changes are made)
world.std.com
The Ham Radio archive at this site has been moved to
oak.oakland.edu.
oak.oakland.edu:/pub/hamradio
oak.oakland.edu:/pub/hamradio/arrl
Mac, Amiga, Atari, PC files in their own subdirectories.
Also radio mods and an Internet mirror of the ARRL info
server.

See also the file FTP-INFO on the ARRL e-mail server.

If you experience difficulty connecting to the above FTP sites, some
troubleshooting hints are shown below. The unfortunate situation here

is that Netnews is far more prevalent than direct Internet hookups, accurate name servers, smart mailers and routers, and of course, telnet and FTP client services. What this means is that your trouble may be caused by MANY factors.

Here's some hints to check what's wrong:
* It may very well be that your newsfeed and email are via dialup line and UUCP (Unix-to-Unix copy) in the wee hours of the morning. If this is the case, then you have no direct connection to the Internet and thus cannot use real-time interactive services like FTP and telnet.
* If you are at a college or university, your host (ie, the computer you are logged onto) may be on the Bitnet network, which has an email gateway to the Internet, but no direct connect capability.
* If you do have a direct connection to the Internet, does your host have telnet and/or FTP client programs? (ie, if you type "ftp" or "telnet" at your command prompt, do you get anything?) Many hosts, particularly IBM mainframes not running Unix, do not support these services!
* Can you telnet to other hosts and get a login prompt?
It may very well be that some hosts are "not recognized" due to misconfigured connections and inaccurate host tables/name servers (*.mil computers are *NOTORIOUS* for this!)
* If you get "host not in host table" or "host unknown" or similar error, try telnetting via the IP number, a set of four 1-3-digit numbers separated by periods (eg, 198.137.220.1). The exact IP number for the site can be obtained via the nslookup utility, if your computer supports it. (The FAQ does not print IP addresses any more because they change so often.) Your system may not recognize the "fully-qualified domain name" (like callsign.cs.buffalo.edu), but it should ALWAYS recognize an IP number if their network is reachable from yours.
* If you get "network unreachable" check with some more knowledgeable users if your site is actually connected to the Internet. If it is, a link in the network may be temporarily disconnected for maintenance (or by accident.)
* In the case of telnetting to a non-default port (as in the case with the callbook servers), if telnet <host> <port#> doesn't work, but you can telnet to the default login port (ie, no qualifiers), then the manner at which the port qualifier is entered may be system dependent. Also, at many education sites, it is common practice to block telnet connections above TCP socket 1000 or so in a somewhat misguided attempt to block usage of "recreational" TCP socket applications such as Multiple User Dungeons (MUD's) or Internet Relay Chat (IRC). In most cases, a polite word to the system administrators, pointing out the worthwhile services available on sockets 2000 and 3000 will get telnet service unblocked, at least for those ports.
* Syntax for telnetting from different operating systems differ. Some common command syntaxes are: (angle brackets are for

readability, do not type these in literally)
Berkeley Unix or VMS with Wollongong TCP/IP uses syntax:
telnet <host> <socket#>
Other possibilities to try:
telnet console <host> (for 2000 port)
telnet <CR> open <host>:<port#>
telnet <host>/<port#>
telnet <host>/port=<port#> (for Multinet on VMS)
* Compression techniques are different for different operating systems.
However, these hints should help:
foo.sit needs Macintosh UnStuffit to unstuff
foo.hqx needs Macintosh BinHex to uncompress
foo.tar needs Unix or GNU tar utility to extract archived files
foo.Z needs Unix 'uncompress' to uncompress or VMS
compress_vms.exe (on gatekeeper.dec.com) will work too.
foo.z needs the GNU gzip utility (from prep.ai.mit.edu) to
uncompress it. gzip will also uncompress *.Z files.
If more than one method was used,
like for foo.hqx.Z, start at the outside and work in (so uncompress
on Unix with 'uncompress' first, transfer to MacIntosh, then
uncompress with BinHex to get uncompressed file).
* There is an excellent introduction to FTP and archiving software
regularly posted to comp.binaries.ibm.pc and news.answers.
* If all else fails, ASK your system administrator or check system
documentation.

* Access to FTP archives via electronic mail
ANY BITNET, EARN, or NorthNET site can access the Princeton mail
server. It will be most efficient if you know the complete path
and filename for anything you wish to transfer, but you can use
'cd' and 'ls -l' commands to move about and browse the remote site's
directories. The Archie database server may also be useful to search
for files and their directory locations on FTP sites around the world
(see below). Please be patient when using non-interactive mail
servers such as BITFTP as each request may take several hours (or
longer) to be fulfilled.

For access to the FTP server, send email to bitftp@pucc.bitnet (for
BITNET, EARN and NorthNET users ONLY!). Subject doesn't matter.
The text of the email is the FTP commands one after another. For
example, suppose you wanted to access the FTP site lcs.mit.edu:
FTP lcs.mit.edu
USER anonymous
PASS yourname@yoursite (not required)
ASCII
CD telecom-archives
GET filenames
BYE
A help file is available giving detailed instructions by putting
the single word HELP into the text of the email.

For nonBITNET users, there is also a FTPMAIL server at
ftpmail@decwrl.dec.com. Commands include: REPLY <mailaddr>,
CONNECT [HOST [user [pass]]], ASCII, BINARY, COMPRESS, COMPACT,
UUENCODE, BTOA, LS <directory>, DIR <directory>, GET <file>, QUIT,
HELP. Get the help file for more information by sending mail with
the single line "help". The ftpmail site may complain if you try
try to get more than 1 file per email request. Here is an example of
a request:
reply your_name@your_site
connect vixen.cso.uiuc.edu
binary
uuencode
get pub/ham-radio/extra-pool.txt
quit

A note on the use of FTP mailservers: If you want to use FTP
mailservers, like FTPMAIL, please be considerate of any systems that
your mail must pass through. The quickest way to find yourself cut
off from the world is to make the admins of sites that pass your mail
pass 60Mb of X11 graphics system source. If you need large amounts
of information from a mailserver, contact your admin for help -- it
may already be available, or he may know a better way to get it.

* The UCSD Ham-Radio mail list: rec.radio.amateur.misc by mail
You can use rec.radio.amateur.misc even if your site has no NetNews
feed. To subscribe to rec.radio.amateur.misc, send email to:
Ham-Radio-Request@ucsd.edu
In the body of the message, write:
subscribe Ham-Radio
If your local e-mail software does not provide a valid return address
(i.e. Bitnet, many Milnet sites, and many non-Unix e-mail packages)
you can provide your return address between the "subscribe" and the
name of the mailing list (i.e. "subscribe myname@here.org Ham-Radio".)

Similarly, to subscribe to some other rec.radio.* newsgroups, use
the following directions: (all addresses here are @ucsd.edu)
Request address List address Newsgroup
Ham-Radio-Request Ham-Radio rec.radio.amateur.misc
Ham-Digital-Request Ham-Digital rec.radio.amateur.digital.misc
Ham-Policy-Request Ham-Policy rec.radio.amateur.policy
Ham-Equip-Request Ham-Equip rec.radio.amateur.equipment
Ham-Ant-Request Ham-Ant rec.radio.amateur.antenna
Ham-Homebrew-Policy Ham-Homebrew rec.radio.amateur.homebrew
Ham-Space-Request Ham-Space rec.radio.amateur.space
Radio-Info-Request Radio-Info rec.radio.info

IMPORTANT NETIQUETTE NOTE: never ever send a request to subscribe
or unsubscribe from *any* mail list to the list itself. Always use
the REQUEST address. Otherwise you'll end up broadcasting your
request to everyone on the list and getting lots of people angry at
you. (Seriously - this is a completely avoidable mistake and it
does irritate a lot of people.)

TO UNSUBSCRIBE, follow directions above, changing the command word "subscribe" to "unsubscribe"
DON'T POST TO THE NEWSGROUP ITSELF! USE THE REQUEST ADDRESS!
Help is available by using the command word "help". Note that command words MUST be the first word on each line of the message.

You can post to rec.radio.amateur.* by sending your posting email to the mail list addresses at ucsd.edu. Since rec.radio.info is a moderated newsgroup, requests to post to it may be sent to Radio-Info but they will be mailed to the moderator, rec-radio-info@ve6mgs.ampr.ab.ca, for posting.

All of the Amateur radio newsgroups are archived for FTP on ucsd.edu under subdirectory mailarchives/{mail-list-name}. However, Radio-Info is not archived at UCSD because almost everything is either on one of the other lists or in the news.answers archives at rtfm.mit.edu (see also funic.funet.fi above).

To subscribe to rec.radio.shortwave, send email to listserv@cuvma.columbia.edu, message is "subscribe swl-l (your name)"

* Telephone BBS's with Ham-related information
Among many, a large one is WB3FFV. Use 8/N/1. The phone numbers are
(410)-661-2475 1200-38400/MNP5/V32bis/V42bis
(410)-661-2598 1200-38400/MNP5/V32bis/V42bis/PEP
(410)-661-2648 1200-19200/MNP5/V42bis/PEP
Login is bbs, no password. This BBS is also available via UUCP, login is uucpanon, no password. For a list of available files, try:
uucp wb3ffv!~/FILES /usr/spool/uucppublic

Another one is N8EMR at phone 614-895-2553, login hbbs. Data settings are 8 bits, NO parity, 1 stop bit. N8EMR has a comprehensive list of other ham-related BBS's on-line.

ARRL has a BBS called "HIRAM", named after the League's founder. The number is 203-666-0578. More information can be obtained from the file ARRL-BBS on the ARRL e-mail server.

For a more complete list of Ham Radio BBS's, see the file BBS on the ARRL server. See also the file BBS_LIST.TXT on the KA6ETB HAM-server. Also see many of the FTP sites listed earlier in this section. There is now way to keep a list like this anywhere near up-to-date so giving you a lot of sources is the next-best thing!

* Callsign servers and geographical name servers
We know of online callsign servers for the USA, Canada and UK.

If you are at an Internet site you can connect using telnet to the following callbook server (covering the USA and Canada):
callsign.cs.buffalo.edu

There is also a general geographical name server at
martini.eecs.umich.edu

For the UK, you can use a WWW client to access the following URL:
http://www.mcc.ac.uk/htbin/callbook

The callbook server sits on port number 2000 and the geographical name server sits on port 3000. These are different port numbers than what telnet usually defaults to. So if you just telnet to these machines, you will get a login prompt instead of the server. How you tell your telnet program to connect to port 2000 or 3000 instead of the default port is operating system dependent but it is usually done with a line like

telnet callsign.cs.Buffalo.edu 2000

If this doesn't work, check the telnet/FTP troubleshooting hints above or consult your local systems guru for the proper command string.

The interactive servers are designed to be somewhat self-explanatory and they support fairly detailed help facilities. The first command you should execute when connecting to one of these servers is "info". This will list general info about that server and how to use it. You should then type "help" to list the various commands available. Typing "help" followed by a command name will give you a little more detail about that command. Servers allow searches by call, last name, zip code or city and also provide regular expression filters to trim your searches so you get a reasonable amount of output.

Both these servers are built from a database distributed by Rusty Carruth, N7IKQ. This database currently contains US and Canadian callsigns and it does not contain club calls. A new version of the database is sent around approximately once a year.

There is also an email callsign server at callbook@sat.datapoint.com (The UUCP address is ...!uunet!dptspd!callbook). In the body of the text, say "lookup" followed by callsigns you want to look up. If your mailer appends signature files, you should put a line "quit" at the end of your request (before the signature file). If you want help, put the word "help" on a line by itself. Here is what a request might look like:

```
help
lookup kc1sp wn4bbj
lookup n0fzd
quit
```

There is another email callsign server at callbook@n8emr.cmhnet.org. The subject line is the list of callsigns to lookup. All other lines are ignored. This same callsign server can be accessed with packet radio via cbook@n8jyv.#cmh.oh.usa.na. The body of the message should include "REPLY n8jyv!HOME_BBS!CALL" (where HOME_BBS is YOUR home BBS, and CALL is YOUR callsign), carriage return, "CALL call1 call2 ..." (where call1 call2 .... is space separated list of callsigns you want to lookup).

If you are a packet radio station, callserver data is available from REQQTH@WA4ONG.VA.USA.NA, subject line should be up to 5 US callsigns,

separated by spaces. For Canadian calls, use the callserver at
REQQTH@VE3JF.ON.CAN. Body of message is ignored. The server is an
OS interface to the MBL packet BBS using the Buckmaster CD-ROM
callsign database.

The FCC "call sign hotline" at 717-337-1212 is available for those
who wish to listen to the call signs allocated in each group for each
district. This requires only a touch-tone telephone to use.

* FTP access to FCC Part 97 and FCC Amateur Radio question pools
Part 97 is part of the FCC regulations and only applies to the USA.
As of 1/94, a current copy can be found at ftp.cs.buffalo.edu in
the /pub/ham-radio directory.

An ASCII copy of the question pools are available by ftp from
the ARRL e-mail server.

* Lists of radio modifications and extensions
[see also rec.radio.amateur.equipment]
The largest collection of mods data that we know about is kept at
ftp.cs.buffalo.edu in the /pub/ham-radio/mods directory. The
maintainer of this archive strongly encourages all existing
archivers of mods to mirror their collections on this site.
in this way, maintainers will come and go, but the collection
of mods will remain stable and accessible.

There is a packet radio Mods Server. To get the directories, send
a packet as follows:
SP REQFIL@N2IMC.NJ.USA.NA
Subject: MODS\Dir.1
/EX
To get the mod, send to same place, with Subject MODS\Filename.ext.

REMEMBER that any modification is likely to void your warranty and
that these mods are NOT guaranteed to work. This list is supplied
here because it is a frequently-asked question on the newsgroup.

** Can I send ARRL or W5YI electronic mail?
Several ARRL HQ staffers can be contacted via the net. Their e-mail
addresses are available from the ARRL e-mail file server in the
file called "EMAIL".

ARRL requests that you include your postal address (the slow kind) in
case they need to send you nonelectronic material in answer to your
request.

W5YI, a large VEC, can be reached at the following address:
Fred Maia, W5YI 3511297@mcimail.com

** "Why doesn't the ARRL do...?"
If you want the ARRL to do something, tell them! Direct input from a
concerned member (or, actually, any concerned Ham) carries a lot more
weight than hearsay from any source. Their e-mail addresses are

available from the ARRL e-mail file server (see above). They want direct input - that's why those addresses are available.

** What magazines are available for Ham Radio?
Your local ham store may have some, but here's some popular ones (this is NOT a complete list!):
QST, ARRL, 225 Main St, Newington, CT 06111 - basic projects and contesting
CQ The Radio Amateur's Journal, 76 North Broadway, Hicksville, NY 11801 - beginner ham radio articles
73 Amateur Radio Today, WGE Center, Forect Rd, Hancock, NH 03449, FAX (603) 525-4423, email: COMPUSERVE 70310,775 or Internet 70310.775@compuserve.com - more technical ham radio articles
QEX, ARRL, 225 Main St, Newington, CT 06111 - more technical projects
WorldRadio, 2120 28th St, Sacramento, CA 95818, (916) 457-3655. Subscriptions to 201 Lathrop Way, Ste D, Sacramento, CA 95815, (800) 365-SUBS - lots of special interest columns, like QRP, ATV, YL, etc.
W5YI Report, PO Box 565101, Dallas, TX 75356, 1-800-669-9594 - up-to-date information on Amateur Radio happenings, including VE information and statistics

** How do I use the incoming and outgoing QSL bureau?
To use the outgoing QSL bureau, you must be a member of ARRL. In general, you send a bundle of foreign (not States!) QSL cards to the outgoing bureau in Newington, Connecticut, along with a label off of your QST magazine (which shows ARRL membership), along with $2 per pound of cards (approximately 150 cards) or $1 for 10 cards or less.

To use the incoming QSL bureau, you do NOT have to be a member of ARRL. Send one or more Self-Addressed Stamped Envelopes (size 5x7 or 6x9, NO BIGGER, NO SMALLER) with one ounce of postage attached and with your callsign in 3/4" letters in top left hand corner where the return address label would go. If you expect a large quantity of foreign QSL cards, attach extra money or postage with a paper clip; do NOT affix extra postage to envelope. Send the envelopes to the QSL bureau for your callsign area. If your callsign is xx3xxx/5, you would send it to the 3rd call area, NOT the 5th call area. Addresses for QSL bureaus are listed in QST and on the ARRL e-mail server (see below); if you don't have access to a QST magazine, ask another ham. IMPORTANT: BE PATIENT! Turnaround time for a US QSL bureau, not considering foreign QSL bureaus, is about 3 months. Foreign QSL bureaus and hams can be as fast as 2 months or as slow as TEN YEARS, while average is about 6-12 months.

Addresses for the US incoming and outgoing QSL Bureaus are available from the ARRL e-mail server in the files called "QSL-IN" and "QSL-OUT". See the question above

** Are there any news groups for CAP?
There is no news group just for Civil Air Patrol discussions. However,

rec.aviation.misc is appropriate for CAP aviation discussions and for CAP radio information, these rec.radio.amateur.* groups are available. CAP-related files are also stored on the FTP site sunburn.cps.udayton.edu in pub/capital.

** What's the name of the QRP club that issues QRP numbers?
QRP Amateur Radio Club International, c/o Bill Harding K4AHK, 10923 Carters Oak Way, Burke, VA 22015.

See also the file QRP-ADDRESSES on the ARRL e-mail server.

** How do I become a 10-10 member?
10-10 is simply an organization to sponsor the use of the 10 meter band. It was first conceived when propagation was poor on 10 meters, as a method to get more hams to use 10 meters. The past few years have been great for 10 meters worldwide. However, "the bands are closing down" again, and 10 meters will once again be limited more for local communications, except for sporadic band openings, until the next sunspot cycle.

To join 10-10, work ten 10-10 members and LOG each 10-10 number, call sign, operator's name and location. Send the list to your numeric call sign or DX area manager (as shown below), with $5.00 U.S. new membership registration fee ($6.00 for foreign addresses).

10-10 International Area Managers:
USA 1 - Al Kaiser N1API, 194 Glen Hills Rd, Meriden, CT 06450
USA 2 - Larry Berger WA2SUH, 9 Nancy Blvd, Merrick, NY 11566
USA 3 - Chester Gardner N3GZE, 9028 Overhill Dr, Ellicott Cty,MD 21042
USA 4 - KY, TN, FL, VA, NC, SC only
Rick Roberts N4KCC, 7106 Ridgestone Dr,Ooltewah, TN 37363
USA 4 - GA, AL, Puerto Rico only
Jim Beswick W4YHF, 112 Owl Town Farm, Ellijay, GA 30540
USA 5 - Grace Dunlap K5MRU,* Box 445, LaFeria, TX 78559
*summer addr Jun-Oct Box 13, Rand, CO 80473
USA 6 - Dick Rauschler W6ANK, 4371 Cambria St, Fremont, CA 94538
USA 7 - Willie Madison WB7VZI, 10512 W Butler Dr, Peoria, AZ 85345
USA 8 - John Hugentober N8FU, 4441 Andreas Ave, Cincinatti, OH 45211
USA 9 - Jim Williams N9HHU, 240 Park Rd, Creve Coeur, IL 61611
USA 0 - Debbie Peterson KF0NV, RR 1 Box 35, Duncombe, IA 50532
All DX- Carol Hugentober K8DHK,4441 Andreas Ave, Cincinatti, OH 45211

For more info, see the file 10-10-INFO on the ARRL e-mail server.

** How do I join MARS?
To join MARS, you have to be 14 years or older (parental consent required under age 17), be a US citizen or resident alien, possess a valid Amateur Radio license, possess a station capable of operating on MARS HF frequencies, and be able to operate the minimum amount of time for each quarter (12 hours for Army and Air Force; 18 hours for Navy-Marines). Novices must upgrade to Technician within 6 months, else be dropped from MARS. No-Code Techs can apply, provided

they have transmit and receive HF capability for MARS frequencies (they don't need transmit capability for Amateur HF frequencies). For application forms contact:

Chief, Air Force MARS
HQ AFC4A/SYXR
203 W. Losey St. Room 1020
Scott AFB, IL 62225-5219
(618)256-5552 Fax: (618) 256-5126

Chief, US Army MARS
HQ USA Information Systems Command
ATTN: ASOP-HF

800-633-1128

Chief, Navy-Marine Corps MARS
Naval Communication Unit
Washington, DC 20397-5161

** How do I join RACES?
Contact your nearest Civil Defense or Emergency Management Agency. The Radio Amateur Civil Emergency Service is a part of a municipal, county, or state government. This does not mean, however, that every such government has a RACES program. If your government does not have a RACES, ask them to refer you to the nearest jurisdiction that does have a RACES program.

** What organizations are available to help handicapped hams?
Courage Center
Handihams
2915 Golden Valley Rd
Golden Valley, MN 55422
(612) 520-0515
ARRL has a Handihams information package (get it by requesting it through 2155052@mcimail.com) and a book called "The ARRL Plan for the Disabled", available at no charge from the ARRL Regulatory Information Branch.

** I am looking for a specific ham, can anyone help me find him?
Rather than sending out a message on Usenet, you might first try the "Radio Amateurs on Usenet" listings, maintained and posted by Mark Salyzyn VE6MGS. The articles can be found monthly on rec.radio.info and rec.radio.amateur.misc. If the copy in your news spool has expired for some reason, you can look up an entry in the list by sending an e-mail to reqnet@ve6mgs.ampr.ab.ca with either of the following commands in the body of the message:
lookup keyword keyword keyword ...
return user@machine.subdomain.domain
(Fill in the proper info for the search keyword or e-mail address.)
An automated server program will reply to your message.

If you have his/her callsign or name, you should also try one of the on-line callservers shown above. This works in most cases. (!!!)

Also try directory assistance from the phone company or the locator service provided by the Salvation Army. A Salvation Army post in your local area may be able to help you. Also, the Quarter-Century Wireless Assn maintains a collection of callbooks going back to "the beginning of time". Their address is: 1409 Cooper Drive, Irving, TX 75061. Also, the Callbook has a dial-in line for accessing new ham callsigns. Try (1-708-234-8011) at 2400 baud.

** Can I post my neat new ham related program on rec.radio.amateur.misc?
This is really not a good idea, since many of the readers receive these newsgroups as mail digests. Posting is also a one-shot thing. If you post and someone missed it, it is gone. A better way would be to announce the existence of your program here, along with information on how to obtain a copy of your program. You can also submit it to one of the FTP archive sites, which will allow the world to access it without you having to mail it to each requestor. If you just GOTTA post it somewhere, post it to more appropriate groups, like comp.sources.unix or alt.sources or comp.binaries.ibm.pc.

** Where can I get ham radio software for my computer?
See the information about Anonymous FTP, e-mail servers, and ham-related telephone BBS's above. For PC-clones, see the KA6ETB HAM-server. For Macintosh computers, see the file SOFTWARE-MAC on the ARRL e-mail server for locations to look.

** Are there Dialup News services or BBSs for Amateur Radio?
There are two major news services for ham radio. Both are run by volunteer hams and provide bulletins of specific interest to amateurs, hence they are perfectly legal to rebroadcast on ham bands according to FCC Regulation 97.111B(6). To lessen the load on the dialup lines, consider getting your local repeater operator to rebroadcast it, or tape record it to play at your favorite HF net.

RAIN (Radio Amateur Information Network) is produced by Hap Holly, KC9RP, located in Illinois. The news is typically updated 8am CST Fridays. Phone numbers are 1-708-299-INFO (299-4636) and 1-708-827-RAIN (827-7246).

NEWSLINE is another, produced by Bill Pasternak, WA6ITF. Donations for NEWSLINE are accepted at Newsline Support Fund, c/o Dr. Norm Chalfin K6PGX, Pasadena, CA 91102. Phone numbers are:
Chicago 1-708-289-0423
N.Florida 1-407-259-4479
West Palm Beach 1-407-965-1234
Los Angeles 1-805-296-2407 (Instant Update Line)
Los Angeles 1-213-462-0008
NYC 1-718-353-2801
Ohio 1-513-275-9991
Seattle 1-206-368-3969

** Where can I find VE sessions in my local area?
VE sessions are often announced in the local newspapers, but more
often, they are announced by local radio bulletin boards. The
local packet BBS will most likely have a monthly updated schedule
for VE sessions. ARRL or W5YI can generally be called and asked for
local VE sessions as well. Don't forget that you will need the
following when you go in for an upgrade: a copy of your current
Amateur license; your original Amateur license; any CSCEs (duplicate
not required), if applicable and less than a year old; a picture ID,
preferably a driver's license, passport or visa; and the VE test
fee (approximately $5 right now).

Bart Jahnke, KB9NM, the ARRL VEC Manager (bjahnke@arrl.org) posts a
listing of VE exams indexed by state (and some overseas sites, usually
at embassies and military bases) to the net every 6 weeks or so. The
same list can be obtained from the ARRL e-mail server under the file
EXAM-SCHEDULE. Another file of interest is EXAM-INFO.

The ARRL list is the definitive list for ARRL VEC sessions. There
are other smaller VECs around the USA. ARRL includes their schedules
when the info is available. The other VECs phone numbers are listed
with the ARRL info so you may wish to give them a call to check their
schedule if they didn't provide it to ARRL.

** Why isn't XXX available electronically?
This is a theme for a lot of common questions. For the "XXX" above,
substitute any of the following:
Callbooks
DX QSL Lists
Radio station lists
various publications
and more...

Except for the Callbook (via callsign servers), these are not available
because of any of several reasons. Either there are copyright restric-
tions, royalty fees, or the source just may not have done the work.
Also, not everyone that has information has reliable UseNet access.

** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start?
This FAQ would not be complete without a reminder that useful
resources on the net do not grow on trees, they are the work of
many dedicated volunteers. The rec.radio.amateur.* newsgroups
are very fortunate to have quite a number of such volunteers
providing everything from FAQ lists to telnettable callsign
servers. This doesn't mean, however, that there isn't room for
more information and services from additional volunteers. One
such service would be more detailed FAQ lists for the recently-
-created special-interest rec.radio.amateur.* newsgroups (such
as those for antennas, homebrew electronics, equipment and
ham radio in space) to supplement this general FAQ.

Recently an electronic mailing list for amateur radio FAQ maintainers, archive custodians, service providers, and other volunteers was set up. It is the rec.radio.amateur.* Working Group (rra-wg). Anyone with a sincere interest is welcome to subscribe by sending E-mail to rra-wg-request@amdahl.com. The readers of that forum would be more than happy to provide advice and guidance with regard to an existing information project, or even suggest a new one to fill a currently-unmet need.

3807. rec.radio.amateur.misc Frequently Asked Questions (Part 3 of 3)

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-08 06:38:28 UTC

Rec.radio.amateur.misc Frequently Asked Questions
Part 3 - Amateur Radio Advanced and Technical Questions
------------------------------------------------------------------------------

Questions discussed in Part 3: (dates indicate last modification)
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (10/94)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** On what frequencies do JPL and GSFC retransmit the shuttle audio?
(10/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 3--

** What are the different US amateur classes and what can each of them do?
Novice - has CW (Morse code) privileges on 4 HF bands (80, 40, 15,
and 10 meter), Voice privileges on 10 meters, and privileges
on 2 VHF/UHF bands (220 MHz and 1290 MHz).
Required are 5 wpm Morse code test and 30-question Novice test.
```

Technician - has full privileges on all VHF/UHF bands above 30 MHz.
Required are Novice test and 25-question Tech test.
Technician may access Novice HF bands by passing the 5 wpm Morse
code test.
General - has all Technician privileges, plus larger access to more
HF bands, including CW and Voice on 160, 80, 40, 30, 20, 17, 15,
12, and 10 meter bands. A General class amateur can give Novice
tests.
Required are 13 wpm Morse code test, Novice, Tech and 25-question
General test.
Advanced - has all General privileges, plus wider band access on 80,
40, 20, and 15 meter bands. An Advanced class amateur can
also become a VE and give tests to Novice and Tech tests.
Required are 13 wpm Morse code test, Novice, Tech, General and
50-question Advanced test. The Advanced test is the most difficult
of the five written tests.
Amateur Extra - has full privileges on all amateur bands. An Extra
can become a VE and give all amateur tests.
Required are 20 wpm Morse code test, Novice, Tech, General,
Advanced and 40-question Extra test.

** What is the best way to learn Morse Code?
This is becoming an increasingly common question as many "no-code"
Technicians realize they can add more privileges to their license if
they learn Morse Code. The following list of suggestions should
be helpful in finding ways to approach the effort.

* Listen to code at a rate faster than you can copy.
* Participate in Novice-Roundup and/or Field Day. Practice whenever
you get the chance!
* Avoid the "deciphering" plateau around 5 WPM and and character
plateau at 10 WPM by listening to the fast Farnsworth-paced
"beat" of each letter and the "beat" of common words. (See the
question on Morse code speed for more information on Farnsworth
pacing.)
* Practice to develop a "copy buffer" so you copy about 5 characters
behind. (This is not easy but it's how the higher speeds are done.)
* Practice both with headphones and "open-air" copy as the code test
may be in either format. (If you only practice one, you may fumble
on the other.)
* Most of all, don't give up! Recognize when you reach plateaus
and keep trying until you break through them.

** What is the standard for measuring Morse code speed?
The word PARIS was chosen as the standard length for CW code speed.
Each dit counts for one count, each dash counts for three counts,
intra-character spacing is one count, inter-character spacing is three
counts and inter-word spacing is seven counts, so the word PARIS is
exactly 50 counts:

```
PPPPPPPPPPPPP AAAAA RRRRRRRRR IIIII SSSSSSSSS
. - - . . - . - . . . . . .
1 1 3 1 3 1 1 3 1 1 3 3 1 1 3 1 1 3 1 1 1 3 1 1 1 1 1 7 = 50
^ ^ ^
^Intra-character ^Inter-character Inter-word^
```

So 5 words-per-minute = 250 counts-per-minute / 50 counts-per-word or one count every 240 milliseconds. 13 words-per-minute is one count every ~92.3 milliseconds. This method of sending code is sometimes called "Slow Code", because at 5 wpm it sounds VERY SLOW.

The "Farnsworth" method is accomplished by sending the dits and dashes and intra-character spacing at a higher speed, then increasing the inter-character and inter-word spacing to slow the sending speed down to the desired speed. For example, to send at 5 wpm with 13 wpm characters in Farnsworth method, the dits and intra-character spacing would be 92.3 milliseconds, the dash would be 276.9 milliseconds, the inter-character spacing would be 1.443 seconds and inter-word spacing would be 3.367 seconds.

** What is the standard phonetic alphabet?
Though no standard phonetics are required on amateur radio, good operating procedures include using the standard phonetic alphabet to help communicate more clearly. The recommended phonetics are those also in use by aviation (internationally by ICAO treaty) and some militaries (in most English-speaking countries.)
alfa bravo charlie delta echo foxtrot golf hotel india juliet kilo lima mike november oscar papa quebec romeo sierra tango uniform victor whiskey x-ray yankee zulu

The numbers are spelled differently to suggest a particular pronunciation. Also, nine was changed to "niner" to avoid confusion with the German word "nein" for "no", though that change is not commonly used by Hams. (Usually you'll only hear "niner" from Hams who are also pilots.)
zero one two tree fower fife six seven eight niner

When first making contact with another Ham, it is a good idea to say callsigns in phonetics to give the other side a better chance of understanding them correctly.

See also: http://aviation.jsc.nasa.gov/alphabet.html

** I'm confused. What do all those abbreviations mean???
AM Amplitude Modulation
AMSAT Amateur Satellite Corporation [see rec.radio.amateur.space]
AMTOR Amateur Teleprinter Over Radio. A more sophisticated version of RTTY. Also used commercially as SITOR (Simplex Teleprinter Over Radio). [see rec.radio.amateur.digital.misc]
ARRL American Radio Relay League
ATV Amateur Television - a way to see who you're talking to!
CAP Civil Air Patrol is a volunteer organization that searches for downed aircraft and missing kids and uses frequencies just

outside of the ham bands and often uses modified Amateur radios
CB Citizen's Band radio, this is NOT part of Amateur Radio and
does not require any license to operate [see rec.radio.cb]
CQ An on-the-air request for a conversation with anyone
"dupes" A dupe sheet is a duplicate check sheet, in matrix format, used
to quickly check that you have not had a "duplicate" contact
with someone (on a specific band or mode) in a contest
Elmer An amateur radio mentor, or "Master Craftsman" to a new ham.
Could refer to anyone, regardless of age or gender.
FCC Federal Communications Commission, the "law enforcers"
FM Frequency Modulation
FieldDay A June activity to practice emergency communications for
24 hours....wives call it 'an exercise in male bonding' :-).
HF High Frequency - 3 MHz to 30 MHz
HT Handy-Talky, a shorthand for "hand held radio"
LF Low Frequency - 30 kHz to 3 MHz
MARS Military Affiliate Radio System, military affiliated Amateurs
who provide free communications for overseas GIs and other
Federal services. MARS operators are licensed under DoD
instead of FCC.
NTS National Traffic System, a way to send radiograms
OF Old Friend, or Old F#$%, used to denote an older ham
OM Old Man, refers to any ham, including female hams
packet computer bulletin boards/electronic mail via Amateur Radio
[see rec.radio.amateur.digital.misc]
PRB Private Radio Bureau, administers Amateur and CB services
QSO One of the Q signals used in Morse code to mean "conversation"
QCWA Quarter Century Wireless Association, membership means you've
been a ham for more than 25 years
RTTY Radio Teletype - older form of computer communications on HF
[see rec.radio.amateur.digital.misc]
SAREX In Amateur Radio talk, Shuttle Amateur Radio EXperiment, a
chance to talk to astronauts in space. In CAP talk, Search
and Rescue EXercise, practicing for the real thing.
[see rec.radio.amateur.space]
SK Silent Key, a nice polite way to say a ham has passed on "to
that great antenna farm in the sky"
SSB Single Side Band - need less band width than AM or FM
SSTV Slow Scan TeleVision - REALLY slow, low data rate, typically
used on the lower frequency bands
SWL shortwave listening [see rec.radio.shortwave]
UHF Ultra High Frequency - 300 MHz and above
ULF Ultra Low Frequency - 30 Hz to 300 Hz
VHF Very High Frequency - 30 MHz to 300 MHz
VLF Very Low Frequency - 300 Hz to 30 kHz, audio frequencies
WARC World Administrative Radio Conference, a summit meeting that
occurs every few years, required by international treaty to
determine how the spectrum get sliced up to all vying
communications services (last one was in 1992)
XYL eX-Young Lady, or wife

YL Young Lady, non-ham girlfriend or female ham
2m Shorthand for "2 meters" (144-147.995 MHz), which is a reference to the wavelength of a common Amateur frequency band used for local communications

** What do all those "tones" mean?
Sub-Audible Tone: A low tone that you're not supposed to be able to hear. It's used as a "PL Tone." PL is "Private Line", a trademark of Motorola for their implementation of CTCSS (Continuous Tone Coded Squelch System). Basically, the transmitter sends the signal with the Sub-Audible tone and the receiver only opens when it hears signals with that tone. Signals without the proper tone are ignored. This is useful for "closed" repeaters, or for repeaters on the same frequency that have overlapping geographic areas.
Tone encode refers to the feature of providing the tone on transmit.
Tone decode refers to the feature of responding to the tone on receive.
Tone squelch refers to all of the above. DTMF refers to Dual Tone Multi-Frequency, or "Touch Tone" which is a trademark of AT&T. DTSS probably means Dual Tone Squelch System and refers to the feature of providing a predefined sequence of Touch Tone digits to open the repeater for transmit. DTSS is an alternate method from CTCSS, which provides a way to use a "closed" repeater even if your radio doesn't do Sub-Audible Tones.

** Where can I learn more about Amateur Radio if I live outside the US?
First, check if there is a Ham Radio-related newsgroup specific to your country. See the country-specific newsgroups in "the rec.radio.* newsgroups" in Part II of this FAQ.

Also, write to the ARRL and ask. They can usually tell you how to get a license in your country. See also the ARRL e-mail server. (Details are in Part 2.)

If you know of any location where this information is available electronically, whether by an e-mail server, anonymous FTP, or a contact person, please mail it to us so we can include it here. Send it to hamradio-faq@amdahl.com.

** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)?
Editor's note (11/92): the regulations affecting this question are being changed. Contact your local Volunteer Examiner (VE) and ask about a VE 60-day pass. More details will be included in future revisions of the FAQ.

This paragraph is soon to be obsolete:

You need to submit a FCC Form 610-A to the FCC, PO Box 1020, Gettysburg, PA 17326. They will then send you a reciprocal permit for alien amateur licensee (FCC Form 610-AL). You must be a citizen of a country with which the United States has arrangements to grant

reciprocal operating permits to visiting alien Amateur operators.

This information is still current:

For FCC licensed hams operating abroad, the following guidelines
apply:
* A reciprocal license is required in all foreign countries (that have
a reciprocal operating agreement with the US), except Canada, where
the FCC license is automatically valid.
* Send a SASE to ARRL Regulatory Information Branch, telling them
which country you are going to visit and they will send you the
info and an application form. Foreign hams can likewise request
information from their national Amateur radio society.
* Submit your application with a certified copy of your Amateur
license (ie, notarized copy), and fee if applicable (use a bank draft
of a bank that does business in that country) to the appropriate
licensing administration of the foreign country. Processing may
take 30 to 90 days.
* If less than one month, you could try sending the application and
pick up the permit upon arrival in that country.
* Most countries will not allow you to bring communications equipment
into their country without a license or permit. If you applied, but
haven't received the permit yet, show the copy and your FCC license
to the customs officer, however, the equipment may still be held at
customs until your departure.
* Be sure to use only those frequencies covered by your FCC license
which are also used in the foreign country, unless otherwise
authorized.

See also the file RECIP-OP on the ARRL e-mail server. (See Part 2.)

** My apartment or housing complex does not allow outdoor antennas, now what
do I do?
[see also rec.radio.amateur.antenna]
First of all, don't despair. Many hams have similar problems. Many
books offer advice for the growing group of hams that cannot put up
antennas. Some options are:
* Install an "invisible" antenna made of magnet wire.
* Disguise an antenna as a flag pole.
* Install an antenna in the attic.
* ASK the apartment manager. You may find they will let you put up
something as long as it "is invisible" or "doesn't disturb your
neighbors" or "doesn't attract lightning".
* Operate primarily from your car.
* If the restriction is due to local ordinance, you may have relief
via PRB-1. Meet with the local government and seek an informal
compromise. It is possible to win in court...but it's expensive and
time consuming.
* If you are restricted by "covenants" attached to the deed of your
home, your options are severely limited. Covenants are considered
to be private, voluntary contracts between individuals and are

outside of the intended application of PRB-1. In many cases, you
can petition the Homeowner's Association for an exception. Sometimes
you can win in court on the basis that other violations of the
covenants by others without action taken constitutes abandonment
of the agreement.
* For further information, contact the General Consel's office of the
ARRL, 225 Main St, Newington, CT 06111.

See also the file ANTS-INDOOR on the ARRL e-mail server.

** I got TVI...HELP!!!
Here's some hints on Television interference, but this is not a
complete list. There are also books on the subject available from
ARRL.
* If cable TV is an underground feed, look for central distribution
box. Check for a grounding rod.
* Try installing torroids on the cable TV cable close to the TV, and
maybe torroids on the AC cord as well.
* VCRs are notorious for RF leakers, try disconnecting the VCR.
* Check to see if interference is better or worse when cable is
disconnected and you use rabbit ears instead. It could be the
cable company's problem!
* Calling the cable company may get results, since they are also
responsible for RF leakage from their equipment. However, they
are very often obstinate. Good luck! Try some or all of these
suggestions before calling the cable company:
1. Log the interference, noting geographical location, frequency,
and characteristics.
2. Bring it to the cable company's attention in writing, preferably
addressed to "Chief Engineer", or "Technical Staff".
3. Don't be accusatory, instead ask for assistance in resolving
the problem. Try to work it out with someone technically
knowledgeable.
4. Do mention your "licensed radio system", but try not to be too
specific about "ham" or "CB" unless requested.
* Try moving the radio antenna further away from the TV sets. Make
sure the SWR is LOW.

See also the series of files on the ARRL e-mail server on various
aspects of electromagnetic interference. The filenames start with
"EMI-" like EMI-CATVI (cable TV), EMI-GEN (general notes on EMI),
EMI-AUDIO (interference to audio devices), etc.

** On what frequencies do JPL and GSFC retransmit the shuttle audio?
[see also rec.radio.amateur.space]
Station VHF 10m 15m 20m 40m 80m Video
WA3NAN 147.45 28.650 21.395 14.295 7.185 3.860
W6VIO 224.04 21.280 14.282 7.165
K6MF 145.585 7.165 3.840
W5RRR 146.64 28.495 21.350 14.280 7.227 3.850
W6FXN (temporarily out of service - looking for new frequency)

KA9SZX 146.88 426.25
K4GCC 146.94
WA4VME 145.17
W6TRW 145.32

All frequencies are in MHz. Use FM on VHF, USB on 10-20m, LSB on
40-80m.
WA3NAN - NASA Goddard Space Flight Center (GSFC), Greenbelt, MD
W6VIO - NASA Jet Propulsion Laboratory (JPL), Pasadena, CA
K6MF - NASA Ames Research Center (ARC), Moffett Field, CA
W5RRR - NASA Johnson Space Center, Houston, TX
W6FXN - Los Angeles, CA
KA9SZX - Champaign-Urbana, IL
K4GCC - Titusville, FL (near or at Kennedy Space Center)
WA4VME - Melbourne, FL (near or at Kennedy Space Center)
W6TRW - TRW ARC, Redondo Beach, CA (shuttle audio may be overridden
by repeater usage)

** Can I take my HT on an airplane and operate it if I get the permission
of the captain?
Technically, maybe. But don't count on it. In general, you can't use
a radio or scanner on an airline (or charter) *unless* the airline
allows it and the pilot-in-command (PIC) determines that it will not
interfere with the instruments and radios on that specific aircraft.
Very few US airlines allow passengers to use radios so be ready to
disconnect the antenna when you ask. (Don't even ask to transmit.)
For reference (in the US) the pertinent portion of the Federal Aviation
Regulations (FARs) is Part 91, paragraph 91.21.

Due to airport security, you may have a little difficulty carrying the
HT (or any electronic equipment) onto the airplane. Generally, you
can appease the security guards, simply by showing that the unit is
operational and doesn't have a bomb inside. For a radio, just turning
it on and opening the squelch satisfies them. Expect more difficulty
during periods of increased security.

On a private airplane, it is legal to operate an amateur radio if you
have the permission of the PIC. It is still possible for the radio to
interfere with the plane's navigation or communication equipment, so
be sure to ask first. Always obey the requests of the PIC. He knows
his airplane and radios better than you do.

** How do I modify my current Amateur license?
To modify your license (change of address, change of station location,
change of name, renewal, or even change of callsign), submit an FCC
Form 610 to the FCC. Forms are available from the FCC or ARRL or a
local VE session or ham radio store. Do NOT use a photocopy. Check
off the appropriate boxes, fill in the new/changed information, SIGN
THE FORM, and attach a copy of your current license (or a brief letter
of explanation for its absence, ie, "my dog ate it"). NOTE: If you
check the box to change your callsign, YOU WILL GET A NEW CALLSIGN,
even if all you wanted was to supply a new address; if you want to keep

your callsign, DON'T CHECK THAT BOX. Send the form to FCC, POB 1020, Gettysburg, PA 17326. Turnaround time (for CURRENT licensees only) is about 2-4 weeks.

ANY ham can apply for a new callsign (this is different from the past where you can only get a new callsign if you move or upgrade). You can't specify WHICH ONE you want, a new one comes from the same pool as new licensees for that class of license. The callsign is based on your mailing address. For overseas military and civilians, be sure to specify a station location that is within FCC jurisdiction.

New licenses are for 10-year terms. If you apply for renewal before its expiration date, the expired license is valid for 60 days after expiration to allow for the new license to arrive. You have up to 2 years after expiration (5 years for an old 5-year license) to renew before re-examination is required (but you can't operate with an expired license). You will lose your current callsign after 1 year after expiration if you don't renew.

For more information on FCC Form 610, see the file FCC-610-INFO on the ARRL e-mail server. (See Part 2 for details.)

** I'm confused about XXX, should I ask the FCC?
[see also rec.radio.amateur.policy]
Whatever "XXX" is in this case, the overwhelming ARRL and net opinion is a resounding "NO!", at least not as a first step. Amateurs are generally very law-abiding people and have historically written the FCC asking for clarification on some operating practice or another. This is a very dangerous practice, for several reasons.

Most amateur radio regulations (contained in Part 97) are generally very loosely-worded, so as not to restrict experimentation and new techniques. But asking the FCC for a clarification will set in motion the process of "clarifying" it for everyone (i.e. new rulemaking.)

Examples of such restrictive rulings include varying topics like when Hams can help non-profit agencies or effectively forcing packet BBS sysops to screen messages before forwarding them. They were the result of well-intentioned questions by Hams that forced the FCC to make a ruling where they previously allowed the amateur radio community to police itself.

Under all circumstances, it is better to first read the rules yourself. Then, if there's a problem, ask your national amateur radio organization (such as the ARRL in the US) which can give qualified advice about interpretation of FCC regulations. Organizations like the ARRL also have the influence to ask the FCC informally, without forcing a ruling.

Even if asking the FCC doesn't result in a restrictive ruling, it is generally a good idea to not overburden an under-staffed and under-funded government agency with a lot of correspondence. The Amateur Radio Service has traditionally been a low-workload "hands-off" service, and has enjoyed a wide latitude from the FCC. Please don't

ruin this image for your fellow amateurs.

For more discussion on how and when to contact the FCC, see the file FCC-CONTACTING on the ARRL e-mail server. (See Part 2 for details.)

** Is there any information on antique radios?
Antique radio classifieds: ARC, PO Box 802-B6, Carlisle, MA 01741 - old radios, TVs, ham equipment, 40s and 50s radios, telegraph, books, etc.

See also the file VACUUM-TUBES on the ARRL e-mail server. (See Part 2)

** What do I need to get started in packet radio?
[see also rec.radio.amateur.digital.misc]
Packet radio is a digital form of communication using radios. There are OTHER digital forms, as well, like CW, RTTY and AMTOR. To use packet radio, you'll need a radio (2 meters and 70 centimeters are most popular), a box that converts radio signals to digital signals that a computer can understand (called a TNC or terminal node controller) and a computer or terminal. For some computers or TNCs you may need special software as well. However, most TNCs and computers get along quite well with just a terminal emulator software package. Most personal computers can be interfaced to use with packet radio. Since there are many digipeaters, generally even an HT will work with packet radio.

Your first source of information on Packet Radio should be the rec.radio.amateur.digital.misc newsgroup. It has its own regularly-posted FAQ that goes into much more depth on the subject than this one can. See also the mailing list and archives info in Part 2.

For more information on packet radio, you might try TAPR (Tucson Amateur Packet Radio), PO Box 12925, Tucson, AZ 85732 (602-749-9479).

See also the files PACKET-INTRO, PACKET-NEW, and PACKET-GLOSSARY on the ARRL e-mail server or the directory /hamradio/packet on the KA6ETB e-mail HAM-server. (See Part 2.)

** What do I need to get started in satellite communications?
[see also rec.radio.amateur.space]
For more information about Amateur Satellite Communications, try

AMSAT (Radio Amateur Satellite Corporation), PO Box 27, Washington, DC 20044 (301-589-6062). They also have an international net on Sundays on 14.282 MHz at 1900Z.

ARRL publishes a book on this subject: The Satellite Experimenter's Handbook. Ham Radio stores in your area may either have it or be able to order it. Or you can order it direct from ARRL.

See also the contents of the directory /hamradio/satelite on the KA6ETB e-mail HAM-server. The ARRL e-mail server has a bibliography on satellite materials in the file SATELLITES-B.

** What is available to get started in ATV, SSTV and WEFAX?
This is a large subject area in itself. Amateur Television (ATV), Slow-scan TV (SSTV), and Weather FAX (WEFAX) all deal with transmitted pictures. (ATV includes moving pictures and audio just like your household TV.)

Equipment is available to interface to most common microcomputers including PC clones, Amigas (which are prominent in most video applications anyway), Atari ST, and others. (At last check, we didn't see Macintosh on the list.) There are also a handful of publications on the subject.

All this information is available via FTP in the /pub/ham-radio directory at ftp.cs.buffalo.edu. (See Part 2 for more information on FTP.) The file called sstv_wefax_info is maintained by John Langner WB2OSZ (johnl@avs.com).

The ARRL e-mail server contains an introduction to SSTV in the file SSTV-INFO. (See Part 2 for more information on the ARRL e-mail server.) There is a bibliography of ATV articles from QST in the file TV-B. (See Part 2 for details.)

The KA6ETB e-mail HAM-server has files on SSTV and WEFAX in the directory /hamradio/sstvfax.

Another resource is the regularly-posted UseNet Elmers Directory. The list contains a volunteer Elmer who can help with ATV, SSTV, and WEFAX questions.

** What are these contests I sometimes hear, and how do I participate?
Dozens of contests are held each year, usually at weekends, and can provide useful operating experience. They typically last for 24 or 48 hrs, and are usually on SSB or CW only (the Russian CQ-Mir contest is on both modes at the same time). You can participate by making one QSO or several thousands. In most contests you send a signal report (traditionally 59 or 599) followed by a number that is different for different contests - the most common one is a serial number (so you send 599 001 for your first QSO, then 599 002 etc). The exchange may, however, be your age (All Asian contests), your CQ or ITU zone (CQWW and IARU contests, respectively), your state (ARRL contests) or something else. Read "Contest Corral" in QST for the rules for all

major contests - the more serious contester may wish to subscribe to the National Contest Journal, or join the e-mail contest mailing group (write to Trey, WN4KKN, at garlough@tgv.com). Knowing the rules can prevent embarrassment - you will get a cool reception if you are a W or VE and call a W/VE in the ARRL contests, since they can only work non-W/VE stations. Otherwise, QSOs made in contests are just as valid for DXCC (DX Century Club - more than 100 contacts), WAS (worked all states) and other awards as are 30-minute ragchews. Although not strictly a contest, the annual Field Day provides very useful operating experience under less than optimal conditions and is highly recommended for new operators - check with your local club for their Field Day plans some weeks before the (late June) event.

For more information on contests, the ARRL e-mail server has the following files: CONTESTS-93 (as of this writing, substitute current year), CONTEST-LOGS (for contest log formats), FORM-10M (10m contest entry form), FORM-VHF (VHF contest entry form), and others.

: is okay also.

I believe the key difference here is between encoding and encrypting.
Although GIFs and binaries are encoded, they are not encrypted. That is,
they use a standard, known, method and may be decoded by anyone receiving.
Encrypted data, designed to do just the opposite, allow only the party with
the key decode the data. If your data stream is easily identifiable as
legitimate traffic, i.e. easily decoded and checked, there is no problem.
If you encrypt your data you may well be sending commercial traffic or
espionage ;-). This would be particularly true with PGP since (supposedly)
even the NSA can't crack it.

Just my $0.02.

I agree 100% here. PGP is specifically designed to make the information
unreadable. And it does an EXCELLENT job of it. It is therefore NOT
legal to encrypt amateur radio traffic with it. However, it has
another possibly useful application to amateur radio: the PGP signature.

PGP allows you to create a TEXT file where the message text itself is NOT
encrypted. However, a digital signature which is totally unique to the
originator (and unique for each and every message) can be appended
to the UNENCRYPTED text. This signature cannot be forged.

This allows you to be virtually CERTAIN that the person who sent the message
is who he says he is. The implication to amateur radio here is that you are
then CERTAIN the person with the callsign listed sent the message. If all
radio amateurs were using this, bootleggers and suspected pirated callsigns
could be readily identified. Of course, getting everyone on packet to do
this regularly would be a major inconvenience and pain in the butt. Yet,
it IS a real solution to a problem.

If anyone is interested further in this subject, check out the
alt.security.pgp newsgroup of the internet. PGP V2.6.2 is now
available for FREE distrubution among private individuals (not
corporations) in the United States. It is NOT legal for
export (however, it's foolish, IMO to believe it is not already
out of the US and spreading like crazy, it's an excellent piece
of software).

Back to possibly USEFUL applications of AMATEUR RADIO encryption,
even though it is currently illegal...

Distribution via packet radio of repeater autopatch and control
codes among club members and control operators.

"Confidential" club membership rosters and phone numbers.

Distribution of security codes for TCP/IP based BBS or even your
AX.25 TNC's remote sysop password among trusted friends.

Those are three examples I can think of right off the bat. Anyone have
any others??

Of course, once you DO make amateur radio encryption legal, there is no
way to be sure WHAT the encrypted traffic is and therein lies the problem.
One could easily move "business related" traffic without anyone else's
knowledge. However, I wonder why ANY businessman worth his salt would
waste his time moving data over something as terribly slow as the amateur
radio packet network, even if it WERE legal ;-)) Sometimes we give ourselve's
far too much credit, IMO.

Well, IMO, I'd keep MY fourteen-year-old daugher away from CB.
Actually, I only have a 5-yr-old son. But if the CB chatter I've
heard on my HF gear (which receives 27 MHz) is any indication,
her young female voice will INSTANTLY be recognized. As such,
the perverted comments and harassment will soon follow.

Why not give a listen to 11 meters in your area some Friday or
Saturday evening and see what turns up?

You said "a few miles away". How far and is it line-of-sight?
GMRS UHF handhelds might do the job just fine. This may
encourage the HAM radio use without exposing her to the
CB nightmare. Radio Shack has some relatively inexpensive
(to amateur HTs) GMRS handhelds. It's even legal (up to a
point) to install a GMRS antenna other than the rubber duck.

You could even get one of the cheaper Motorola UHF HTs
programmed to GMRS and install one of the plug-and-play
analog voice encryption chips (from companies like MX-COM)
and she and her friend would really have privacy. However,
it may be illegal to encrypt on GMRS. I'm not sure.

^^^^^^^^^

"Some", of course, varies with the intensity of the earthquake and
how robust the cell site is. Some of the cell site's I've seen near the
Gulf of Mexico (hurricane territory) look like military installations with
two barbed-wire fences, microwave links (in case land-lines fail),
generators and a tripod-style tower that ALSO had guy wires.
I get the impression that a certain percentage of cell sites
are DESIGNED to survive the worst.

> The real strength of ham radio as an emergency

Yes. We are very independednt. And we have numbers. A little knowledge
of portable communications, batteries, generators, solar cells and portable
antenna goes a long way in a major disaster.

Here's some Email I received regarding an article I posted on disaster comms
to groups OTHER than the amateur radio crowd. I was looking for opinions
without the usual amateur radio bias. ;-)) I realize, of course, that as the
intensity of the disaster/event increases, more infrastructure is lost and
amateur radio becomes increasingly important. Note the comment on battery
back-up of cell sites in the article below.

>
>How robust is the cell phone infrastructure?

Kevin,

Things held up pretty well after the latest Northridge CA earthquake.
PacTel/AirTouch Cellular, the Motorola infrastructure customer in So Cal,
had outages at less than 15 cells. 6 cells continued to work even though
they were located in condemned buildings. Airtouch has more than 500 cells in
the LA area (About 800 I think). LA Cellular, the Airtouch competitor which
uses imported cells, lost 80-100 cells, many of them after the battery backup ran out
at their cellsites. Airtouch's problem was largely the increased call volume,
which was much much greater, especially in the areas where the competing cells went out.
This was discussed in a cover story article in _Cellular Business__ trade magazine earlier
this year. Both LA Cellular and Airtouch were quoted in the article and said
they were happy with how the cellular infrastructure survived.

: through the toroid core about 15 times. This eliminated all RFI from the
: telephone. In some extream cases, I also added a .001 cap in parallel
: to the line at an additional cost of .3 cents each.

: Save yourself some money. Buying the K-Comms and International
: Communications Engineers' filters are just making them rich.

The commercial filters do have a few advantages. They are small and attractive. If you go over to a neighbor's house with a 1" toroid and tell them you have to add it to their handset, you will probably meet with some resistance. Using a commercial filter also helps emphasize that you are helping a neighbor solve HIS problem. If the neighbor has a problem develop in the telephone later, it is almost certain YOU will be blamed if you have installed a homebrew filter.

There is another risk to the homebrew filter; if you use "unknown" material, they are less likely to work. Most of the filters use #43 ferrite material, with other materials selected, using various numbers of turns, for different frequency ranges. #43 works well over upper HF and VHF, for lower HF, use 75 ,73, 77 or J material. These materials do work, and if you are installing them on your own phones, or in the telephone lines, they do offer an economical solution.

Generally, if the capacitor also helps, it indicates that there is some unbalance in the line, causing differential-mode pickup in addition to the more usual common-mode pickup of RF on the phone line. If caps do help, you can use 0.01 uF for HF, 0.001 uF for VHF. I would use part with at least a 200 volt rating, to help ensure the cap can withstand the ringing voltage and possible induced spikes.

Ok, assuming you're really on the 70 cm band (420-450 MHz),
there are differences in propagation between VHF and UHF,
but they aren't as major as you seem to indicate. For line
of sight paths, and using antennas of the same *physical*
size at each end, UHF is actually better. For antennas of
the same *electrical* size, VHF has an edge. This usually
isn't significant out to the radio horizon. Unobstructed
line of sight range should be nearly identical for VHF
and UHF.

Over obstructed paths, or beyond the radio horizon, things
get a bit more interesting. Depending on the exact path,
and a number of other factors, VHF or UHF may be better in
a particular case. Both waves will refract to some extent
around obstructions, with VHF having an edge. And both waves
will reflect to some extent, with UHF usually having an
edge. Path losses caused by foliage are higher at UHF than
at VHF, but UHF penetrates into buildings better than VHF.

Temperature inversion effects are common on both bands.
It sounds like your antenna is low enough that the path
to the "talking S-meter" repeater falls into the first
Fresnel zone during inversions. That's why your signal
strength varies over the path. You are getting either
enhancement or signal cancellation due to the Fresnel
zone as the temperature profile near the ground changes.

You should note day/night variations, especially near
dawn and dusk, over the path as the ground heats and
cools. The same thing happens at 2 meters, but at a
different antenna height for the same path. If you move
your antenna up or down a bit, you may find that 70 cm
becomes stable and 2 meters becomes the one that comes
and goes over this path.

True ducts are also common at certain times of the year.
These can enhance your signals well beyond the radio
horizon (out to 200-400 miles). It doesn't sound like
you are dealing with these.

I've been operating a 70 cm repeater for several years
and find that the coverage is very similar to that of
a 2 meter repeater at the same height. The only substantial
differences are that nulls are deeper, and enhanced areas
are greater than at 2 meters, but they are also smaller
in extent. You often only have to move a few inches one
way or another with your antenna to go from uncopyable
to rock solid.

>clueless dude would be greatly appreciated. Reply here or to

John, the FCC is right. It *is* your fault. It's your fault as a
consumer for not demanding that equipment that is not supposed to
be a radio receiver *really* not be a radio receiver. Even if this
CBer is operating illegally, and he probably is, that doesn't excuse
telephones or stereos picking up his signals. Now if he was getting
into a *receiver*, some or all of the blame might be on him, or it
might not, receiver manufacturers are doing a shoddy job too. But
anyway, this all boils down to the fact that *you* are going to have
to solve the problem created by the consumer manufacturers, and maybe
partially by Mr. Big Mouth CBer as well.

The FCC pamphlet isn't all that helpful in these cases. The ARRL has
a book on radio interference that can be helpful, and an on-line
info service as well. Basically what you're going to have to do is
intall the filters and shielding the consumer gear manufacturers
left out. It's usually not expensive, a few cents in most cases,
to fix equipment that's not supposed to be a receiver so that it
actually isn't a receiver. This may require you to open up the
equipment and do a little soldering, but it's not rocket science.

You can sometimes get satisfaction from the consumer equipment manufacturers. They generally know what to do to fix the problem, they just don't want to spend the few cents per unit it would cost to build them correctly in the first place. If you complain enough, being very pointed about the fact that their equipment is *not* supposed to be a receiver, you can often get the equipment fixed for free, or at least get them to send you a filter kit you can install yourself.

:

Hi Zack,

Thanx much for the info. I spoke w/Jim Cox at Micro Metals, yesterday.
He suspects that the problem is with the wire I'm using and the losses
are attributable to this. When copper heats resistivity increases. I'm
already using 12 ga. Thermoleze and going to 10 ga. doesn't increase
the surface area (skin effect) enough to make a difference at 2Mhz.
His suggestion is for me to get some Litz wire and rewind the toroid
with it. A local ham confirmed that ETO uses Litz wire in the toroidal
Pi-Nets in their high pwer amps. So, I'm off the call a few wire Cos.
to get a lead on some Litz wire. However this turns out I'll post it
here for others to see.

73,
Walt - K2WK

: Do yourself a favor and get some cores made with Fair-Rite #67 material.
: This stuff is phenomenal. I've measured Q's as high as 600 at 10 MHz.
: with it. If you want to get really low losses, talk to Ceramic Magnetics.
: They are the acknowledged experts at this.

I've also noticed the very high Qs.

However, there is another advantage of iron powder material, at least
if you can keep the stuff from heating up. Inductors on type 2 material
vary only 95 ppm/degree Celsius. Thus, over 20 to 50 degrees Celsius,
you get an inductance change of 0.285 percent, which is pretty
insignificant for a tuned matching circuit with a Q of 10. On the other
hand, type 67 material varies by 0.13 percent!/degrees Celsius. You might
not be able to ignore a 3.9 percent variation.

However, it is possible to "live with" an amplifier that drifts
between hot and cold states. I remember calling CQ a lot at
W1XX/3 on 23 cm to keep the amp warm. We did really well on
that band so it made sense--at least for us.

Reread the above. Greg was talking about the ARRL. Then Jeff was talking about the ARRL. Then follows up with a comment about sodomy.

During the recent Thanksgiving traditional _Twilite Zone_ marathon on the television, did anyone see the show where the guy continually harped about "why couldn't everyone else be like him". He got his wish and it was hell. He was quite happy to go back to a world of differences.

Jeff (The one with better reading and comprehension skills)

: was probably an article in CQ or QST. Anyone remember any or have a schmatic?

: Thanks. de KA3PLS

What type of supply? Astron's use a 723 regulator. The wiper of the
voltage set pot needs about a 10K in series to protect the 723. Then
set the ps to 13.8v. Hook the ps up to the battery. When on it charges
the battery and supplies the load. When off, the battery supplies the load.
Turn the ps on before connecting to the battery.
Pretty simple?

for other than an Astron, you need to look at the ps schematic and see
what is being used for regulation and what needs to protect things when
the supply is off. the supply is off.

And here it is, straight from the archives. I don't remember you posting a correction at the time Jeff. How about telling us what's wrong with it now?

Perhaps I skimmed by not checking his math, or correcting for velocity factors. I hardly see how that qualifies a major blunder on a receiving antenna for commercial FM radio broadcasts.

We are waiting for the corrections.

> before the drill....or as long as they have prior notification of a disaster.

And as long as the disaster in question doesn't take out the cellphone network. Any self-respecting earthquake, hurricane, or flood will topple some cell towers. The real strength of ham radio as an emergency communications medium is its independence. One guy with an HF set, a car battery, and a wire heaved over a tree limb can communicate world-wide if need be. Locally, two guys with HTs are lots better than 50 guys with cellphones if the cell sites are down.

My 14 year old daughter has a friend who lives a few miles away, and the two of them chat on the phone for hours on end. When I complained about not being able to use the phone, she asked if they couldn't use a radio instead. I told her all about ham radio, but she feels like studying for the test would be too hard (she's not an electronics type). She knew about CB and asked if that would work. I said it would, but that I didn't feel too good about going that way. What do you think? Am I better of getting her a CB set, in the hope that it will turn her on to radio and help motivate her to get a ham ticket? Or should I hold out and insist she start and stay with ham radio? Thanks for you opinion.

Swore I wasn't going to get involved in this, but...

Grady, I assume your particular area is not heavily populated. Certainly most of your sweeping generalizations do not apply to the northeastern U.S.

For example, hereabouts (southeastern PA) if an emergency of local scale occurs, dial up 911 through any one of several local repeaters. Yeah, you could do it by cell phone, but I don't have one.

If an emergency of large scale occurs, the cell system immediately saturates! This has been documented for several areas in reports of emergency activity in QST. Amateur radio provides an alternative communications path until the initial surge subsides. Also, the local public services can't talk to one another, and the same service usually can't talk to itself in the next county. Hams provide links until some other service comes in and sets up a more permanent link. Yeah, they ought to include stuff like that in their emergency preparedness plans, but in practice, they don't.

For general public-service work, such as helping out with a charity event, cell phones haven't proved very effective in our experience. Several problems occur: "Oh, we gave that team a cell phone, but I guess they didn't turn it on." I've been trying to reach you with the cell phone, but it doesn't work from where I am." Plus, when you want to reach everybody at once, do you want to make several calls on the cell phone, or just one on 2-meter simplex or repeater?

As far as monitoring and maintenance, few groups are as demanding about maintenance as our local club. The guys who do the maintenance keep it up

and running, or they don't hear the end of it. And on the _very_ rare occasions when one repeater is not being monitored, one of the other ones is.

So maybe you're right out in the boonies. But what you're saying certainly doesn't hold true in this part of the country.

>one of my resource books claims? .

Bill,
Well there you have the reason. UHF is more affected by tropo than 2m,
consequently you find more enahncement in the morning or so.
On the other hand it is much more sensitive to the topoggraphy
which may partly be the reason for your frustration.
The big advantage is the ease of using highly directional antennas.
For contacts with omni's, when you dont want strange tropospheric
or local geographic shading effects, you should think about 6
or 10 m or roundabouts.

OK, now I'm confused. I used to run a gel cel with my TS-850. I had an
Astron-35 PS connected to the battery leads and then had leads from the
battery went to the radio (plus TNC, plus 2M HT.) I ran that set-up
for 2 years. To my knowledge, no damage occured. When I first started
using this set-up power was being ration, cut 4 hr in morning, 4 hr in
afternoon. I used the gel cel as a back up during those times. I never
turned the PS off. Did I risk damaging my PS? I didn't worry about
cooking the gel cel because my HF rig stayed on all the time, as did
my TNC and HT. There was alway a load. Maybe that was the reason no
damage occured? Comments?

>
>Mike, N4PDY
>

Just my thoughts. Having listened on CB a few times, of late
expect the language to be pretty raw. Not sure your daughter needs to
be exposed at 14. That's your call.

There are a lot of crazies out there and if your daughter is like most
they forget they are being heard by EVERYONE and often say things that
might put them in jeopardy. I feel certain someone will find her sked
with her friend and know all her intimate details. Plus, most of what I
hear from 14 yr olds might not be suitable for the public at large.

FWIW
I did have a close friend when I was in High School who was active on 11M
and she turned out ok. That's how I got my start in radio, talking to
her.

Last comment. Has she ever seen the Look Who's Talking book. Let her at
least glance through it before she passes on the no-code tech.

3834. GB2RS News 11th December 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-08 19:06:20 UTC
From: dave@llondel.demon.co.uk
Message-ID: <786938780snx@llondel.demon.co.uk>
Source record: 255419
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 11th of December and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Now this week's headlines:-

We have the result of the RSGB Council election,

The result of the voting at the RSGB Extraordinary General Meeting,

and some repeater news.

The Annual Meeting of the Radio Society of Great Britain took place at the Royal Society of Chemistry, London on the 3rd of December. The meeting included an Annual General Meeting and an Extraordinary General Meeting.

At the AGM, the result of the election for four Ordinary Members for the 1995 - 97 Council were announced as follows:

N Roberts, G4IJF received 1629 votes; G R Morris, GW1ATZ, 721 votes; R Horton, G3XWH, 1532 votes; M G Shread, GM6TAN, 1098 votes; D B Glover, G1VJP, 881 votes and E J Allaway, G3FKM, 1626 votes.

The President declared elected: l: N Roberts, G4IJF, E J Allaway, G3FKM, M G Shread, GM6TAN and R Horton, G3XWH.

The result of the election for Zone 'E' (Wales) is as follows:

E P Essery, GW3KFE, 93 votes and M J Adcock, GW8CMU, 48 votes. Therefore E P Essery, GW3KFE was declared elected.

P R Sheppard, G4EJP, has been elected unopposed for Zone A, the North of England. I J Kyle, GI8AYZ, has been elected unopposed for Zone F, Northern Ireland.

A full list of the 1995 RSGB Council will be published in the January edition of Radio Communication.

The EGM had been called by the Council to make a number of amendments to the Society's Articles of Association, which provide the ground rules for running the Society's affairs. All RSGB members received details of the proposed changes with the November edition of Radio Communication. At the meeting, all six Special Resolutions were carried overwhelmingly.

The full Minutes of both meetings, together with a report on the question and answer session will be published in RadCom as soon as possible.

Next week's GB2RS bulletin will include the first part of our annual review of the year. There will be no bulletin on Christmas Day, and the next GB2RS, on the 1st of January 1995, will conclude the review of 1994.

GB0TEN is a special event station celebrating the tenth anniversary of the Brickfields Amateur Radio Society on the Isle of Wight. Operation will be from now until Friday the 30th of December on 80m, 2m and 70cm.

The latest batch of repeater applications forwarded by the RSGB to the Radiocommunications Agency includes six for packet radio repeaters: GB7BS at Bristol for 144 and 439MHz, GB7EH at Edge Hill for 430, 432 and 439MHz and GB7EA at Bury St Edmunds for 1.3GHz. All applications are processed by the RSGB's Repeater Management Group to whom any enquiries should be addressed. As usual, the Society will inform keepers of progress by distributing the RA's monthly progress reports.

The Rochester repeater, GB3RE, was closed down last Sunday and will remain out of service until its new site is cleared by the RA. For further information, contact the keeper, G4AKQ, whose address is correct in the RSGB Call Book.

The Hexham repeater GB3TY, on channel R6, was switched off and is now closed down permanently, since Wednesday the 30th of November. For further information, contact the keeper G0GXO, whose address is correct in the RSGB Call Book.

The new RSGB QSL Sub-Manager for the G6AAA - G6ZZZ callsign series is Mr C R J Healey, G0NCS, whose address is: 22 Sterling Road, Plymouth, Devon PL5 1PD.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Mauritius, F6HWU will sign 3B8/F6HWU from now until the middle of December on all bands 160 to 10 metres, especially CW.

From New Caledonia, a group of Japanese operators will sign FK/Own Call from Thursday the 15th, until Tuesday the 20th of December on the WARC and LF bands.

And from Rwanda, PA3DZN is now active as 9X5EE on 10 to 40 metres and hopes soon to be on 80 and 160 metres.

Next the Rally News, and we know of one event for today, Sunday the 11th of December:

The Verulam Amateur Radio Club Rally is being held at the Watford Leisure Centre, Horseshoe Lane, Garston, Watford, a new venue for this event. Doors open at 10am. The event features a bring and buy stall, and a grand raffle. Refreshments will be available and talk-in is on 2 metres, channel S22.

Now for the HF contest news:

The ARRL 10 metre Contest finishes today Sunday the 11th at 2359 UTC. See December's edition of RadCom, page 19 for further details.

Next some VHF contest news:

The last of five RSGB 432MHz Cumulative Contest will take place next Tuesday the 13th of December from 2030 to 2300 UTC. For further details see July RadCom page 82.

The first of the RSGB Winter 2.3GHz-and-Up Cumulatives Contest takes place next Sunday the 18th of December, from 0900 to 2100 UTC. For details see November RadCom page 78.

And now the solar factual data:

We are pleased to announce that all of our data sources are now back on line. The period from the 28th of November to the 4th of December saw solar activity at very low levels. However a small series of B-class flares on the 30th and 3rd, together with the passage of a coronal mass ejection, increased the geomagnetic activity to 'mostly unsettled'. The sunspot indices fell from 32 on the 28th to 11 by the 3rd, with a mean of 22 for the period. Only some minor B-class flares were reported on the 30th, but a B7.4/SF flare was reported on the 3rd at 12.46, but nothing came of it.

Solar flux levels are now remaining fairly constant at about the 90-day average levels, varying only slightly from day to day and averaging 80 units. Previous minima have flattened out at around 68 units, so we have still some way to go before that point is reached.

The x-ray flux levels showed a steady increase from A4.2 on the 30th up to A7.2 units by the 4th. The period averaged A4.7 units. The 90-day solar flux averaged 82 units on the 4th of December.

Geomagnetic activity was mostly unsettled with the most disturbed day being the 2nd, when the Ap index was 18 units. The 29th of November and the 4th of December were quiet days, with the Ap index at 7 and 6 units respectively. The average Ap index for the period was 11 units. The state as been 'nil, nothing to report'. The aa indices, as reported by the British Geological Survey for the period from the 22nd to the 27th of November, started at quiet levels with the 25th being down to only 7.3 nanoTeslas, about K1. By midday on the 26th, levels had increased considerably up to 137 nanoTeslas, about K6, because of the passage of a coronal hole. This gave a daily index for that day of 66.1 nanoTeslas. The period averaged 24.2 nanoTeslas, about K3. The monthly RI sunspot number for November was 18.0 with a maximum of 48 on the 2nd and a minimum of 7 on the 21st. The smoothed sunspot number for May 1994 was RI 32.6 +/- 5.

I'll repeat the figures: Spots - 22, Flux - 80, Ap index - 11, x-ray flux - A4.7, November spots RI 18.0.

We have been able to catch up with some of last week's missing data. The F2 daytime critical frequencies at Poitiers, as reported by Meudon from

the 22nd of November to the 27th, saw average daytime levels of 7.9MHz. However, the 26th saw a pre-auroral enhancement to 11.1MHz just before the magnetic storm. The period from the 28th November to the 4th December saw daylight levels average 7.4MHz, with little variation from day to day. The darkness hour lows have seen little change over both periods and averaged 2.7MHz. Spread-F was reported during some early mornings. The highs are now taking place around noon, and the lows between 04.00 and 06.00 hours.

I'll repeat the figures. Highs - 7.9 and 7.4MHz; lows - 2.7MHz.

And lastly the solar forecast:

This week, the quiet side of the sun is expected to be looking our way. Solar activity is expected to be very low, with solar flux levels down to the mid 70s. Geomagnetic activity is expected to be mostly quiet but may increase to unsettled levels towards next weekend. Ionospheric MUFs during daylight hours in the south are expected to reach 24MHz, and in the north 20MHz. Darkness hour lows are expected to reach 10MHz on north/south paths with east/west paths being about 7MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Mike and G7 Tango Whiskey series, and Novice calls in the 2 0 Alpha Juliet and 2 1 Delta Oscar series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

This works as long as the cellular sites are then only used for emergency communications. The problem with that is that even if they survive an emergency situation, people will be calling to find out who has flashlight batteries in stock, who do I call to restore my gas/power/water/newspaper delivery, or call neighbors and family to see if everyone is all right. Having a completely independent non profit system of communications where operators take enough interest in their equipment to understand how it works, and practice handling emergency communications is a good and necessary thing. The analogy I might offer is roughly equivalent to the minutemen, everyone owns their equipment, volunteer to help when the need arises, and expect nothing other than satisfaction for a job well done in return.

Most of the Hams I know don't have all the knowledge they need to repair their own equipment, but then for the most part, they have backup equipment just in case.

Well, gotta go....

I have been following this thread for some time now, and I will put in my $0.02 at this time since I have personal experience to relate. First, a bit of background. I commute from the Antelope Valley down to Pasadena, California via the Angeles Forest and Angeles Crest Highways, which cut across the Angeles National Forest. This is a winding, twisty route with steep dropoffs on one side and steep mountains on the other with very little clearance and few guard rails. One must be very aware of the road conditions while driving this route and drive defensively at all times. It is quite seldom that any of my carpoolers see a law enforcement official of any type (one of Grady Ward's "Trained Professionals" I'm sure) along the road so it is important that we each accept responsibility for how we drive even more so than on a freeway. After all, it is quite a remote location and any "Trained Professional" would not be able to arrive at the scene of an emergency for the better part of an hour if needed, much less have a high probability of spotting a problem as it happened due to low coverage. There is a relatively high volume of commuter traffic on this route as it is a good alternative to the freeway for the driver who is awake and aware of the situation.

This morning as we were making our way in to work we spotted a pickup truck that had gone "over the side" a slight ways. It had not gone out of eyesight so we initially thought it had maybe broken down last night and the driver had left it until daylight. As we proceeded down the road and around a couple of turns we got a better view of the situation and saw that, in fact, another car had preceeded the pickup and was 30-50 feet down the side. Another of my carpoolers is also a ham (KE6JTP) and he got on the 2M repeater we use in town, but the mountains killed line-of-sight. At this point we were nearing a ranger station, so we stopped there and tried to find a ranger to respond to the situation if necessary since they usually know about whether something has just happened or was "old news". I couldn't find any rangers. So he tried a machine on Mt. Dissapointment. He found some mobile hams, but nobody there who could make a phone call to CHP. However, they suggested he try a repeater that is frequently monitored by the police. He was able to contact a base amateur station who then called the police. By the way, there are no cells in that part of the Angeles National Forest, so the cellphone idea could not work. This area does have good 2M coverage, however. The base ham took the information from us and placed a call to the police. As we were coming into La

Canada we saw 2 LA County Sherriff vehicles heading up the Crest with their lights on. They are the professionals, but would not have known about the situation for quite some time without the help of the amateurs.

Remember, folks, what the point is. It's not the place of the amateur radio operator to tow the crashed car or render medical treatment (unless also trained and able to do so) simply because he/she has a radio. The point is to have and use the ability to contact others to place a call or summon a trained response. It is the amateur radio SERVICE, and let's remember that before suggesting that "Big Brother" take care of everything for us. If I was in one of those vehicles I would certainly want an amateur to use his/her radio to call for help rather than wait for the authorities to show up. I am quite confident that the proper course of action was taken and that it was my responsibility, not as a ham but just as a person, to do what I could to help in this situation. I don't know how many / if any people were in the vehicles or what condition any of them were in as it was not my place or in my ability to stop and rappel down the mountain to find out. If the trained emergency personnel are not made aware of a situation there is little chance that they will be able to respond to it in the way they are trained.

73.
###
BTW, the phone call was placed by a base station monitoring the W6FNO repeater on 146.82 MHz.

Fortunately (or unfortunately) not many places are threatened with earthquakes. In the Flat Midwest, we have tornados, which are unlikely to take out enough towers to significantly reduce the effectiveness of Cellphones.

Sigh.

To be safe, put a diode (large enough to handle the load) between the PS and the battery. If the PS gets turned off, it'll block any current flow back through the PS from the battery.

I think the manufacturers would lose money because the boating
users don't want to buy one more single purpose piece of electronic
gear with itsa associated antenna, wiring, and interfaces.

It seems way out of line that the use of VHF is defined away. A VHF
broadcast would be much more useful for the customer - us - who could
use cheap existing gear, rather than convenient for the producer - USGC.
It doesn't matter if the CG can save money by using MF transmitters from
the warehouse if no one is listening. How many boaters nowadays
carry low frequency beacon receivers or RDF's? How many carry VHF
radios?

And there's plenty of channels available at VHF.

Mike...

First off, let me disclaim that *MOST* CBers are fine folk, good, upstanding people.

BUT... ...given the sub-element that gravitates to an unlicensed radio service of any kind, I think the LAST thing I'd want would be for my teenage daughters to be discussing the kind of thing teenage daughters discuss over the public airwaves, generating the interest of any unsavory characters who might come along on the Interstate.

On the other hand, I don't think that the ham radio alternative is necessarily the best, either. How about her own 'phone line (perhaps in return for concessions regarding certain household support duties)?

Greg

I own a Yaesu FT11R, and I would like to hook it up to a power supply. It seems that Yaesu does not make any accesories that would allow me to hook up the HT to an external power supply. The only thing that they _do_ have is a "battery eliminator", essentially an adaptor to connect the HT to the cigarette lighter in a car. So, what I want to do is hook up a female end of a cigarette lighter into my power supply, and use the battery eliminator to connect the HT to the power supply.

Any advice [particularly from people who have had experience with the FT-11R] would be appreciated. I would love nothing more than to hear that there is an easier way to do all this...

Thanx in advance

To which the response is--so what? Not, of course, that I would advocate breaking the law, but it's an entirely unenforcable law--how can you _know_ that your conversation is being monitored? And, if you're worried about how private your conversation is, why don't you encrypt it somehow, rather than relying on an unenforcable law to protect you?

: >"If something comes into my house, and passes through my body, and my
: childrens body, and my pets body, I feel that I have a right to [...]

: This, of course, is an ignorant argument, that should not - and will not
: - hold up in a court of law.

Ignorant in what way? If you mean ignorant of the law, I guess you're right--it won't hold up in court. If you mean from a moral or ethical standpoint, that's another point entirely--the person you're quoting certainly provides a better reason for his position than you do for yours. Why _shouldn't_ it stand up in court?

Hugh,
I have a recent catalog from them.

Coilcraft
Cary, Illinois 60013

(708)639-6400

They have a good catalog on EMI/RFI filter products. :)

>clueless dude would be greatly appreciated. Reply here or to
>John.Senko@emich.edu.

Much of what you'bve been told here is, alas, correct. Your
consumer electronic equipment is improperly receiving transmissions not
intended for it. About the only thing you can do apply proper filtering.
I'll bet that by asking around you'll find a ham who's a member of the
lacal amateur radio club there and that they would be willing to help you
figure out what filters or combinations of filters would be effective for
your case.

But, there's more: depending on teh FCC office, they may be
interested in finding illegal CB operators. They certainly are here in
Denver and I'll be that if you ask the hams you find to help you discover
what filtering is needed, they would be willing to do some quick estimates
of the feild strength from this fellow's house and document that he's
operating outside of the CB allocation. WHile it's not the amateur's job
to do this, if they can document the infraction, the FCC typically will
act. At least they will here in Denver; I found splatter from a
"freebander" similar of a similar ilk and documented what I heard. the
Denver office thanked me and said that they'd been on the lookout for just
such stuff and would take enforcement action.

So, all is not lost. Two good things woudl result from what you
do: 1) your equipment becomes much better able to tolerate any strong radio
signals in the area (so if a ham moves in close to you, you'll never know
it) and 2) you'll help clean up some of the radio spectrum.

Let us know what happens!

Hammett and Edison Inc (hamed@netcom.com) wrote:
: Apart from chopping down the offending transmitting antenna or laying waste to his equipment, I would offer the following suggestions to interference-proof your equipment:

: 1. Telephones. Usually, it is the wiring in your home that acts as an
: antenna. If you can isolate your telephone from the wiring, that solves
: the problem. I am talking about telephone wiring, here. The trick is
: to isolate it in such a way that telephone conversations, which are audio
: frequency, still get through, while radio transmissions, which are radio
: frequency, are blocked.
:
: There are two ways to do this. The inexpensive way is to buy or build
: a filter. The best one is the TII model 931-W1, which is available from
: your local Graybar store. It costs about $15. You will need one for each
: telephone.
:
: Alternatively, you can buy an "interference free telephone" for about $50.
: Pro Distributors, Lubbock, TX 800/658-2027 and TCE Labs, Canyon Lake, TX
: 210/899-4575, both make them for about $75.

[snip]

Couldn't you also encase the audio wire in grounded aluminum foil?

GC>transmitting, like W1AW, on amateur bands, in modes used by amateurs,
GC>for reception by amateurs. If his intent was to reach the general
GC>public, he'd use modes and frequencies in common use by the general
GC>public for reception of broadcasts.

Hi Gary, yes of course. All of that ridiculous sabre-rattling by the
group of ops in Georgia is a waste of their time, but pretty typical
75m SSB fare these days unfortunately!

K1MAN is providing a great service to the amateur community.
Any time someone does this, there will be those who grumble.
It's just like the guys who deliberately call CQ on top of W1AW
code practice sessions or bulletin transmissions on HF. They
eventually give up but boy is it a nuisance. I could see complaining
if we had 10-12 stations all transmitting bulletins like this, but gosh
we HAVE a large band there at 3.5 - 4.0 MHz with plenty of room for
everyone!

Hi Rich, I wish people who think like that would realize that learning Morse code has nothing to do with smartness, IQ, determination, knowledge, degrees, etc. When Doc says he can't discern the difference between a dit and a dah, are you implying that he is lying? Some people are biologically incapable of discerning the difference between a dit and a dah. My Dad is one of them and could be Doc is another. I have a friend who is another. For some people, Morse code ability is like eye or skin color. They have absolutely no control over it. I suspect that the majority of the human race is genetically incapable of learning Morse code just like the majority of the human race is incapable of dunking a basketball.

There's a shareware program called RadFax which does a good job of WEFAX
reception. I run it on a Quadra 605 fed by my ICOM 735. The audio-out
line on the mic jack puts out the right level for the microphone input on
the Mac. I got it on floppy from a friend of mine but I think he found it
on Compu$erve. I don't use CW recognition software, so I can't address
that question. 73 de KF8MO -Lee

To Reply to the comment that the letter "K" is a detriment as a last letter in a callsign while operating CW.... I disagree!

I've been NC7K sine April 1983 and seldom have a problem with folks losing the "K", even when operating EME on 144 Mhz. (Thems some W E A K signals!)

No My biggest headache is folks putting the 7 before the "C" and coming back to "N7CK". Not so much with folks of my generation but folks from the 50s and 60s almost automaticaly switch them and Voila! I'm now "N7CK"

The key to not letting a last letter "K" be a problem is to send very clean CW.

On a slightly related note.... I will be Mountaintop Portable in DM09 for the upcoming January VHF QSO Party. I'll be QRV on 50, 144, and 432 MHZ SSB/CW looking for any and all contacts. I'll CQ 144.210 alot so PLEASE tune the band and find me. As usual I'll have big antennas and decent power so it should be a problem for folks within 500 Miles or so. Best 73s es DX from DM09ep... Happy Holidays! de Tim - NC7K...sk

Well, I think if we are forced to deal with a "sudden outbreak
of freedom" it would be best to let it happen at the low of the
sunspot cycle. This way we can better train the massive influx
of new HF operators. I still think that CW will be the "way"
to work that elusive rare one, especially with conditions so
bad. SSB just doesn't cut it with propigation being what it is
nowadays and most op's in 3rd world countries still can't
afford a SSB transmitter and the code is IT in these areas....

In the case of the OM who leaves the XYL the 10 meter amp, she is more than likely protected by the fact that the amp is part of an estate and she could posess the amp because she did not purchase it. Remember, it's still not the posession of the amp that is illegal, just the purchasing or use of it. This is one way someone could legally obtain (but not use) this equipment.

Hi,
As my first posting to this newsgroup I'd like to ask what I have to do to operate two meter FM in Nassau. I know that I need to contact the government there and that there is so sort of reciprocal agreement we have with them, but I need to know the process for gaining permission to operate. Also are there any additional restrictions on operations that aren't present here in the states? Your help would be appreciated. Also, if you would e-mail me rather than post a response in to save me time, as I haven't got much during finals!!!

I think there is a little more to it than that. Some of the larger Astron power supplies have a large SCR that is used in the crowbar circuit. When the power supply crowbars, the SCR fires, and puts a dead short between the positive and negative of the supply DC output. If you have the output connected to batteries that are being charged, and this condition occurs, you have a major problem, smoke, fire, belch and wheeze.

You need to install a fuse in the output circuit to protect your batteries from the Astron crowbar circuit.

There was a very good series of articles about this subject a couple of years ago in QST. I read it, but did not save it. I remember there was also some small modification needed to protect the LM723 in the Astron also.

Maybe someone saved the article, or perhaps you can request a reprint from ARRL.

Gel cell batteries need to be floated at less than 13.8 volts. I don't
remember the exact voltage, maybe someone else on here can tell us.

Mark,
Try email-ing Bill Hardy at 73201.2263@compuserve.com. He's the pres
of the IRCA which specializes in AM DX'ing. I also do some DX'ing from
here in Guam. I can tell you your best bet nowadays would be to get a
good-quality shortwave receiver. There used to be good radios you could
get (I have a couple) that were designed specifically for long-distance
on AM, but no more as far as I know. The shortwave receivers I speak of
are a little pricey ($500+). Another option is to get a used radio. Bill
should be able to help you in that regard. Tell him I referred you.
Good luck.

Yes, I believe that is already the case.

In my experience, AT LEAST 9 out of 10 emergency autopatches that I hear on the local repeaters, result in the emergency dispatcher stating that the report has already been received. This is obviously the result of FREE 911 access offered by virtually all cellular providers. Simply count the number of cell phone antennas you see on the cars these days (this completely ignores the portable hand heldcell phones) vs the number of amateur radio 2-meter or 70-cm antennas. Of course, this is not DISASTER comm, but it does illustrate the incredible growth of cellular, which continues to grow at ever increasing rates.

3872. Satellites!! (was: emergencies)

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-09 12:11:26 UTC
From: kevin.jessup@mail.mei.com
Message-ID: <kevin.jessup.194.00B2C52E@mail.mei.com>
Source record: 254873

I thought I'd post this given the rececent discussions of
communications infrastructure and cellular survivability
after natural disasters.

From an ad by TRW/TELEGLOBE in the December issue
of "Telecommunications" magazine. While I agree this is
the typical marketing hype of an initial product announcement,
that does NOT mean such systems won't eventually do
what they promise.

[Beginning of quoted article]

"Today's market is clamoring for truly portable, global personal
communications. But the costs of such a system - costs that will
ultimately come out of the consumer's pocket, have remained
dauntingly high. Until today. Because today we launch the
Odyssey (tm) system. In a world in which most people lack access
to even basic telephone service, this satellite-based mobile system
will provide convenient, effective, consistent communications to
subscribers worldwide. And it will do so at a price that compares
favorably with the cellular service it will augment where such
service exists, regardless of regional carrier compatibility.
WHEN TERRESTRIAL SYSTEMS ARE ABSENT OR INTERRUPTED,
YOUR HANDSET WILL LINK YOU DIRECTLY -AND
TRANSPARENTLY - TO AN ODYSSEY SATELLITE.

"Odyssey consists of 12 satellites operating at medium-earth orbit
(MEO), the optimum orbit for a voice communication system.
MEO means...

* less shadowing than with low-earth orbit (LEO) or cellular
systems for more reliable service
* less voice delay and echo than geostationary systems
* lower overall system cost
* faster system start-up
* the lowest end-user cost

"An important feature of the Odyssey system is it's use of
directed antenna coverage to serve the Eath land masses
and keep users "in sight".
This feature will allow Odyssey to...

* reduce the risk of call interruption
* focus service wher the demand is greatest
* use system capacity more efficiently
* provide dual-satellite coverage for greater reliability

* further reduce subscriber cost

"Simpler technology and faster start-up are scheduled to
bring Odyssey into global servicein 1999, before any other system."

[End of quoted article]

Other than Odyssey, other global personal communications satellite
systems are planned or ALREADY under development. Here is a
VERY SHORT summary of MOST of these systems.

Project 21
A developing concept for Inmarsat's fourth satelite generation to
serve hand-held land-mobile terminals/phones without burdening the
cooperative's maritime mission.

Iridium
A constallation of 66 LEO satellites providing service to hand-held
terminals/phones. Includes inter-satellite links to drastically reduce
ground support. Motorola/Sprint/BellCanada/Krunichev/China/others

Globestar
Digital code division multiple access (high capacity)
Qualcomm/Loral/AirTouch/Alcatel(France)/others

Elipso
Six to 18 LEOS. US Domestic servcie only.
Mobile/Interferometrics/Fairchild/Harris/others

Aries
48 polar orbitting LEOS
MicrosatLaunchSystems/private investors

Teledesic
840 !! Refrigerator-sized LEOS delivering global multimedia
real-time communication. Craig McCaw and Bill Gates

Give them all time. What will be the importance of amateur
radio emergency communications in 10 years? Any comments??

73.

Many thanks to those who responded to my post asking for opinions about getting my daughter a CB set. Most pointed out the lack of privacy and the presence of numerous whackos on CB. Most also pointed out that for the cost of 2 cb sets and power supplies, I could get her her own phone line. I have been resisting that idea, but it may turn out to be the best solution. Thanks to all.

Hiya-

Seeing at the bands are in somewhat bad shape for serious DX work,
I thought I'd finally get off my butt and go for 5 band Worked All States.
Not an easy accomplishment. However, I' ve got a couple questions.

1) Is it a "generic" award, or do they have seperate classifications for
SSB and CW? In other words, do I have to keep track of CW and SSB QSO's
seperately?

2) Do they have a 160m endorsement? (So I guess that would be 6B WAS)

Thanks for any input. Please e-mail any responses.

I wonder how they enforce this? ;-))

>Have you tried morse code with the bedroom lights? :-)

Yes. But the FVLC (Federal Visible Light Commision) says
I first must pass a 13 WPM test before I get access to
the really useful (truly visible) portions of the spectrum. As it
is now, I only have access to the near ultraviolet portion of
the spectrum (which is not of much use for DX). So the
bedroom light method is out! ;-)))

[[EXAMNT12.09 : 2642 in EXAMNT12.09]]

* News Flash * Effective December 1, 1994, FCC began accepting
Form 610 data electronically from the ARRL, W5YI and Sunnyvale VECs.
Four more VECs should also be doing so shortly.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 23-26 days. This includes 5 days between the
VE team and the VEC; 1-2 days at the VEC (in some cases the same day);
and 16-19 days at the FCC.

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC recently has been taking
just under 4 weeks to issue a license after the application (or
application data) arrives at the FCC.

The FCC considers their processing time to be 90 days--from the date
they receive the application. The FCC usually receives the application
one to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will effective 6/8/94 receive a new license from
the FCC that reads "TECH PLUS." Such upgrades before that date
would not receive a new license but would need to retain the
existing Technician license plus the CSCE conveying the Morse
code test credit as the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional

information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

In article <richg.15.2EE5E0EE@aloha.com> richg@aloha.com (Rich Glickstein) writes:
> My advise to you is, rethink your position. Look at it not as having to
>become that blacksmith, but having to take those prerequisite classes in
>college that have absolutely nothing to do with your BS or MS. It makes the
>well rounded ham!

I agree that a positive attitude is very important in learning the code.
However, there are still people who just can't learn it, for one reason
or another. If someone physically cannot learn the code, then we
shouldn't discriminate against them (like we currently do).

Also, the code is not the all important mode of communication it once
was. I see no (or very little) reason to keep it as a requirement
(other than well-rounding, or the ever present keeping out the riff-raff
argument which doesn't hold any water...).

[If anyone is wondering, I love the code, and I wish I had the room to
set up an antenna farm and the time to work CW everyday...]

3882. Re: Looking for 1750 meter information

>Subject: SUMMARY: Yes there is a 1750 Meter band
>Date: Sun, 07 Jun 1992 21:30:26 -0700

As requested by several people, here is a collection of highlights
of the replies I recieved to "Does 1750 meters really exist". It
looks like one of the replies was from a FAQ list, but since I got
several requests to summarize, I'll go ahead and consume the
bandwidth.

Many thanks to all that took the time to reply. And many thanks
to all those who caught the error in my .sig. I guess I'll go
listen to the tapes some more :-).

Thanks again.

73s,
jerryp@key.amdahl.com
KC6RTO

>From alan@dsd.es.com Wed Jun 3 06:43:44 1992
(K6X0)
...yes, Virginia, there is a real citizen's band between
160 and 190 KHz. The limitations are: one watt output power, and
the antenna can be no longer than 50 feet including the feedline.
There are some serious experimenters using the band for propagation
studies and so on, but there is lots of room for CW signals. You
may hear several beacons operating there 24 hours a day. There is
a newsletter, but I do not know who publishes it. Other than the
power and antenna restrictions, as far as I know anything goes.
To my knowledge there is no commercially made equipment available

for this band - virtually everyone builds their own transmitters,
and most of the modern receivers will tune down on that band. I
listen there once in a while with my TS-930 but have never been
interested in transmitting there. Good luck.

****

(KC6WUG)

...FCC part 15 (no license) 1750 meter band: 160-190 KHz. 1 watt max
input power. 15 meter maximum lenght of antenna + feedline. With
those power and antenna restrictions you don't get much range.

****

>From jkearman@arrl.org Fri Jun 5 07:55:06 1992
(KR1S) ^^^^
|------(AhHA! - So much for the benign neglect theory --
JRP)

JP: Well, shucks. We have run articles about this band in the past.
I guess we should do it again. The band runs from 160-190 kHz. You're
allowed 1-watt output, total length/height of antenna including
feed line is 50 ft (max allowed by law). Most folks put the xmtr
right at the base of the antenna.

You can join the Longwave Club of America, which was organized in
1974 to promote DXing and experimentation on frequencies below
550 kHz and activity on the 1750 meter band. Membership in the
LWCA and a one-year subscription to The LOWDOWN is $12.00 by
First Class Mail. Please make all remittances payable to the
Longwave Club, and mail to LWCA, 45 Wildflower Rd., Levittown,
PA 19057. [Direct quote from the LOWDOWN]

(See, we READ it here!)

The LOWDOWN is published monthly. Good luck and 73,

****

>From: pdh@netcom.com (Phil Howard)
(KA9WGN)

Depending on your effective bandwidth, you can extend it. I've read
about very slow digital going something like 1000 to 2000 km.

****

As promised, here's the summary of the information I requested
from the net a couple weeks ago regarding the 1750 meter band.

Does one need a license to operate on this band? No. This means that
you can choose your own callsign although callsigns are not required.

What is this band for? Experimentation mainly. It is especially fun to attempt QRP operation and one respondent said that given the right type of modulation and antenna setup, signals can travel 1000 miles or more with just under one watt output! Lots of folks use CW beacons and there is a radio club called The Lowfers (Low Frequency Users, presumedly). Be aware that this IS NOT a ham band although several LF receiver manufacturers boast that their units can "receive the 1750-meter ham band". You will not find discussion of this band in the ARRL publications BECAUSE it is not a ham band. Perhaps some of the confusion here arises from the use by LF operators of ham radio callsigns. Many hams also operate in this band and use their own calls for identification, even though, as mentioned above, a callsign is not required here.

What is the frequency limits of this band? The 1750 meter band spans from 160 to 190 KHz.

What types of modulation may be employed? You may use CW and AM voice. You may be allowed others (FM, RTTY, etc). But the data I was able to gether was sketchy on this point. One person though said that there are no restrictions on modulation methods.

What are the legal power limits and other transmitter-related restrictions? Transmitter power is limited to somewhat less than one watt output. The maximum power INPUT to the final should not exceed one watt. The length of the antenna added to the length of the feedline MAY NOT exceed 50 feet. Spurious emissions outside the band must be 60db below the signal strength at the carrier frequency.

Who may use the band? Anyone, so long as they comply with the above regulations.

Where can I get more definitive and detailed information on this band? The band is discussed in Part 15 of the Code of Federal Regulations which you can pick up at your local library (assuming it is a fairly big library),
or you can order it from the nearest US Government Bookstore. If anyone knows where such a store is, please post its location. I'd like to snag a copy of Part 15 myself.

Thanks to alan@dsd.es.com, kludge@grissom.larc.nasa.gov, kc2wz!bob%fdurt1@uunet.UU.NET, brown@hpspkla.spk.hp.com, markz@ssc.wa.com, and gary@ke4zv.uucp for all the information they provided.

Happy Lowfering! :-)

SB SPCL ARL ARLX032
ARLX032 New 5760 MHz record

A new over-land distance record has been reported on the 5760 MHz amateur band. On November 12, Al Ward, WB5LUA in Allen, Texas, and Ron Stefanskie, W9ZIH in Malta, Illinois, worked over a 738 mile path. The previous over-land record was 614 miles, set by N6CA and XE2/N6XQ.

Writing in the North Texas Microwave Society "Feed Point," Ward reports working W9ZIH on the evening of November 11, on 432 MHz with S-9 signals. Those two then tried unsuccessfully to work on 5760 MHz, having previously worked each other on the bands in between. They tried that night and the following morning.

In cooperation with Greg McIntire, AA5C, and W9ZIH, the first record breaking contact took place, between WB5LUA and Roger Schneider, WB9OJR, of Green Valley, Illinois, who had joined the effort. The distance was 633 miles. AA5C and WB9OJR also connected, at 630 miles.

Continuing the effort, about three hours later, at 1652 UTC, WB5LUA and W9ZIH made the 738-mile contact, and AA5C worked W9ZIH, at 733 miles. All contacts were on 2-way CW.

Al Ward said "It is really nice to know there are people active on the microwave bands who are ready to go when the bands open, and also to know that our equipment, which has only worked out to 250 miles under normal conditions, can actually work when the band opens up."

ARLP051 Propagation de KT7H

ZCZC AP65
QST de W1AW
Propagation Forecast Bulletin 51 ARLP051
From Tad Cook, KT7H
Seattle, WA December 9, 1994
To all radio amateurs

SB PROP ARL ARLP051
ARLP051 Propagation de KT7H

Average solar flux was exactly the same last week as the week prior. Values hovered around 80. The one day with active geomagnetic conditions was December 2 when the A index was 20 and the K index rose as high as five.

The solar flux is expected to stay right around 80 for the rest of December. There may be a slight dip around mid month, but otherwise there should be little change. Geomagnetic conditions may be unsettled around December 17, and active to storm levels around December 23, remaining unsettled to active through December 29.

Sunspot Numbers for December 1 through 7 were 15, 12, 11, 14, 14, 16 and 28, with a mean of 15.7. 10.7 cm flux was 79.1, 79.1, 81.8, 81.9, 80.7, 78.5 and 80.1, with a mean of 80.2.

The path projection for this week is from Minneapolis to Malta.

80 meters should be open from 2130 to 0700z, and 40 meters from 2000 to 2330 and again from 0300 to 0800. On some days 40 meters may be open through the period from 2330 to 0300. 30 meters looks good from 1500 to 1830 and again from 0530 to 0800. Check 20 meters from 1430 to 1800 and 17 meters from 1530 to 1700. 15 meters might be open on some days around 1600, but the ham bands above 21 MHz do not look promising over this path.

Earlier as part of the thread about the NYC Marathon, someone stated that the requirements for station identification permitted identifying at a different power level and at *any* location in the band (i.e., not at the same power as your earlier transmissions and not necessarily on the same frequency as those earlier transmissions).

I've been browsing part 97 and it does indeed seem to be silent about the power levels. However, I can't find the justification for "anywhere in the band" in 97.119 (it referes to "transmitting channel"). This is an honest question. I'd really like to know if it is a legal ID somewhere else in the same band as that would be very helpful to use in many situations.

Can anyone shed light?

Hi- just a few thoughts on rfi in general and telephone interference in particular. Several years ago(when i was of limited intelligence) i used to run a rather large amp(a pair of 4-1000a`s) on 80 thru 10. However, even when using this amp in totally legal service I experiencedd telephone and Tv interference.After much nashing of teeth and pulling of hair I came to several conclusions. I`ll share these with you today!
1. The telephone and other interference may be symptomatic of other elements in the system(wires in the attic or other telephone instruments). The key here is to reduce the offended system to its minimun configuration i.e. 1 phone and its associated wires. Work on getting the single phone problem solved prior to working with other instruments hung on the system as you are trying to solve multiple issues at one time that way. For example- with a single phone on the line you know that when its solved, you have a known good starting point. However, if you attempt to troubleshoot a system with several instruments on the line you cannot tell where or which instrument is the offending one. Each phone must be treated as a single problem area.
2. The same is true for video difficulties. When running an amp or on 75 meters one can expect interference with vcr`s in the circuit. If you remove the vcr chances are your interference will go away.(remember- only one video system at a time)! Choke out the rfi riding the shield of the coax (most homes are wired to accomodate multiple tv outlets and therefore are great antenna systems). My solution was a 10 foot tv extension cable wound with 3 ea. of a ferrite rod material from amidon (choke solonoid wound on the rod) and then all taped together. After this cluge was hung on the back of the vcr I could run anywhere with no tvi! I hope these thoughts help you.

Many thanks to the folks who responded both here and by email. I got a lot of good advice, which included contacting a friendly local ham operater or radio group. Has anyone got a clue as to how I would find such a person/group in Farmington Hills, Michigan?

Again, thanks.
John

>
> And there's plenty of channels available at VHF.

1. There are only a few dGPS receivers at present, although many more will be soon available Existing units definitely will not tune the 435-495 kHz band without modification. Such a modification would be fairly expensive as an add-on, but would be a cheap addition to a new design. You need to contact the manufacturers themselves to determine just how feasible this would be.

There are several excellent reasons for NOT using VHF for dGPS transmission.

first of all there are NOT "plenty of channels available at VHF". VHF at present is very crowded and getting more crowded by the day. second, VHF is limited to line-of-sight transmission, whereas the MF band being used for dGPS is capable of reception at distances of a hundred miles or more, allowing coverage with fewer transmitters. And existing MF receivers or existing VHF receivers will be of little use in receiving the dGPS signals, because of the type of modulation being used.

md_hill@CAM.ORG (Mark Hillier) wrote:

Note that this does not mean that because you hold a
license in either country that you can exchange it for
an equivalent level in the other...there is NO recip-
rocal licensing agreement.

However, local officials of Industry Canada (the government department currently overseeing Canadian amateur radio) do have discretionary power to waive portions of the licensing examination for holders of non-Canadian licences who wish to become licensed in Canada.

For example, when I (the holder of a US Advanced ticket) moved here from the US two years ago and applied for a Canadian amateur licence, I was given credit for the Advanced and 12 WPM endorsements, and the only exam I had to pass was a 26-question portion of the Basic exam dealing with Canadian amateur bands and operating rules.

I may be taking a cruise this summer and wonder if anyone has
experience working HF on a cruise ship. Also wonder about the
licensing regulations. We would be in US and Canadian waters.
Even though the ship is US built and operated, it has
foreign registry (Liberia), evidently a common practice.
Does the ship registry factor into things at all? I think that
the licensing agreement with Canada should let me work HF in their
waters but I don't know if ship registration comes into play here.
(I suppose I have to check with the captain before putting up
the 40 meter beam. :-) If anyone has some hints abut this
please let me know.

Thanks & 73, Dale.

The front panel comes off with four screws. But make sure you have removed the tuning dial first. There is one or two screws under there as well. The buttons are small surface mounted types I beleive. They should just be changed for new ones. I think they cost about $3.00 each. here on the west coast Kenwood Parts are at 800-536-9663.

: Well, IMO, I'd keep MY fourteen-year-old daugher away from CB.
: Actually, I only have a 5-yr-old son. But if the CB chatter I've
: heard on my HF gear (which receives 27 MHz) is any indication,
: her young female voice will INSTANTLY be recognized. As such,
: the perverted comments and harassment will soon follow.

Well, around here there seems to be a number of high school (or early college) aged folks who congregate on CB channel 5 in the evenings. From the sound of it (I haven't listened to them much), it all seems rather tame. With the sunspots currently taking a nap there isn't nearly as much of the microphone screaming from long distances that there was a few years ago. Still, when the band opens up, it's still out there. (Side note: If you ever want an "early warning system" for 10 meters, hook an S-meter to CB channel 19.)

Having said that, I'd be careful to monitor what was going on for a bit just to make sure. Your mileage will depend on your local environment.

: You said "a few miles away". How far and is it line-of-sight?
: GMRS UHF handhelds might do the job just fine. This may
: encourage the HAM radio use without exposing her to the
: CB nightmare. Radio Shack has some relatively inexpensive
: (to amateur HTs) GMRS handhelds. It's even legal (up to a
: point) to install a GMRS antenna other than the rubber duck.

I believe the "fine print" in the GMRS license limits usage to members of the same family, or some such thing to make it useless.

Have you tried morse code with the bedroom lights? :-)

Greg.

In response to the reply Phillip Peake, I have a comment regarding
his suggestions about calling the FBI etc. ..First, the
violation of FCC regulations is not normally enforced by the FBI.
They deal with Federal offenses that are in the criminal and felony
arena. The enforcement arm of the FCC is usually when police action
is required is the US Marshalls office. The FCC is the chain of command
for violations of part 97. The local police have no expertise in
determining if a crime has been committed in this case. Police deal in
criminal matters and not FCC rule violations.

If this guy is broadcasting matters pertaining to amateur radio
no matter how you might disagree with the content, he (K1MAN)
is most likely not violating any FCC rule(s). Before you go off
and make a fool of yourself, I'd suggest to the original writer
to determine if a violation has been committed. Remember, the
First ammendment permits freedom of speech, even if the topic
is related to ham radio.

3904. HT Antenna

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-09 21:53:53 UTC
From: wiseman@groucho.mrc.unm.edu
Message-ID: <3cajlh$8u4@lynx.unm.edu>
Source record: 255353

I am looking for an antenna for my HT. It needs to be a 2m/70cm antenna and it should be telescoping. The final kicker is I would like it to be able to transmit in both the fully extended and in the collapsed positions. So far, all I have found are dual band antennas that will transmit in the extended position only. Can anyone suggest an antenna for me?

Thank you.

Don Wiseman (KC5KEC)

3906. Re: PGP on packet

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-09 21:56:34 UTC
From: dbushong@wang.com
Message-ID: <D0KCyB.K2y@wang.com>
Source record: 255351

cybrchrs@vllyoak.resun.com (Tom wolfe) writes:

>I am wondering about how the regs apply to using PGP on messsages
>that go out on packet. It seems that various encoding schemes are
>practiced for sending GIFs and binaries, so I was wondering if PGP
>is okay also.

This is one of those times where there is no gray area: it is a
violation:

97.113 Prohibited transmissions.

(a) No amateur station shall transmit:

[...]

(4) Music using a phone emission except as specifically provided
elsewhere in this Section; Communications intended to facilitate a
criminal act; Messages in codes or ciphers intended to obscure the
meaning thereof, except as otherwise provided herein; Obscene or
indecent words or language; or false or deceptive messages, signals,
or identification;

[end quote]

The intent of PGP is to obscure the meaning of the message, i.e., to
get some "privacy", which is something you can't expect on ham radio.

73,
Dave

3907. Re: 6 meter FM

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-09 22:12:06 UTC
From: billsohl@earth.planet.net
Message-ID: <3caknm$dco@jupiter.planet.net>
Source record: 255352

Brady Palmquist (bgpalmq@moto.net.nwa.com) wrote:
: I'd be curious to hear from folks running 6 meter FM. What kind of
: equipment are you using? Are you using repeaters or simplex? How's does
: range compare to 2 meters or 10 meters in 'real life' scenarios?

I operate some 6m FM, mostly repeater and minimal simplex (FM that is).
I have the Kenwood TS-690...great rig, essentially the TS-450 with
full receive through 60MHz and 6m 50w all mode transmit capability.
Considering the couple of hundred bucks additional cost, if you're
buying an HF rig and you want 6m too, you couldn't buy a separate
6m all mode with as much functionality for the price difference
between the TS450 and TS-690.

As to range, I'd say it's about the same, but since there aren't
as many 6m repeaters in locations as well suited as many 2m
repeaters its a tough call.

: If you happen to operate or know about repeaters that are on the air,
: what kind of equipment are the repeaters comprised of, how are you getting
: the needed separation (dual-sites, duplexers, dual antennas)?

Don't have any equipment specifics, but many of the 6m repeaters
around here are linked to 440 machines also.

: I haven't been on 6 FM for over 15 years and will be getting back on
: this winter with a radio that will be far better than my 1950 vintage
: RCA dynamotor rig......

6m is a great band, unpredictable yet stable enough for solid
local QSOs given a moderate amount of power and directional
antennas. With the greater reliance on cable TV reception
today, many folks that migt have had TVI problems in the past might
find less or no problems to deal with today.

3909. plusv3d1.zip/plusv3d2.zip - Hams: KD7P LogPlus v3.03. DEMO

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-09 23:14:56 UTC
From: reisert@eng.pko.dec.com
Message-ID: <9412092314.kp2766@SimTel.Coast.NET>
Source record: 255356
Cross-posted to: comp.archives.msdos.announce,rec.radio.info,rec.radio.amateur.misc

I have uploaded to SimTel, the Coast to Coast Software Repository (tm),
(available by anonymous ftp from the primary mirror site OAK.Oakland.Edu
and its mirrors):

SimTel/msdos/hamradio/
plusv3d1.zip Hams: KD7P LogPlus v3.03. DEMO. (1 of 2)
plusv3d2.zip Hams: KD7P LogPlus v3.03. DEMO. (2 of 2)

LogPlus v3.03 is a full-featured logging program. In addition to HF,
VHF and Satellite logging functions (both on and off-air, with and
without PacketCluster (tm) display enabled), it has awards tracking,
radio control, QSL management, including a QSL manager database, and
hooks for HAMBase, SAM, BuckMaster and QRZ CDROM, and several
user-defined external programs (i.e. GeoClock). The program can
import logs from the most recent versions of CT, NA, WF1B and N6TR
logging programs. There are also conversions from other popular
logging programs.

The awards module keeps track of DXCC, WAZ, WAS, WPX, WARO (Worked all
Russian Oblasts), IOTA (Islands on the Air), VUCC, US Counties, and
user-defined award types. Browsers give you instant access to all your
QSOs and award status. Modifying databases is easy, for example, to add
new countries or new prefix mappings.

The demo runs on 80286 machines and above. This version has all the
features of the full program, except that it limits the logbook to 50
QSOs.

The author (Bob Winters KD7P) is very receptive to suggestions and
is responsive to bug reports. He can be reached on Internet at
kd7p@seanet.com.

Really. A 450 kHz receiver is chump change. A more serious concern
is RFI suppression of the boat's motor and electrics.

Source record: 255358

:Of course hams should offer their (limited) services, like any othe
:good citizen. But it is *very* poor public policy to *rely* upon
:them as we might rely upon a sworn, paid emergency worker.

You must be one of those people who assumes everything works, with
little idea how. I suggest you talk to some local Emergency Management
people and find out how they do things. MOST disaster relief workers
are volunteers. You don't have the kind of money it would take to
pay the taxes that would be required to maintain a "standing army"
to cope with infrequent emergencies. Even something like a plane crash
or large auto accidents require the support of volunteers. Yes, those
volunteers are trained. So are a lot of amateur radio volunteers.

Doubtless the role of the ham volunteer is changing, but it remains
true that cell phones can jam up or fail in regional disasters,
some kinds of communication traffic can't be efficiently handled by
other means, and amateurs are needed for contingencies.

Doppler radar is a great invention, but the weather people still need
ground truth. A meteorolgist 90 miles away can't tell whether the hail
is 1/4" or 1". There is a big difference. The NWS really will need us
more. Also, I have heard skywarn volunteers give NWS personel very
detailed on-site damage assesments that would otherwise require a
"paid professional".

I don't think you like volunteerism, and don't know how much of this
country's greatness depends on it. Think of the countless volunteer
fire departments who serve with distinction. Granted most hams don't
have that kind of training, but we do have a role to play.

This article was posted to rec.radio.amateur.policy early in 1994. Given how far Steinbrecher and Qualcomm have gone since then, I figured I'd repost it. I am not the person who posted it initially. I regret that I do not remember his name. Whoever you are, thanks again.

****

[Auctioning the Airways, part 1 of 3]

The following article, AUCTIONING THE AIRWAVES, was first published in Forbes ASAP, April 11, 1994. It is the seventh article in a series excerpted from chapters in George Gilder's book, Telecosm, which will be published 1995 by Simon & Schuster, as a sequel to Microcosm, published in 1989 and Life After Television, published by Norton in 1992. Further chapters of Telecosm are scheduled to be published in future issues of Forbes ASAP.

Please post Auctioning The Airwaves to
any Usenet newsgroups deemed suitable.

AUCTIONING THE AIRWAYS

BY

GEORGE GILDER

Imagine it is 1971 and you are chair of the new Federal Computer Commission. This commission has been established to regulate the natural monopoly of computer technology as summed up in the famous Grosch's Law. In 1956 IBM engineer Herbert Grosch proved that computer power rises by the square of its cost and thus necessarily gravitates to the most costly machines. According to a famous IBM projection, the entire world could use some 55 mainframes, time-sharing from dumb terminals and keypunch machines. The owners of these machines would rule the world of information in an ascendant information age. By the Orwellian dawn of 1984, Big Bre'r IBM would establish a new digital tyranny, with a new elite of the data-rich dominating the data-poor.

As head of the computer commission, you launch a bold program to forestall this grim outcome. Under a congressional mandate to promote competition for IBM and ensure the principle of universal computer service, you ordain the creation of some 2,500 mainframe licenses to be auctioned to the highest bidders (with special licenses reserved for minorities, women and farmers). To ensure widespread competition across all of America, you establish seven licenses in each metropolitan Major Trading Area and seven in every rural Basic Trading Area as defined by Rand McNally. To guarantee universal service, you mandate the free distribution of keypunch machines to

all businesses and households so that they can access the local computer centers.

In establishing this auction in 1971, you had no reason at all to notice that a tiny company in Mountain View, Calif., called Intel was about to announce three new technologies together with some hype about "a new era of integrated electronics." After all, these technologies--the microprocessor; erasable, programmable read-only memory (EPROM); and a one-kilobit dynamic random access memory (DRAM)--were far too primitive to even compare with IBM's massive machines.

The likely results of such a Federal Computer Commission policy are not merely matters of conjecture. France pretty much did it when it distributed free Minitel terminals to its citizens to provide them access to government mainframes. While the United States made personal computers nearly ubiquitous buying perhaps 100 million since the launch of the Minitel in the late 1970s the French chatted through central databases and ended up with one-quarter as many computers per capita as this country, and one-tenth the number of computer networks. Today, PC networks are leading the US economy to world dominance while Europe founders without a single major computer company, software firm or semiconductor manufacturer.

IT IS NOW 1994, and Reed Hundt, the new chairman of the Federal Communications Commission, is indeed about to hold an auction.

Rather than selling exclusive mainframe licenses, the current FCC is going to sell exclusive ten-year licenses to about 2,500 shards of the radio spectrum. Meanwhile, a tiny company called Steinbrecher Corp. of Burlington, Mass., is introducing the new microprocessor of the radio business.

In the world of radio waves ruled by the Federal Communications Commission, the Steinbrecher MiniCell is even more revolutionary than the microprocessor was in the world of computing. While Intel put an entire computer on a single chip, Steinbrecher has put an entire cellular base station--now requiring some 1,000 square feet and costing $ 1.5 million--in a box the size of a briefcase that costs $ 100,000 today. Based on a unique invention by Donald Steinbrecher and on the sweeping advance of computer technology, the MiniCell represents a far bigger leap forward beyond the current state of the art than the microprocessor did. What's more, this MiniCell is in fact much superior to existing cellular base stations. Unlike the 416 hard-wired radio transceivers (transmitter-receivers) in existing base stations, the MiniCell contains a single digital broadband radio and is fully programmable. It can accommodate scores of different kind of cellular handsets.

Most important, the MiniCell benefits from the same technology as the microprocessor. Making possible the creation of this broadband digital radio is the tidal onrush of Moore's Law. In an antithesis of Grosch's Law, Gordon Moore of Intel showed that the cost-effectiveness of microchip technology doubles every 18 months. This insight suggested the Law of the Microcosm--that computing power gravitates not to the costliest but to the cheapest machines. Costing $ 100,000 today, the MiniCell will predictably cost some

$10,000 before the turn of the century.

In time, these digital MiniCells will have an impact similar to that of the PC. They will drive the creation of a cornucopia of new mobile services--from plain old telephony to wireless video conferencing--based on ubiquitous client/server networks in the air. Endowing Americans with universal mobile access to information superhighways, these MiniCells can spearhead another generation of computer-led growth in the US economy. Eventually, the implications of Steinbrecher's machines and other major innovations in wireless will crash In on the legalistic scene of the FCC.

And that's only the beginning of the story.

Going on the block In May will be 160 megahertz (millions of cycles per second) of the radio frequency spectrum, divided into seven sections of between 10 and 30 megahertz In each of 543 areas of the country, and devoted to enhanced Personal Communications Services (PCS).

Existing cellular systems operate in a total spectrum space of 50 megahertz in two frequency bands near the 800 megahertz level. By contrast, PCS will take four times that space in a frequency band near two gigahertz (billions of cycles per second). Became higher frequencies allow use of lower-power radios with smaller antennas and longer-lasting batteries, PCS offers the possibility of a drastically improved wireless system. Unfortunately, the major obstacle to the promise of PCS is the auction.

Amid the spectrum fever aroused by the bidding, however, new radio technologies are emerging that devastate its most basic assumptions. At a time when the world is about to take to information superhighways In the sky--plied by low-powered, pollution-free computer phones--the FCC is in danger of building a legal infrastructure and protectionist program for information smokestacks and gas guzzlers.

Even the language used to describe the auction betrays its fallacies. With real estate imagery, analysts depict spectrum as "beachfront property" and the auction as a "land rash." They assume that radio frequencies are like analog telephone circuit: no two users can occupy the same spot of spectrum at the same time. Whether large 50-kilowatt broadcast stations booming Rush Limbaugh's voice across the nation or milliwatt cellular phones beaming love murmurs to a nearby base station, radio transmitters are assumed to be infectious, high-powered and blind. If one is on the highway, everyone else has to clear out. Both the prevailing wisdom and the entrenched technology dictate that every transmitter be quarantined in its own spectrum slot.

However, innovations from such companies as Steinbrecher and Qualcomm Inc. of San Diego overthrow this paradigm. Not only can numerous radios operate at non-interfering levels in the same frequency band, they can also see other users' signals and move to avoid them. In baseball jargon, the new radios can hit 'em where they ain't; in football idiom, they run for daylight. If appropriately handled, these technologies can render spectrum not scarce but abundant.

These developments make it retrograde to assign exclusive spectrum rights to anyone or to foster technologies that require exclusivity. Spectrum no longer shares any features of beachfront property. A wave would be a better analogy.

The New Rules Of Waves

In the early decades of this century, radio was king. Electronics hackers played in the waves with a variety of ham, citizens band and short-wave machines.

Experimenting with crystal sets, they innocently entered the domain of solid-state devices and acquired some of the skills that fueled the electronic revolution in the United States and the radar revolution that won World War II. The first point-contact transistor, created by John Bardeen and Walter Brattain at Bell Labs in 1948, functioned like a crystal radio. The first major solid-state product was a 1954 Texas Instruments pocket radio with six germanium transistors.

Over the following decades, the radio became a mass commodity. There are now some 230 million radios in the United States alone, not even including more than 16 million cellular phones (which are in fact portable two-way radios). Radios roll off Asian assembly lines at a rate that might be meaningfully measured in hertz (cycles per second), and they come in sizes fit for pockets, belts, watches and ears. But the romance of radio has died and given way to the romance of computers.

Today it is PC technology that engages the youthful energies previously invested in radio technology. The press trumpets a coming convergence between computers and TVs and games and films. But no one talks much about radios. For many years, we have been taking radios for granted.

As the foundation of wireless communications, however, radio--no less than TV or films--will burst into a new technoscape as a result of a convergence with computers. The hackers of the '50s and '60s are joining forces with the hackers of the '80s and '90s to create a new industry. Moore's Law is about to overran the world of radio.

You double anything every 18 months and pretty soon you find yourself with a monster. During the 1970s and 1980s, Moore's Law overturned the established order in the computer industry and spawned some 100 million personal computers that are as powerful as million-dollar mainframes were when the revolution began. In the current decade, Moore's Law is upending the telephone and television industries with interactive teleputers that will be able to send, receive, shape and store interactive full-motion video. And during the next five years, Moore's Law is going to transform exotic and costly radio equipment once consigned to the military and outer space into the basic communications access routes for the new world economy.

To understand this new world of radio, however, you must forget much of what you learned about the old world of radio. For example, these new radios differ radically from the radios of the past in the way they use spectrum, the way they interfere with one another and the way they are built.

For some 15 years, a hacker of the 1950s named Don Steinbrecher and a small group of students and associates have been making the world's most powerful and aerobatic radios. Steinbrecher radio gear can soar to spectrum altitudes as high as 94 gigahertz to provide radar "eyes" for smart bombs and pies, plunge down to the cellular band at 800 megahertz to listen in on phone calls or drop discretely to 30 megahertz--waves that bounce off the ionosphere--for remote over-the-horizon radar work identifying cocaine traffickers flying in low from Latin America. At the same time, some of these radios may soon command enough dynamic ranges of accurate broadband reception--rumored to be as high as 120 decibels (one trillion-to-one)--to detect a pin drop at a heavy-metal rock concert without missing a high-fidelity note or twang.

Like every radio transceiver, a Steinbrecher radio must have four key components: an antenna, a tuner, a modem and a mixer. The antenna part is easy; for many purposes, your metal shirt hanger will do the trick (backyard wire fences collect millions of frequencies). But without tuners, modems and mixers, nothing reaches its final destination--the human ear.

A tuner selects a desired carrier frequency, usually by exploiting the science of resonant circuits. A modem is a modulator-demodulator. In transmitting it applies information to the carrier frequency by wiggling the waves in a pattern, called a modulation scheme, such as AM or FM. In receiving the modem strips out (demodulates) the information tom the carrier wave.

The key to Steinbrecher radios is the broadband mixer. It surmounts what was long seen as an impossible challenge: moving a large array of the relatively high career frequencies on the antenna down to a so-called baseband level where they can be used without losing any of the information or adding spurious information in the process. Compared to FM carrier frequencies of 100 megahertz or even PCS frequencies of two gigahertz, baseband audio frequencies run between 20 hertz and 20 kilohertz.

Mixers were the basic Steinbrecher product, and in 1978 and 1980, Steinbrecher acquired patents on a unique broadband mixer with high range and sensitivity called the Paramixer. Even to its expected military customers, the Paramixer was a hard sell because other radio components were unable to keep pace with its performance. Today, however, the Paramixer is the foundation of the Steinbrecher radio in the MiniCell.

In the old world of radio, transceivers integrated all of these components--antenna, tuner, modem and mixer--into one analog hardware system. Because the radio is analog and hard-wired, its functions must be standardized. Each radio can receive or transmit only a very limited set of frequencies bearing information coded in a specific modulation scheme and exclusively occupying a specific spectrum space at a particular power range. If you are in the radio business--whether as an equipment manufacturer such as Motorola or Ericsson, a provider of services, such as McCaw or Comsat, or a broadcaster, such as NBC or Turner--you care deeply about these hard-wired specifications, frequencies and modulation schemes.

Comprising the "air standard," these issues embroil businesses, politicians, standards bodies and regulators in constant warfare. For everything from High Definition Television to digital cellular and cordless telephony, standards bodies are wrangling over frequencies and modulation schemes.

[Auctioning the Airways, part 2 of 3]

How Digital Radios Can End The Spectrum Wars

To the people at Steinbrecher Corp., all these wrangles seem utterly unnecessary. With antennas, tuners, modems and mixers, wideband digital radios perform all the same functions as ordinary radios. Only the antenna and mixer are in hardware, and these are generic; they don't care any more about air standards than your shirt hanger does.

In Steinbrecher radios, all of the frequency tuning, all of the modulating and demodulating, all of the channelization, all of the coding and decoding that so embroil the politicians are performed by programmable digital signal processors and can be changed at a base station in real time. Strictly speaking, the tuner and modem are not part of the base station radio at all. The broadband radio in a Steinbrecher base station can send or receive signals to or from any handset or mobile unit operating within its bandwidth (in current cellular systems the full 12.5 megahertz of the band; in PCS, still larger bands of as much as 30 megahertz).

All the processing of codes, frequencies, channels and modulations, as well as all special mobile services, can move onto computers attached to the network. Steinbrecher technology thus can open up the spectrum for open and programmable client/server systems like those that now dominate the computer industry. Moore's Law, in fact, is changing radios into portable digital computers. The most pervasive personal computer of the next decade will be a digital cellular phone operating at least 40 MIPS (millions of instructions per second).

Today the performance of analog-to-digital converters defines the limits of Steinbrecher radios. Even if the mixers are perfect, the system's performance can be no better than the accuracy of the A/D processors that transform the output of the mixers into a digital bit stream for the DSPs. Steinbrecher estimates that better broadband A/D converters--which can sample wave forms more accurately at high frequencies--could increase the performance ofSteinbrecher systems by an amazing factor of 10. Pushed by demands and designs from Steinbrecher, Analog Devices and other suppliers are advancing converter technology nearly at a pace with Moore's Law, and Steinbrecher's broadband digital radios are rapidly approaching the ideal.

As Don Steinbrecher puts it, broadband A/D and DSP have changed wireless "turn a radio business to a computer business." At first, the computer portion of a broadband radio was very expensive. Until the early 1980s, military customers performed advanced broadband analog-to-digital conversion and digital signal processing on million-dollar custom supercomputers. In 1986, an advanced DSP system for graphics at Bell Labs

entailed the use of 82 AT&T DSP32 chips and supporting devices in a custom computer that cost some $ 130,000. Today, these same functions are performed on an Apple Quadra 84o AV using an AT&T 3210 running at 33 megaflops (million floating-point operations per second) and 17 MIPS for under $ 20 in volume. This rising tide of advances in digital technology, propelled by Moore's Law, is about to sweep Steinbrecher's recondite radio company into the midst of a mass market in cellular telephony.

And the entire cellular and PCS industries will be beating a path to Steinbrecher's door. Just as millions of people today have learned the meaning of MIPS and megabytes, millions of people around the world, believe it or not, are going to come to understand the meaning of "spurious-free dynamic range."

As a very rough analogy, imagine cranking the volume of your radio as high as possible without marring the desired signal with static and distortion. The spurious-free dynamic range of your radio would measure the distance between the lowest and the highest volumes with a clear signal. In more technical terms, spurious-free dynamic range is defined as the range of signal amplitudes that can simultaneously be processed without distortion or be resolved by a receiver without the emergence of spurious signals above the noise floor.

In building broadband radios with high dynamic range, however, Steinbrecher faced a fundamental technical problem. As a general rule, bandwidth is inversely proportional to dynamic range. You can have one or the other, but you can't have both. The broader the band, the more difficult it is to capture all of its contents with full accuracy and sensitivity or with full spurious-free dynamic range. An ordinary radio may command a high dynamic range of volumes because it is narrowband.

But Steinbrecher radio does not begin by tuning to one frequency alone; it gasps every frequency in a particular swath of spectrum. In some extreme Paramixer applications (94-gigahertz radar, for example), the bandwidth could be 10 gigahertz--larger than the entire range of spectrum commonly used in the air, from submarine communications at 60 hertz to C band satellite at 6 gigahertz.

In most Steinbrecher applications that require high dynamic range, however, the bandwidth runs between a few megahertz and hundreds of megahertz (compared to 30 kilohertz in a cellular phone). Unless all of the frequencies captured by the broadband radio are really present in the band rather than as artifacts of the equipment--in technical jargon, unless the signals are spurious-free--the radio user cannot tell what is going on, cannot distinguish between spurs and signals.

Steinbrecher has devoted much of his career to the graft of spurious-free dynamic range. Soon after he arrived at Massachusetts Institute of Technology in September 1961 to pursue work on device physics, he moved into the school's new Radio Astronomy Lab. The radio astronomers were using millimeter waves at 75 gigahertz to probe remote galaxies and pour through evidence of a big bang at the beginning of time. Because the

return reflections from outer space were infinitesimal, the radio telescopes had to command a bandwidth of at least two gigahertz, a spurious-free dynamic range of more than 100 decibels (tens of billions-, or even trillions-to-one) and noise levels of less than 10 decibels (millionths of a watt).

The telescope signals turned out not to be spurious-free. More than 90 percent of the receiver noise--the spurious signals--originated in the frequency converter or mixer, which translated the 75-gigahertz millimeter waves in cascading analog stages of diodes and transistors, fed by tunable local oscillators, down to baseband levels that could be usefully analyzed. This impelled Steinbrecher's obsession with spurious-free dynamic range in mixers.

To achieve high dynamic range in broadband mixers, Steinbrecher discovered, was chiefly a problem of the basic physics of diodes. At the University of Florida, at ECI Corp. and at MIT, Steinbrecher had pursued studies in device physics focusing on the theory of PIN junctions--the positive-negative interfaces that create the active regions in diodes and transistors. How cleanly and abruptly they switch from on to off--how fully these switches avoid transitional effects--determines how well they can translate one frequency to another without spurs.

From this experience, Steinbrecher concluded in 1968 that receivers could be built with at least a thousand times more dynamic range than was currently believed possible. He assigned his student Robert Snyder to investigate the issue mathematically, integrating the possible performance of each component into the performance of a mixer. Snyder's results stunningly continued Steinbrecher's hypothesis. They predicted that in principle--with unlimited time and effort--the linearity and dynamic range of a radio could be improved to any arbitrary standard. In a key invention, Steinbrecher figured out how to create a diode circuit that could produce a perfect square wave, creating a diode with essentially zero switching time.

Steinbrecher then proceeded to put his theory into practice by developing the crucial diode and field-effect transistor arrays, mixers, amplifiers and other components necessary to build a working system of unparalleled dynamic range. Most of their advances required detailed knowledge of the behavior of P/N junctions. To this day, the performance of Steinbrecher's equipment depends on adjustment to unexpected nonlinearities and noise sources that were discovered as part of Robert Snyder's work but are still not integrated into the prevailing models of diode behavior.

Beyond radio astronomy, the people who were interested in analyzing signals of unknown frequencies, rather than tuning into preset frequencies, were in the field of military intelligence. Enemies did not normally announce in advance the frequencies they planned to use or how they would modulate them. Steinbrecher Corp.'s first major contract came in the early 1980s for remote over-the-horizon radar (ROTHR) systems used to detect planes carrying drugs from Latin America. Steinbrecher also won contracts to supply MILSTAR satellite transceivers and 94-gigahertz "eyes" for smart munitions and jet aircraft.

In 1986 these large potential businesses began to attract venture capitalists, including EG&G venture partners, The Venture Capital Fund of New England and Raytheon. As often happens, the venture capitalists sought professional management. They pushed Steinbrecher upstairs to chairman and summoned a Stanford EE graduate named Douglas Shute to manage the company's move from a manufacturer of hard-sell mixers Into a producer of revolutionary digital radios.

Still, Steinbrecher Corp. long remained a tiny firm occupying a dingy one-story building in a Woburn, Mass., industrial park, where it rarely pulled in more than $ 5 million in revenues. Not until the early 1990s, when its technology converged with Moore's Law, did the company begin to escape its niche.

[Auctioning the Airways, part 3 of 3]

Collision With Texas Instruments' DSP

Indeed, strictly speaking even Moore's Law was not enough to make this Pentagon turkey fly. Crucial was Texas Instruments' mid-1980s campaign to remake the digital signal processor into a commodity device comparable to Intel's microprocessor. Creating development systems and software tools, TI transformed the DSP from an exotic and expensive printed circuit board full of integrated circuits into a single programmable microchip manufactured in volume on the same factory floor the company used to produce hundreds of millions of dynamic random access memories. The results exceeded all expectations. Outpacing Moore's Law by a factor of nearly four for some eight years so far, DSP cost-effectiveness began soaring tenfold every two years. Pricing the devices for digital radios, Douglas Shute saw that the wideband digital radio had "moved onto the map as a commercial product."

Also in 1989, a secret contractor asked the company if its radios could snoop on calls in the cellular band. After gigahertz explorations in radio astronomy and military projects, the 12.5 megahertz of the cellular bandwidth seemed a piece of cake. Although this national security application never came through, the idea galvanized the company. If it should need a commercial market, cellular telephony was a good bet.

The pull of opportunity, however, is usually less potent than the push of catastrophe--which is the key reason for socialism's failure. Insulating the economy from failure, it also removes a key spur for success. For all the bureaucratic rigmarole of military procurement, producers for the Pentagon live in a relatively comfortable socialist world of cost plus contracts.

In 1989, however, just before the fall of the Soviet Union, Steinbrecher began to get clear signals from Washington that the market for his products was about to collapse. MILSTAR remained an experimental program; the ROTHR system was halted after the creation of just four stations with 1,600 mixers; and suddenly the cellular opportunity was not merely an attractive option--it was crucial for survival.

When Shute and Steinbrecher viewed the cellular scene in the United States, however, they became increasingly disdainful. These radio companies had no more idea of what was possible in radio technology than had the MIT engineering lab when he arrived in 1961. Indeed, Steinbrecher Corp.'s first potential customer--a wireless colossus--refused even to meet with Shute: The chief technologist said he had investigated digital radios several years before and determined they were unable to achieve the requisite dynamic range. Moreover, at scores of thousands of dollars apiece, digital signal

processors were far too expensive. Most cellular executives, along with their Washington regulators, seemed stuck in a 1970s time warp when analog still ruled and DSP was a supercomputer.

Importing Obsolescence

As a result, the entire industry was convulsed by what Shute and Steinbrecher saw as a retrograde war over standards. Because Europe in general lagged far behind the United States in adopting analog cellular technology, the EEC had sponsored a multinational drive to leapfrog the United States by adopting a digital standard, which could then be exported to America. The standard they chose was called GSM (global services mobile), a time-division multiple-access (TDMA) scheme that exceeded analog capacity by breaking each channel into three digital time slots. Racing to catch up, the American industry adopted a similar TDMA approach that also increased the current system's capacity by a factor of three. With McCaw Cellular in the lead, American firms quickly committed themselves to deploy TDMA as soon as possible.

Then in 1991, Qualcomm unleashed a bombshell Exploiting the increasing power of DSPs to process digital codes, the company demonstrated a spread-spectrum, code-division multiple-access (CDMA) modulation scheme that not only increased capacity some twentyfold over analog but also allowed use of the entire 11.5 megahertz of the cellular bandwidth in every cell. To prevent interference between adjoining cells, analog and TDMA systems could use a frequency in only one cell out of seven.

Much of the industry seemed paralyzed by fear of choosing the wrong system. To Shute and Steinbrecher, however, these fears seemed entirely reckless. Using wideband digital radios, companies could accommodate any array of frequencies and modulation schemes they desired TDMA, CDMA, voice, data and eventually even video. Shute resolved to adapt Steinbrecher's advanced radio technology to these new markets. In mid-1991, Shute rushed ahead with a program to create a prototype cellular transceiver that could process all 12.5 megahertz of the cellular bandwidth and convert it to a digital bit stream.

The first major customer for the radios turned out to be ADC-Kentrox, a designer of analog cell extenders designed to overcome "dead zones" caused by large buildings in urban areas. This system was limited in reach to the few hundred meters the signals could be sent over analog wires without deterioration. By converting the signals to digital at the remote site, the Steinbrecher radio extended this distance from hundreds of meters to scores of kilometers and allowed the price of the product to remain at $ 100,000.

But these gains concealed the potential impact and meaning of the Steinbrecher technology. Once again, the Steinbrecher radios are being used to complement the existing system rather than overthrow it. In a similar way, McCaw plans to buy some $ 30 million worth of Steinbrecher machines to carry through its cellular digital packet data (CDPD) network. To be provided to 95 percent of McCaw's regions by the end of 1995, CDPD is a data overlay of the existing cellular system, which allows users of the current

analog system to send digital data at a rate of 19.2 kilobits per second, compared to the 9.6-kilobit-per-second rate offered by most modems over twisted-pair wires.

The Steinbrecher radio can survey any existing swath of spectrum in real time and determine almost instantly which channels are in use and which are free. It is this capability that convinced McCaw to buy Steinbrecher data cells despite the commitment of McCaw's putative owner, AT&T, to sell narrowband units made by Cirrus Logics' subsidiary Pacific Communications Sciences Inc. (PCSI), which have to scan through channels one at a time. McCaw is using the Steinbrecher radios as sniffers that constantly survey the cellular band and direct data bursts to those channels that are not being used at a particular time.

Indeed, the immediate needs of the marketplace alone justify the adoption of Steinbrecher data cells. With modems and antennas increasingly available and even moving sometime next year to PCMCIA slots the size of a credit card, demand for wireless data is likely to soar.

PCSI is now shipping a quintuple-threat communicator that fits into the floppy bay of an advanced IBM ThinkPad notebook or an Apple PowerBook, enabling them to send and receive faxes, make wireless or wire-line phone calls, dispatch data files across the existing cellular network or send CDPD packets at 19.2 kilobits per second. Speech recognition capabilities from IBM and Dragon Systems will come next year to personal digital assistants, permitting them to read or receive E-mail by voice. Although the first Newtons and Zoomers have disappointed their sponsors, the market will ignite over the next two years as vendors adopt the essential form factor of a digital cellular phone with computer functions rather than providing a kluge computer with a vaporware phone.

Nonetheless, McCaw has more on its mind with Steinbrecher than merely gaining a second source for CDPD sniffers. By simultaneously purchasing some 10 percent of the company and putting chief technical officer Nicholas Kauser on the Steinbrecher board, McCaw is signaling not a tactical move but a major strategic thrust. The Steinbrecher rollout in fact represents McCaw's stealth deployment of broadband digital capability.

Today the rival CDPD equipment from PCSI, Hughes and AT&T all can be made to perform CDPD communications as an overly to the existing cellular phone system. However, only the Steinbrecher systems can be upgraded to perform all of the functions of a base station and more, for voice, data and video. Only Steinbrecher allows the replacement of 416 radio transceivers, one for each channel, with one broadband radio and some digital signal processing chips. Only Steinbrecher can replace a $ 1.5 million, 1,000 square foot cellular base station with a box the size of a briefcase costing some $ 100,000 but, thanks to Moore's Law, racing toward $ 10,000.

It remains to be seen only whether McCaw will have the guts to follow through on this initiative by completely rebuilding its network to accommodate the wideband radio being installed at its heart. Self-cannibalization is the rule of success in information technology. Intel

and Microsoft, for example, lead the way in constantly attacking their own products. But this mode of life is deeply alien to the telephone business--even an entrepreneurial outfit like McCaw.

With new software and a simple upgrade to a MiniCell, the Steinbrecher DataCell will allow the McCaw system to handle all modulation schemes simultaneously--AMPS, TDMA, CDMA and future methods such as Orthogonal Frequency Division Multiple Access--obviating the need for hybrid phones. The multiprotocol and aerobatic capabilities of broadband digital radios could enable McCaw to roll out a cornucopia of PCS services--for everything from monitoring vending machines or remote power stations to tracking tracks and packages, and linking laptops and PDAs--while the rest of the industry is still paralyzed by wrangles over incumbent users, regulatory procedures, frequency access and radio standards.

Making channel sizes a variable rather than a fixed function of radios, Steinbrecher systems offer the possibility of bandwidth on demand. They could open up the entire spectrum as one gigantic broadband pipe into which we would be able to insert packets in any empty space--dark fiber in the air.

So Stop The Auction

So what does this have to do with the impending spectrum auction? Almost everything. Strictly speaking, the FCC is leasing 10 year exclusive rights to radiate electromagnetic waves at certain frequencies to deliver PCS. This entire auction concept is tied to thousands of exclusive frequency licenses. It has no place for broadband radios that treat all frequencies alike and offer bandwidth on demand. It has no place for modulation schemes that do not need exclusive spectrum space. Continuing to use interference standards based on analog transmissions that are affected by every passing spray of radiation, FCC rules fail to grasp the far more robust nature of digital on-off codes with error correction. By the time the FCC gets around to selling its 1,500 shards of air, the air will have been radically changed by new technology.

The FCC is fostering a real estate paradigm for the spectrum. You buy or lease spectrum as you would a spread of land. Once you have your license, you can use it any way you want as long as you don't unduly disturb the neighbors. You rent a stretch of beach and build a wall.

The Steinbrecher system, by contrast, suggests a model not of a beach but of an ocean. You can no more lease electromagnetic waves than you can lease ocean waves. Enabled by new technology, this new model is suitable for an information superhighway in the sky. You can use the spectrum as much as you want as long as you don't collide with anyone else or pollute it with high-powered noise or other nuisances.

In the Steinbrecher model, you employ the spectrum as you use any public right of way. You are responsible for keeping your eyes open and avoiding others. You cannot just buy a 10 year lease and then barge blindly all over the air in a high-powered vessel, depending on the government to keep everyone else off your territory and out of your way. The spectrum is

no longer dark. The Steinbrecher broadband radio supplies you with lights as you travel the information superhighway. You can see other travelers and avoid them.

Even if Steinbrecher radios did not exist, however, the assumptions of the auction are collapsing in the face of innovations by Qualcomm and other spread-spectrum companies. Like Steinbrecher radios, CDMA modulation schemes allow you to use spectrum without interfering with others. To auditors without the code, calls seem indistinguishable from noise. But radios with the code can dig up signals from under the noise floor. Up to the point of traffic congestion where the quality of the signal begins to degrade gracefully, numerous users can employ the same frequencies at the same time.

This property of CDMA has been tested in Qualcomm's CDMA Omnitracs position locator and two-way communications system. Mainly used by trucking companies, it is now being extended to cars, boats, trains and other mobile equipment. Based on geosynchronous satellites, it operates all across the country, with some 60,000 units, under a secondary license that forbids Qualcomm to interfere with the primary license-holders of the same frequencies. Qualcomm's transceivers on the tops of trucks use a small antenna that issues a beam six to 10 degrees in width. Because satellites are just two degrees apart, the Qualcomm beam can blanket several satellites. Other users, however, are entirely unconscious of the presence of the CDMA signal. Omnitracs has operated for some six years and has not interfered with anyone yet.

No More Blind Drivers On The Information Superhighway

With an increasing array of low-interference technologies available, the FCC should not give exclusive rights to anyone. Instead, it should impose a heavy burden of proof on any service providers with blind or high-powered systems that maintain that they cannot operate without an exclusive license, that want to build on the beach and keep everyone else out of the surf. In particular, the FCC should make all the proponents of TDMA, whether in the American or European GSM systems, explain why the government should wall off spectrum. The wireless systems of the future will offer bandwidth on demand and send their packets wherever there is room.

At the same time that new technologies make hash of the need to auction off exclusive licenses, Qualcomm and Steinbrecher also radically attack the very notion of spectrum scarcity on which the auction is based. Steinbrecher's radio makes it possible to manufacture new spectrum nearly at will. By putting one of his MiniCells on every telephone pole and down every alley and in every elevator shaft, the cellular industry can exponentially multiply the total number of calls it can handle. At some $ 100,000 apiece and dropping in price, these MiniCells can operate at 900 megahertz or six gigahertz just as well as at the two-gigahertz range being auctioned by the government. It is as if Reed Hundt is auctioning off beachfront property, with a long list of codicils and regulations and restrictive covenants, while the tide pours in around him and creates new surf everywhere.

Still more important in view of the coming auction, the wideband capability of the Steinbrecher radio joins CDMA in allowing the use of huge spans of spectrum that are ostensibly occupied by other users. The Steinbrecher radio can survey the gigahertz reserves of the military and intelligence services, UHF television and microwave, and direct usage to the many fallow regions. For example, the prime territory between 225 megahertz and 400 megahertz, consisting of some 3,0130 25-kilohertz channels, is entirely occupied by government and air force communications. But most of the channels are largely unused. A Steinbrecher radio could sit on those frequencies and direct calls to empty slots.

An ideal system would combine Steinbrecher broadband machines with Qualcomm's modulation schemes. Steinbrecher supplies the lights and eyes to find space in already licensed spectrum bands; CDMA allows the noninvasive entry Into spans of spectrum that are in active use.

Meanwhile, the Steinbrecher system changes the very nature of spectrum "ownership" or rental. Unrestricted to a single band or range of frequencies, Steinbrecher radios can reach from the kilohertz to the high gigahertz and go to any unoccupied territory. As Steinbrecher radios become the dominant technology, the notion of spectrum assignments allotted in 2,500 specific shards becomes a technological absurdity.

Wall Street is beginning to catch on. When Steinbrecher announced in January a private placement through Alex. Brown, the company wanted to raise some $ 20 million. The response was overwhelming, and hundreds of frustrated Investors were left wringing their hands as the new radio left the station. The sole proprietorship of the mid-1980s with revenues of $ 5 million or less was moving into sleek new headquarters off Route 198 in Burlington. Steinbrecher Corp. was becoming yet another of the Moore's Law monsters.

Meanwhile, the issue for Washington emerges starkly. Do we want a strategy for MiniCells or for Minitels?

Now that the Yeasu FT-51R has hit the market, I'm waiting for the mods to be posted! The Yeasu sales rep told me that the Japanese model receives 800MHz but it was disabled for export.

Hmmm. Wonder how we could enable it? The unit does not come with a schematic, so it's a mystery to me! Don't ask me how I like it yet, I haven't gone through all the bells and whistles. First impressions are excellent, though.

new laws, nada.
To stay on the subject, the ARRL, I feel screwed by their
actions with Lambda. If I belong to a group that wants to advertise in
QST and we just happen to believe in having sex with recent purchases in
the local meat market, should the ARRL be forced to run our ads? Should
they be forced to run an ad for the Golden Shower Lovers of America. How
about the Sex in Feces Couple of America? Then there is that famous group
the Fruit and Vegetable Anal Stuffers of America (FAVASA), should the
ARRL be forced to run their ads? Though they are not illegal acts I doubt
anyone would want to run their ads.

Homophobic and proud of it!

: ......

: > The symbol for the exclamation mark became the comma

The original "international code" had the period:
.. .. ..
Auto code readers could not distinguish this from three i's, and it was the
only character in the code which had spaces in it (note the so-called
SOS is really ...---... without spaces, I think). Thus the .-.-.-
which had been comma was appropriated for the period (in English,
full stop), --..-- became comma, and poor exclamation point was
left out entirely. This happened after I was licensed in 1940,
but I'm not sure exactly when. Gerry K8EF@W8CQK.OH.USA.NA

In Article <srj.786851741@orodruin.NSD.3Com.COM>
srj@ESD.3Com.COM (Scott Johnson) writes:

> 'time' Morse Code; what I mean is, what is the specification for length
> of a dah versus a dit, and the length of the inter-character and inter-word
> gaps?
>
Scott - here is the specification you want:

Using the length of a dit as the unit of measurement -
1. A dah is 3 times as long as a dit
2. Within a letter, the spaces between the dits and dahs are the same
length as a dit
3. Between the letters of a word, the space is the same length as a dah
4. Between words, the space is the same length as 7 dits

This is "standard" spacing. Using this specification, the speed in words
per minute is determined by how many times the word PARIS can be sent in
one minute (PARIS is exactly 50 dit units). The alternative "Farnsworth"
spacing, which is used by ARRL and W5YI in their 5/13 wpm tests (and which
I HIGHLY recommend as a learning method), uses characters sent at around
18 wpm with longer-than-standard spacing between letters and words to
reduce the overall speed to the desired level.

>The opinions expressed are my own and not those of Timeplex.

Seth,
The argument is not the matter of whether K1MAN can broadcast. It is this;

Can K1MAN force a net already in progress to vacate the frequency and make room for his coming broadcast.

Is it a fellony for the participators of the 2100 gang to continue with their ongoing net?

I could really care less if a person is allowed to broadcast. I can always choose not to listen. However if you and some buddies of yours are using a frequency and have been for years and all of a sudden some guy starts broadcasting on top of you ..... It's bad enough that he is qrming us. It is salt in the wound that it is a broadcast. Now after a year or so of being pounded by this jerk he decides we are committing a fellony by interferring with HIS BROADCAST.

Don't you think this is just a little on the strange side????

3926. Is there a ham CD ROM for Macintosh, yet?

Nope. Only way to do it is by the "cradle-style" (My words for it.) battery eliminator. One more tip.... not only does it run the HT at 5 watts, it charges the battery at 50mill's or so, AND has a fan to keep the radio cool. At 5 watts out, this last is *very* much needed.

3928. Any (Much?) A.M. on 6mtr's?

Hello. I'm thinking about buying the *old* dusty Clegg A.M. rig from a local radio dealer. It's 6mtr A.M. (Sorry to repeat it again <hi>) only, but it's only $100, complete w/dc & ac pwr suplies, rig (Of course!), hand mike (No, I am *not* trying to sell it...), and so forth. Should I spring for the rig? Yeah, I've heard; 6 A.M. is *supposed* to be !@#$%!! and all, but I DO want to get onto 6mtr.

Comments, of any stripe, may be left off here, or at my packet address, as follows:

n2lcu@wa2ndv.#nli.ny.usa.noam

P.S. Name here is Ben.

>
>Can anyone shed light?

I agree with your interpretation, Rick. I don't think the rules intend
for you to QSY before IDing. The only example of that is for SS where
you are required to ID on a narrowband channel, but even that assumes
that the narrow channel is somewhere inside the spreading area of the
normal modulation. I don't think that reducing power is within the
intent of the rules either, but I don't see a specific prohibition
of the practice. I certainly know that some nets ID simultaneously,
IE everyone IDs at once on the same channel. That seems to go against
the intent of the rules as well since the resulting QRM makes identifying
particular callsigns difficult, but it isn't specifically prohibited.
The intent of the ID rule is to clearly identify the transmitting
station to monitoring authorities. Any method that obscures that
purpose seems to me to be against the intent of the rules.

>It is salt in the wound that it is a broadcast. Now after a year or so of
>being pounded by this jerk he decides we are committing a fellony by
>interferring with HIS BROADCAST.

97.101 is the controlling rule here. 97.101(b) says that no amateur
station has exclusive use of a frequency, but rather that operators
must cooperate in selecting transmitting channels. 97.101(a) says
that good amateur practice must be followed in selecting transmitting
frequencies. That has traditionally meant first on frequency has the
right of way, the only exception being emergency traffic, which always
has the right of way. Now first on frequency *doesn't* mean he who has
used the frequency off and on for years. Rather it means he who is first
using a frequency at a given time. I take that to mean that if his
broadcast starts before your net, you have to give way. OTOH, if your
net starts before his broadcast, he has to give way.

However, W1AW has set a different precedent that muddies the waters.
They've maintained that they can come up on top of another amateur
simply because they publish a schedule. They assert that the mere
publication of a schedule gives them some sort of ownership rights
to the frequency at specific times. K1MAN is taking advantage of
this precedent with his operations. The only way to deal with K1MAN
is to make W1AW also adhere to good amateur practice by first listening
for a clear frequency before transmitting. As long as they decline to
do this, and defacto define good amateur practice, K1MAN is in the clear.

As to K1MAN's felony assertions, he's probably blowing smoke. All
he can legally claim is violation of 97.101(d) willful or malicious
interference with another station. Violation of that rule is not
typically a felony. Typically it is a subject for administrative
action, though continued violations *can* be treated as felonies
under the Communications Act of 1934. So if he wants to press hard
enough, he may have a case thanks to the W1AW precedent.

[rundown on upcoming PCS satellite systems deleted]
>Give them all time. What will be the importance of amateur
>radio emergency communications in 10 years? Any comments??

PCS in all forms is reducing the role of amateurs in emergency communications. As more and more of the public gains wireless communications abilities, most of the emergency calls will cease to be amateur. In fact, that's likely already the case thanks to terrestrial cellular.

If the amateur role in emergency communications is to be more than an insignificant fraction, other things than mere access to wireless communications will have to be the basis. Emergency communications is more than just hardware. Effective emergency communications is also the ability to deliver emergency messages in a clear, organized, and systematic manner. More than mere access to 911, effective emergency communications relies on trained interactions among responders.

This is far the harder problem. Mere hardware doesn't yield effective emergency communications. The *substance* of the communication is also of vital importance. The ability to communicate information in a clear organized manner is a skill amateurs *should* have. Unfortunately, typical amateur operations don't do much to prepare us for that. Aside from NTS and ARES activities, most amateur operations rely little on organized delivery of message content. Amateurs are caught up in empty constest style exchanges, such as in Dxing, or in disorganized chatter, such as in typical repeater operations, rather than in developing skills to communicate real content in a meaningful and organized way.

Emergency communications is more than just hardware, but the technologies in use do play a role in shaping the type of communications possible. For directed point to point communications, most amateur techniques are woefully lagging behind the state of the art. The only switched messaging system we have is packet, a technique where we once led but now lag. There are no trunked or cellular amateur systems, few local, regional, or national switched services, etc. We do have a fair ability to do point to multipoint transmissions via our repeaters and nets. Our strongest suit is the ability to cobble together ad hoc communications systems, but most of those are based on woefully inadequate and

antiquated techniques.

If amateurs are to retain a signifcant role in emergency communications, we need to update our skills and techniques to meet the needs of a modern emergency response system. While updating our own systems and skills, we also need to integrate other communications systems with ours. An amateur emergency responder without cellular phone capability today is inadequately prepared. In a few years, lack of satellite cellular will be considered unprepared. We also need to interface with other communications systems than cellular phone. We need to consider CB, GMRS, Marine (when appropriate), Internet, wireless data networks, etc communications capabilities as part of the basic package we can bring to an emergency communications situation.

In the final analysis, it's the skills we bring to getting the message content delivered correctly and in a timely manner that matter. The methods and modes we use are secondary. Our goal has to be to be communicators first, amateurs second, in emergency situations.

I would suggest NOT putting the antenna up without doing external sealing on
the joints and maybe driling holes in the base so there will be drain holes for
moisture that may build up inside the fiberglass....

We are using some of the X500s on our packet network in Houston...they have
been up over a year and have survived quite well...though I did hear similar
horror stories about the antennas, we have taken precautions....

(I use a Comet tribander on my FM rptr system....a CX333 tribander and am damn well pleased with the results!)

3933. FT-840 Expanded RF Mod

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-10 13:02:20 UTC
From: paul@theborg.mlb.fl.us
Message-ID: <paul.0xt4@theborg.mlb.fl.us>
Source record: 255130

I saw many requests for this mod but never had a chance to post it till now.

Yaesu FT-840 Expanded RF
All band modification:

1. Remove bottom cover and locate vertical pin TP 2003.

2. Connect a jumper wire from this pin to ground.

3. Hold SSB button and AM button at the same time and turn the radio On.

4. Frequency display should read "02 OFF". Turn Frequency knob until display reads "02 ON". Now turn radio Off.

5. Hold VFO/M button and UP and DOWN buttons at the same time and turn the radio On.

6. Last, turn radio Off and remove jumper from Test Point 2003.

7. Reassemble radio.

This mod allows gerneral coverage transmit on the FT-840.
I assume no responsibility, proceed at your own risk.

we had major problems with water in our x500 too, twice. it was very well
sealed. Since we put in the drain holes, it has been ok. time will tell.
i would go elsewhere for a new antenna.

3939. Re: Floating a battery on a PS

Newsgroup: rec.radio.amateur.misc

Source record: 255281

The application note I have for Power-Sonic Sealed Lead-Acid Batteries states that "float service life under continuous charge depends upon the frequency and depth of discharge, the float voltage, and the ambient temperature. At a float charge voltage of 2.25V-2.30V/cell (13.5 - 13.8 V for a 6 cell battery) and an ambient temperature of 60 to 77 deg F, Power-Sonic batteries should last four to five years before the capacity drops to 60% of its original rating."

The applicate note is quite extensive including suggested charging circuits. Their address is Power-Sonic Corp., P.O. Box 5242, 3106 Spring Street, Redwood City, CA 94063 (415) 364-5001.

I have no connection with Power-Sonic other than being a happy user.

I just blew 11.50 because I'm too stupid to be able to take the simple Technican test, so maybe I'll take it next month.. And wait another month..

If... How long will it take for the FCC to give you a callsign with the new computerized system? IE: Will it take a week after I take the test, two weeks, etc..?

I wanted to buy a radio for christmas, but what's the point if I have to wait until March to use it.

>and legal (Alinco DJ-580, and a 2W in 30W out linear for 2M only), and of
>course FCC approved :). Has anyone had any good or bad experiences with
>this car? I really do not want to have to buy a new engine computer module!

I drive a '92 Escort GT (same 16V engine as the '92 LX-E) and run an FT-5200 dual bander with no trouble at all with any "on board" systems. I have experienced cruise control problems in rental cars when using my hand held, even without an amp (Sables and T-Birds). Getting the antenna outside seemed to help but I don't like carrying mag mounts in my airline luggage.

The trouble was when the cruise control was set and controlling the speed: Key up on 2M at 1.5 watts (rubber duck in the car), the cruise would disengage and the car would slow down. Release the PTT and the cruise would re-engage assuming the new, slower speed. On 440 the cruise would disengage but had to be manually reset to assume any speed. I never experienced any uncommanded accelaration or anything I felt was dangerous (doesn't mean it couldn't happen). It was just annoying.

Your best bet to prevent trouble is to do a good antenna installation to keep as little RF from getting into the car's wiring as possible. In my GT, I put the transciever in the back (trunk) and mounted the control head up front. The ran power wiring, both positive and negative, directly to the battery and included a chassis ground to the car body near the the radio. (If you run pos and neg to the battery be sure to fuse both sides.) I punched a hole in the roof (there is room behind the power moon roof gear) and NMO mounted my small Diamond dual band antenna. This insured that the coax shield had a good ground to the car chassis at the antenna and at the radio connector.

You might consider remote mounting your amp to reduce the coax run. You'll likely want to install a remote power switch on/near the dash and a good relay to power the amp. Don't cut corners on the wiring you install.

In my experience installing commercial two way and cellular radios almost all such car problems could be attributed to what we called "stereo shop installs". Good installation practices are your best bet. Just about any car can tolerate a 50 watt radio if you install it properly.

Good luck

Hi,

I picked up a Rabbit transmitter and 3 receivers for $30.00 bucks!
I'm looking for some pointers in getting started in ATV. I noticed
that these NTSC/900mhz weak signal transmitters work at freqs 900mhz-902mhz.
I use mine right now for DX spotting around the house by being able to
monitor my packet station on the DX cluster. But I was thinking of expanding
the distance to the barn and maybe even the park about 3 miles away.

1) Can they be modified easy to work on the ham ATV freqs 909-915?
2) Does anyone know who would carry "Bricks" for 909-915 mhz
ATV transmitters.
3) Without modification to them how how far could they work if I added
say an 11 el beam at line of sight.

Thanks!
Russ N0MRR

I think you will not find that "PCS" works as well as the
boys in the advertizing think it will...

At 2 ghz with a 1/2 watt hand held-- no gain ant-- how far do
you think that will transmit? your provider will have to have a
tower every 2 miles or less...

This may be ok in Chicago or NY City... but it will be a long
time before you will see it in other the big markets...

Also... try talking to others round robbon on a Cellular or PCS...

Lot's of luck..... TKC

from the Wireless Opertunities Coalition WEB Home Page

THE LMS - PART 15 PROCEEDINGS...

I. Background.

1. This Proceeding was initiated by a Notice of Proposed Rule Making ("NPRM") issued by the Federal Communications Commission ("FCC") in response to a Petition from North American Teletrac and Location Technologies, Inc., which is now known as AirTouch Teletrac ("Teletrac") .

2. Teletrac is currently an FCC licensee. It operates an Automatic Vehicle Monitoring Service ("AVM") which locates vehicles. While the FCC created AVM in 1974, it did so with some reservations about the technology. Therefore, the FCC decided not to adopt permanent rules for AVM, and AVM has been operating with interim rules ever since.

3. Teletrac's petition asked the FCC to expand the FCC's AVM Service to permit AVM licensees to locate people and other objects and to permit expanded voice service. Teletrac also wants the Commission to adopt permanent rules for this service and to call the expanded service the Location and Monitoring Service ("LMS"). Teletrac says it needs permanent rules if it is to be able to attract investors and build systems. The NPRM contains all these proposals. There are three other major proponents of LMS: MobileVision, Southwestern Bell and Pinpoint Communications.

4. The FCC requires AVM licensees to operate in the part of the radio spectrum between 902 MHz and 928 MHz. This is known as a "frequency band" or just "band." This band is also used for United States Navy radars and other government operations, for industrial, scientific and medical devices, by amateurs (HAMS), and by "unlicensed" low power services known as Part 15 services (so called because Part 15 of the FCC's Rules requires certification of radio devices but does not require licenses to operate). Metricom's radios are Part 15 devices. Part 15 devices provide a variety of services including: new digital cordless telephones, local and wide area wireless data transmission, protection of life and property, energy efficiency and conservation programs, automatic utility meter reading, inventory control, bar code readers, wireless PBXS, and numerous consumer devices such as wireless headphones, speakers and remote controls.

Millions of Part 15 devices are now in the hands of businesses and consumers, and millions more will be in the very near future due to the advent of new digital, spread spectrum cordless telephones which offer improved quality and range.

5. All these users of this band must share the frequency and, when there are uses which conflict with each other because one user interferes with the signal of another user, certain rules come into play which govern which user has priority. These rules thus create a "hierarchy" and dictate which user must stop transmissions if that user is causing harmful interference to another user with a higher priority.

6. In the hierarchy of users, Part 15 devices are at the bottom. Part 15 devices may not cause interference to other users of the band and must accept interference from other users of the band.

7. The hierarchy of users in the band is generally not a problem for Part 15 devices because the robustness, power, and technology employed by Part 15 devices is such that it does not generally cause other users harmful interference, nor do other users cause harmful interference to Part 15 devices.

8. Unfortunately, Teletrac's technology is old and it is very fragile. Teletrac's technology will experience harmful interference from Part 15 devices, even though they are the least likely devices to cause harmful interference. Because Teletrac has a higher priority in the band, it could demand that operation of the offending Part 15 device be terminated.

9. In addition, Pinpoint Communications, another company proposing to provide LMS, proposes to use a technology different than Teletrac's which will cause interference to Part 15 devices because of its extensive use of spectrum and very high power.

II. Arguments.

1. Teletrac has told the FCC that its technology will not be bothered by interference from Part 15 devices. This is simply not true. (The overwhelming weight of the record thus far complied in the LMS proceeding demonstrates that Part 15 devices will cause harmful interference to Teletrac's operations.) Teletrac is taking this position before the FCC because it is afraid that if the FCC believes that Part 15 devices will cause LMS interference, the FCC will not create LMS. The FCC would be reluctant to create LMS because it would not want to create a new service which would not work due to the interference it would receive from Part 15 devices.

2. The Part 15 Community has told the FCC that if Teletrac is telling the FCC the truth about the interference issue, Teletrac should not object if the FCC makes LMS equal in the hierarchy of users to Part 15 devices. If the FCC removes the LMS priority,

Teletrac would be forced to tolerate interference from Part 15 devices.

3. The Part 15 Community has also told the FCC that if the FCC creates LMS and does not make LMS equal with Part 15 devices, Teletrac will be constantly petitioning the FCC to locate and shut down interfering Part 15 devices. The Part 15 Community has reminded the FCC that it does not have the resources to locate and shut down all these interfering Part 15 devices because there are over 2 million of them, operating at unspecified locations.

4. The Part 15 Community has also told the FCC that if it creates LMS and does not make LMS equal with Part 15 devices, and if the FCC then begins to locate and tell consumers they cannot use their Part 15 devices, these consumers will begin to complain to their elected officials. Due to the large number of Part 15 devices currently in the hands of consumers, Congressmen will be deluged with complaints about FCC actions and the FCC will spend massive resources responding to Congressional inquiries about its actions in shutting down large numbers of Part 15 devices.

5. Teletrac has argued that due to the hierarchy of users, the Part 15 Community has no rights to complain about a new service being put into the band, even if the new service cannot coexist with Part 15 devices. The Part 15 Community has responded that it has designed its devices so as not to cause interference to users of the band who were in the band when the Part 15 device entered the band. It is manifestly unfair to require these Part 15 devices not to interfere with a new user never contemplated when Part 15 devices began operating in the band.

6. The FCC strongly encouraged the development and deployment of Part 15 devices in the band and the Part 15 Community responded with significant applications in the public interest. The result is that the FCC has created a substantial industry in this band which employs a great number of people, which has continuing substantial investment and which is uniquely American. These applications will cease and an industry, together with the jobs and investment it creates, will be destroyed, if the FCC creates LMS as currently proposed.

7. The band is not vacant. It is extremely crowded with users. The FCC should not place a service in the band which is highly susceptible to interference by other users that are currently in the band.

8. Teletrac's argument that it needs permanent AVM rules in order to attract capital for its operations fails when one considers that PacTel Corporation raised a record-breaking $1.38 billion in the capital markets for its wireless subsidiary of which Teletrac is a part.

9. Part 15 devices are being used in applications which promote the development of the National Information Infrastructure ("NII") and are, therefore, in accord with national policy regarding the NII. LMS is not in accord with the national policy regarding the NII and the public interest requires that Part 15 devices be favored over LMS.

10. Teletrac is a failing business which has lost money every year of its existence. The American public is not interested in Teletrac's technology. It has failed in the marketplace. Although Teletrac has hundreds of licenses in 36 states and the District of Columbia, it has built only six systems and has fewer than 6,000 subscribers. If the FCC gives Teletrac what it wants, Teletrac will be the beneficiary of a substantial amount of spectrum for which it will not have had to pay the government. Therefore, it will be much easier to sell.

11. There are other technologies that do what LMS does but they do it in other parts of the radio spectrum, and they do it much more effectively and economically than LMS does it. Therefore, the American consumer will not be deprived of LMS-type service if the FCC abandons its LMS rulemaking. The FCC does not need to create another such service, particularly if that service will not work (due to interference), will disrupt or destroy the Part 15 industry, and will upset consumers and annoy members of Congress.

12. The government is vacating radio spectrum in various bands. These bands will be regulated by the FCC as the government gives them up. The FCC could create LMS in one of these bands and could thereby avoid disrupting the 902-928 MHz band.

13. Teletrac and the other LMS proponents have finally agreed to meet with the Part 15 Community in an effort to find a technical solution which might allow the systems to coexist. Two meetings have been held and there appears to be some progress toward attempting to find a way that the services might be able to coexist. The FCC should not take any action until the parties involved have an opportunity to explore a suggested technical solution.

III. Conclusion.

It is patently unfair for the FCC to jeopardize the promise and economic viability of the Part 15 industry so soon after it encouraged significant investments to be made by manufacturers and consumers alike, for the sole reason of giving one of the world's largest companies a monopoly and a spectrum windfall of enormous value. The Commission should abandon its rulemaking proceeding and not create LMS. If the Commission insists on creating LMS, it should do so only if it makes LMS equal to Part 15 in the hierarchy of users, or if the FCC places LMS in some other band.

for more information on these issues of interest to amateurs as well as consumers of part15 devices that share the amateur 902 Mhz band.

THE BATTLE OVER LICENSE-FREE USE OF THE RADIO SPECTRUM...

A Backgrounder on the Part 15 Debate

_____ THE ISSUE

An imminent decision by the Federal Communications Commission could dramatically affect the daily lives of millions of American consumers, as well as hundreds of businesses and public entities. Proposed rules under consideration could threaten a wide range of low-cost, state-of-the art consumer and business electronic devices -- including digital cordless phones, utility meter readers, wireless stereo speakers, remote controls, and home security systems.

The FCC is considering whether to expand the wideband Automatic Vehicle Monitoring (AVM) service that operates in the 902-928 Mhz band into a new Location and Monitoring Service (LMS). If the FCC decides to expand the current environment by including LMS, it will open the door to wide-spread interference from existing devices and services.

Because the rules would allow wideband AVM/LMS operators to demand that license-free wireless users cease to operate if there is any interference, this would be a severe setback in the use and development of license-free wireless devices -- the development of which has been encouraged by the FCC and embraced by the marketplace.

Should the FCC overrule the clear choice of the marketplace by giving an anti-competitive advantage to AVM/LMS companies, the U.S. would lose tens of thousands of new jobs, forfeit more than a billion dollars in potential economic growth, and waste the efforts of many of our greatest technological innovators and entrepreneurs.

BACKGROUND

The Federal Communications Commission (FCC) is expected to decide within days whether to adopt new rules regarding the use of the 902-928 MHz band.

This 902-928 MHz band is currently used by many types of low-power services and is often employed by small businessmen, innovators, and entrepreneurs whose technology does not require a license from the FCC. These technological leaders share access to the band under Part 15 of the FCC's rules.

The AVM/LMS corporations are essentially seeking exclusive licensed use of a portion of this spectrum band for expanded automatic vehicle monitoring (AVM) services. Because of the fragile nature of the AVM system, other current users of the band could cause interference to it. If they caused interference, they could force those other users to cease operating their systems, services, or devices.

Currently, all users share the spectrum within rules established by the FCC. Under these rules, the Part 15 products and services cannot cause interference to other non-Part 15 devices and services.

THE PLAYERS

The Wireless Opportunities Coalition is made up of individuals, organizations, and companies that want to ensure the continued growth of the unlicensed wireless industry.

Consumer and business electronics devices using the 902-928 MHz band under Part 15 of the FCC's rules include: automated utility meter readers, automobile and railroad traffic signal control devices, wide-area data networking, cordless telephones, wireless headphones and speakers, retail security scanners, home security systems, lifesaving medical devices and many others communication devices.

The AVM corporations seeking expanded access to this band are five telecommunications companies. They are Airtouch Teletrac (formerly PacTel), MobileVision, Uniplex, Pinpoint Communications, and Southwestern Bell.

THE EFFECT ON CONSUMERS

Giving AVM companies expanded access to the band would affect the daily lives of millions of Americans. More than three million Part 15 devices are now in use by U.S. businesses and consumers, and the market is about to explode.

Under the proposed rule making, users of Part 15 devices that cause interference could be ordered to cease their operation. Cordless phones, home security systems, medical devices, and others could be rendered ineffective or useless.

ENCOURAGEMENT FOR THE TECHNOLOGY

The technologies employed by the Part 15 coalition companies have been developed with the encouragement of the FCC. The FCC Office of Engineering and Technology noted that "our attempts to

encourage this development have been successful and today millions of Part 15 spread spectrum devices provide a wide variety of communications services..." Congress also has investigated Part 15 technologies. In the House Energy and Commerce Committee Report to accompany the October 1994 FCC Reauthorization bill, it stated:

"A major consideration in the Committee's deliberations must be the current deployment of these [Part 15] devices throughout the country. An allocation decision that has the effect of rendering useless millions of these devices - many of which cost $200 or more - would cause a significant number of American households a real hardship."

The technology used by the AVM companies who want exclusive use of the spectrum is fragile and old, having been developed for use in a foreign country more than 20 years ago. Part 15 companies use innovative and ultra-efficient technologies to share the band, permitting coexistance of a wide range of consumer devices.

ECONOMIC IMPACT OF AN ADVERSE FCC DECISION

An adverse decision by the FCC will have a clearly negative economic impact on the nation. Immediately, it will mean the loss of jobs and sales for a technology the marketplace has openly supported. In the longer term, it will mean lost economic opportunities.

A negative decision would deny consumers of low-cost, high-quality products (as well as lower, more timely, and more accurate utility bills), and have obvious negative ramification for utilities, public institutions (such as schools), businesses and other private enterprises (such as health-care providers) that could use wireless data networks.

The U.S. Department of Commerce has estimated that annual sales of consumer electronics devices operating in this spectrum are currently close to $1 billion. By 1996, sales are expected to top $1.5 billion.

Part 15 companies estimate that they have invested more than $2 billion in research and development on emerging technologies that use the band.

>to wait until March to use it.

Wally, that is probably a sound economical decision. However most new
"no code hams", grab there radio jump on the air and start talking. They
are generally very exited and ready to tell everyone that they just got their
license. They are so exited.

Sometimes these new hams have learned the rules and regulations and know
almost nothing about protocal. How long should a person listen before
speaking. What is hang time? "KO4TA for the patch" , " You are full
quieting" , "round table"

Why don't you go ahead and buy the radio you are wanting and spend some time
monitoring the frequency that you are ready to transmit on. There is no
better thing you can be doing with the time than studying for your upgrade.

73 es God Bless

Don KO4TA

Hi John. It's a Taylor meeting isn't it??

I write from the boonies! I'm located in South Central Kentucky. This area is the Cave Area since there are sinkholes everywhere in this region and Mammoth Cave National Park is only 15 miles NW of me.

We are just starting to wear shoes here......

This immediate area has 1 repeater on 146.94 which has been operating since the mid-70's. It's almost impossible not to get an answer when you sign on. We have 1 repeater on 444.925 which is not as busy as the 2 meter one, but it's getting there. Emergencies are handled with the autopatch as you described in your 9-1-1 comments, of course the phone location drives the operator a little nuts, but once they understand that the emergency location is not the repeater site all goes well.

Actually I post this to say that two meters is VERY useful for emergencies and is VERY well thought-of by our county Disaster & Emergency Services and local authorities (police, Sheriff, Mayor, Judge Executive, etc.). We have a ham in virtually every one of those offices and a phone call to them or from them sets a network of commuicators into action. We work everything from ice storms (power & phone lines down) to simple communications for 5K footraces. The City of Glasgow (KY) thought enough of our local radio Club to "give" us a large room in the basement of the City Hall for our meetings, training and EOC use. Our SKYWARN activities on 2 meters is monitored by at least 5 counties and a number of hospitals as we track severe weather in the area. Their staff worry about their homes and families even when the hospital is not in the line of storm. Knowing where the damage happens gives a good indication on who should go home and who can rest their worries. Without this half the staff will want to leave and check on the kids.

Okay I wanted to toss two more cents into the fray!!

>hpeach@pop.uky.edu
If you are going to be logged in all the time to Internet (and I don't
see how you could avoid it), then why not just open an IRC channel and
post there. Other than some of the B&Ws that Packetcluster has like WWV
and News, this should work fine. There will be those that contend that
this would not be ham radio, but then again I'll be Marconi/Maxim would
be shocked at an FT-1000D!
73,JIM, W4QO
BTW I understand that at 9PM on Saturday and Sunday evenings, there is an
IRC called RTTY open and many times I have met nice hams on #hamradio

3951. QSL info 4K1F, KF2KT

In case anyone else is looking for a current address for KF2KT, the QSL manager for 4K1F, I've been told it's now:

Nick Komissarov
1862 Woodbine Street
Ridgewood, NY 11385

By the way, did anyone hear/work a TU on 18.073 MHz around 16:48Z today (December 11)? He was 339 here in Milwaukee, and I didn't catch his full callsign.

73,

Rick WB9GYT

Just barely to a low orbit satellite if you have a line of sight path.
The free space loss at 2 GHz to 200 km is 144 dB and with +27 dBm
transmitting power, the received power is -117 dBm. The receiver sensivity
might be around -120 dBm, which is really marginal if a simple dipole
is used at the satellite. For reliable communication with more or less
obstructed paths, the antenna at the satellite must have a gain of 20-30 dB.

> your provider will have to have a
> tower every 2 miles or less...

> This may be ok in Chicago or NY City... but it will be a long
> time before you will see it in other the big markets...

The reason that even smaller cell sizes than 2 miles are used in such
cities, is not that the signal couldn't travel longer than that.
The real reason is to reuse the same frequencies and thus be able to
support a much larger number of users with a limited number of channels.
The propagation on 2 GHz shouldn't be too much different from the
propagation on 1.3 GHz, so take a look at the service area for any 23 cm
repeater. We are talking about distances more than ten times as large.

The problem with satellite based cellular system is that you can not
make the cell size small enough for densely populated areas. The beam
from a 30 dB antenna might be 6 x 6 degrees, which is too much and IMHO
ground based networks must still be used for densely populated areas.

>thanks to terrestrial cellular.

i would say this is mostly true.

problems seen to date:
cell radio batteries not charged and no place else to get power.
the trained folks didn't normally use the phones or did all the time
so the result was depleted batteries or uncharged batteries.

on scene folks didn't have the magic phone number to get through
to support folks & the support folks had their main number routed
to an answering service (who didn't have the special number..)

cell coverage weak to non-existant.

no broadcast mode (can't call many with 1 call..)

i would bet that the calls weren't made free of charge...

: needed?). I think the rest of your address in the header is right.
: 73 de Ed Engel N7UQZ

There is no login process needed if you telnet as follows:

telnet callsign.cs.buffalo.edu 2000

You need the port number 2000 to go immediately into the data base.
Once there just type:

call k2unk

and you'll get me info, type help for additional search
options (e.g. "name sohl" will get you a listing of all the
hams with the last name of sohl.

Hope that helps.

A friend of mine has a TM-742A that does this too. I tell him to bang
the mike a few times on the steering wheel and try again. He ignores
this because he knows I cut my teeth on a Motorola 5V, but he wiggles
that stupid mike connector, and bingo!, audio is back.

Note, I was using PCS in the generic sense, not just for micro-cellular systems. I meant Personal Communications Systems to cover the whole gamut of micro and macro cellular as well as the soon to be satellite phones. In fact, some suppliers intend to make multifunction phones that will automatically go from one to the other to the other as you move about.

> At 2 ghz with a 1/2 watt hand held-- no gain ant-- how far do
> you think that will transmit? your provider will have to have a
> tower every 2 miles or less...

Yep, that's the plan. Fortunately, the micro-cells are simple compared to regular cellular, and there are phone poles everywhere. The micro-cell sites are just small pole mounted boxes. They even plan to have some of them *inside* large buildings.

> This may be ok in Chicago or NY City... but it will be a long
> time before you will see it in other the big markets...

It may saturate the top 100 markets first, though I hear that testing has already started in smaller communities, so some of them may have it first. There's supposed to be a small town in Texas where each of the 250 residents has been given a PCS phone. They don't even have wired phone service, so it's supposedly quite a culture shock.

> Also... try talking to others round robbon on a Cellular or PCS...

Think *conference bridge*. That's old technology, and is much simpler and better when implemented locally in today's digital switches.

>
>but will all these services forgo their usual fees to permit emergency traffic
>to flow?

I doubt it. Does the wired telephone company waive it's charges during
emergencies? PCS rates are supposed to be comparable to metered service
rates on wired phones. I'm sure the big emergency services providers can
get a bulk rate, like they do with normal wired service.

>how about after a big hurricane wipes out a city?
>
>will these services be able to handle a couple of hundred of percent over
>load?

As I noted in another post, some of the equipment providers intend to
offer phones that will automatically switch from micro-cellular to
regular cellular to satellite cellular depending on what resources
it finds available in your calling area. The phone companies already
have the capability to shed non-essential callers from their systems
if overloads occur. As cellular type systems become the backbone of
emergency communications, I expect the emergency services providers
to work with the phone companies to make sure *their* phones get
priority. That's simple to implement in the new digital systems.

>how will anyone know who to call?

The emergency services providers will establish key numbers for their
workers to call. Likely, the numbers will be pre-programmed into their
phones. My portable has a 99 number memory. I doubt most emergency services
people need more than that.

>will any of these services provide for a "radio mode" of operation?

Think *conference bridge* or *custom calling*. That old technology
now works much better when implemented on a digital switch. Full
duplex, no doubling, it's much better than radio nets, and is fully
configurable on the fly. You can setup as many independent sub-nets
as you need, and you can crosslink any selected individual to more
than one conference bridge as needed for liaison work, all at the
touch of a few TT buttons.

I'd note that my company has switched over from our own two way radio
system to cellular phones in our vehicles for dispatching and coordination.

It's much more efficient since multiple conversations can be going on at the same time. Even though it costs us a bit more in monthly charges, we're out from under the capital costs and maintenance costs of an independent radio system. I expect that public service agencies will consider that option too the next time their radio systems need an upgrade.

911 type services could be speeded up if the phone system automatically routed the call to the closest available unit instead to having to funnel through a central dispatch center. The technology is available to do this. In my hometown, *the* cop has a cellphone in his cruiser. That *is* the 911 response number. That makes switching absurdly simple, but the cellular system has to keep track of the location of every phone in the network anyway. It's no big trick to route calls to the appropriate phone. If the caller needs the fire department or ambulance service, the first responder can call forward them with the touch of a memory button. (Note there may be management reasons why a central dispatch is preferred in big cities, but the technology is available to do it the way I outlined.)

Where does that leave hams with our antiquated technologies? Out in the cold if we don't get with the program and update our skills and techniques. We can establish self-configuring and self-healing network topologies. We can make use of trunked and cellular techniques. We can cross train on other service's systems. But will we? Or will we be content to beep back and forth forever, exchanging postal cards, as we become more and more irrelevant to the modern world?

Gary

I just saw in a Tucker Catalog 800 527 4642 A Daiwa PS 50T Power Supply,
13.8 V, 5.2 A and "features a built in cigarette lighter socket and is
excellent for use with handheld tranceivers . . 6"x3"x8", 6 lbs

Also, they have a Zurich 12V, 3 A power supply that I have on order
that does not require a flitered cord, just the jack to fit your DC input
and two leads to connect in.

Good luck! Dave AB7FV

When learning the code, you'll quickly come to realize that speed is a
relative term. When I was first learning, for example, I could
comfortably copy 5 to 8wpm. I've since jumped the hurdle to 13wpm and can
comfortably copy 10 to 13wpm, but have to struggle to copy 5 to 8wpm.

3968. Canadian Information on Amateur Radio Licenses WWW Page

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-11 02:48:10 UTC
From: dino@cam.org
Message-ID: <dino-1012942148100001@dino.hip.cam.org>
Source record: 255307
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

I tried to post this 2 days ago but haven't seen it so here we go again.

With the help of a fellow ham, I've put together some WWW pages containing information available from Industry and Sciences Canada regarding amateur radio in Canada. These documents are literal copies of the printed text.

These are the topics:

1. RIC-01 Guide fro Delegated Examiners
2. RIC-3 Banned Countries List
3. RIC-24 Information on the Obtention of a Canadian Amateur Certificate
4. RIC-25 Rules and Regulations regarding Amateur Radio in Canada.

Note that the RIC-3 and RIC-24 are not the current versions but I should have them updated by next week.

The info can be accessed from http://www.cam.org/~dino/ric.html

and feel free to check out my Home page too, some other interesting links may be found.

3969. morse code question

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-11 03:45:32 UTC
From: linus@picard.cs.wisc.edu
Message-ID: <3cdsks$2au@spool.cs.wisc.edu>
Source record: 255308

Hello...

I want to learn morse code, and copied the code down from a reference card that a friend of mine had, but somehow I think that the code is wrong. After checking the FAQ, I could not come up with an internet source which has the code listed.

I was wondering if someone could either send me a copy of the code or provide an address (ftp/www) where I could locate a copy of the morse code alphabet.

Thank you very much!

Asim Choudhri

(PS: I realize this is a very stupid question, so to show my gratitude to you I will answer any questions you may ever have for rec.music.classical but don't want to ask because you don't want to get flamed... this includes questions such as "What is the music on the DeBeers diamond commercials" or "What was the opera piece from 'Philadelphia'" or stuff like that... i'd be glad to answer any of that stuff in return for the morse code info! Thanx again!!!)

3970. Techno-Whizzy project !?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-11 03:52:35 UTC
From: hduff@humnet.westonia.com
Message-ID: <7562-187996101@humnet.westonia.com>
Source record: 255100

I'd like to hear from builders of the "Techno-whizzy" DDS controlled
HF QRP transmitter project from Dec.92/Jan.93 issues of 73 magazine.
I am putting one togehter but I have found a discrepancy in one of the
parts as listed.
L1 is shown as a 100 mH 2 Amp coil available from Radio Shack.
The only coil that I see at Radio Shack (and in their catalog) is
a 100 uH 2 Amp coil...that's microHenry, not milliHenry as called for.
What do I really need here...100 microHenry or 100 milliHenry ?
Seems that Radio Shack only carries 100 microHenry and the article
specifies it as a Radio Shack part.
Was there an error in the article ? Should it actually be 100 uH ??
I should be able to source either one elsewhere than R/S however, now
I'm confused as to what is really needed.

Otherwise, I like to hear about your TW-1 !

Please send e-mail reply to: hduff@humnet.westonia.com
73 and thanks...

3972. Oregon Mishap

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-11 07:35:52 UTC
From: rickmcm@delphi.com
Message-ID: <9412110235591.The_Win-D.rickmcm@delphi.com>
Source record: 255312

On the Spectrum Radio show this evening, they were talking about a mishap that happened up in Oregon this past week. I did not have a pencil handy, and did not get a chance to write down the station callsigns involved.

They said it was the broadcast engineer's worst nightmare. They said a delivery truck was delivering a new transmitter to a transmitter site and snagged a guy wire. They said the tower fell, taking down a couple of other towers I believe. They said it took down the towers for a TV station and several FM radio stations.

Anyone else hear about that? Anyone have any information on it?

It sounds like the engineers up in Oregon had a very exciting week.

> --
> Tom wolfe
> cybrchrs@vllyoak.resun.com

No, it is not ok. The regulations forbid encryption or coding DESIGNED TO HIDE THE CONTENT. The gifs and uuencodes and such are known algorithms with known keys athat ANYONE can easily decode. That is not a code to hide the message. PGP is VERY CLOSE to IMPOSSIBLE to decode without the key and that means even for the most powerful government agency. That is why it is illegal on ham radio. I don't agree with that rule, I think it is a violation of the spirit of the constitution. It is a rule me must live with though.

An excellent reply and an excellent argument as to why it is a ridiculous
rule that ought to be changed. Not only that, if it were business traffic
nobody could know so who cares. I agree that packet is slow and next to
useless anyhow.

Ask around at the AM stations - the chief engineers are frequently hams,
and have had to solve problems. We have a 50kw station here (KRLA)
that is right on the border of a housing area, and the chief mentioned
one time that he buys telephone filters by the dozens, and his staff spends
"a _lot_" of time installing them. Even the little spanish language 5kw
stations have the problem - one of KWKW's towers is less than 1,000' from
an apartment house, and KALI has it's towers in a nursery, which is in a
residential area. I read a newspaper article a year or so ago about one
resident who was suing KALI because "he hated mariachi music coming from
his water pipes, house wiring, and especially his toaster".
The suit was never filed.

I'll attempt to follow up with a couple of chief engineer friends, and
post their recommendations...

Rick,

any amateur station MUST be IDed on the FREQ it is transmitting on at that
time.....

it cannot ID somewhere else in the band....that is NOT what Part 97 says..

In fact if you were in QSO on one freq and moved to another, you must ID on the
former freq before moving.....then ID at the 10 min inerval on the new
freq!...

: these would be greatly appreciated.

There is a repeater system running across Southern New Mexico, Southern Arizioa, a little bit into Texas and I understand one link to Colorado Springs. It is called the ZIA net. My chart shows there to be 13 repeaters on the net, and that was before Colorado was added. The fellow that designed it is Milt Jensen (N5IA), Rt 1, Box 176, Duncan, Az 85534.

We have a repeater close by here so I see the system is up most of the time. Once in a while part of it is down, but reliable most of the time.

No official agency is going to help you with a frequency dispute, for the reasons you already cited. If this person is a member of a local club, though, maybe his fellow members could prevail upon him.

ON THE OTHER HAND, broadcasting IS flat against the law, and if we let folks do it with impunity, our bands will be messed up for good and all. I urge you folks to focus on that issue, and to KEEP inunindating ARRL and FCC with THOSE complaints. To make your case strongest, however, you should probably entirely drop the complaint about frequency hogging.

Good luck!

People have not always believed that setting membership qualifications for
private, voluntary organizations was undemocratic and unethical. That belief,
it seems to me, is a consequence of a recent perversion of the idea of
equality. I believe we are all equal in the treatment we deserve just because
we are human (justice, compassion etc.), and we should all have an equal chance
to earn the things society has to offer. But we are not equal in our athletic
skill or our cw ability. For that reason, I don't get to be a member of a
professional basketball team (I'd interfere with their activities), and you
don't get to be a member of a cw society (you'd interfere with their
activities).

GH> Glenn Hansen - KB7PKC

Glenn, I have to agree. It should be obvious to the casual observer
with a 3rd grade education that what the courts have done in Connecticut
by giving special squealing rights to the tiny militant homosexual
lobby, they have preserved their reputation for ultra-liberal political
correctness. However, it has cost them any reputation thay may have had
for true justice, sanity of common sense. By electing idiots that make
and enforce such laws, the people of Connecticut are merely showing us
how morally bankrupt they are. After all, isn't this the same
neighborhood that sends people like Barney Frank to the Congress?!

Should we be so surprised when this kind of lunacy prevails?
ARRL should MOVE their HQ to another more sane state before this
garbage gets any worse. you know it is not going to stop with
persecuting Boy Scouts of America, Catholic Churches and ARRL
Who will be the next target? This is a movement with an agressive agenda
that is not ready to stop and rest after getting an obnoxious ad
forced into QST against peoples' wishes. Keep watching!

Ready to form state chapters of the "Murderers Ham Radio Club?"
We will be putting an ad in QST advocating that all hams join our
club and learn how to kill the people they hate without getting caught.

We will be having DXpeditions to Michigan to observe Jack Kevorkian at
work, and weekend contests to work as many members of the club that are
still alive after the trip to Michigan.

No info yet, but here's what I have found out/observed:

(first, a correction, I earlier said there is no schematic packed with the
radio, that is not true...)

Their is a MARS/CAP mod which involves removing only the back panel
(beneath the battery) and one jumper. I played with a removing a few
jumpers (not recommended for those who are not proficient soldering
micro-devices), reinitialized the radio, with no luck.

Although the YEASU company line says "No 800 MHZ", their are four large
resistors connected to the microprocessor chips on the control board. I
played around with removing these, re-initig the radio, no change in
performance. I replaced the resistors.

This leaves me with the following conclusions:

I believe the resistors on the control board DO have something to do with
additional capabilities, but I also believe there is a software
initialization which needs to take place (I tried the radio re-init, as
well as the extended receive init). I believe I removed the correct
jumper on the bottom board near the battery, but I didn't know the correct
software sequence. Soooo....

Anyone else have some inside information on this??????? I could fax
someone the schematics if they are interested in looking at the challenge
further.

The standard definition for a "code" is a direct substitution for a word
or a phrase. In the military they use such phrases as "the tiger is
out" to mean "meet at area bravo at the agreed-upon time". This is a "code".
Morse is a "code" because a series of sounds is substituted for each letter.

Encryption is a method of creating a cipher with a keyword or key phrase,
from which the clear text can be worked out by comparison with the cipher
text. Machine encryption can hide both the message and the simple fact that
there _is_ a message.

The FCC does not want amateurs to use either of these methods and has
created regulations to that effect.

> If your data stream is easily identifiable as
> legitimate traffic, i.e. easily decoded and checked, there is no problem.

This would only occur if you use "standard" codes; the "Q" signals come
to mind. Privately agreed-upon codes by individuals would not be legal.
I'm not sure if compression techniques couldn't be ruled illegal. It was
only a few years ago that the FCC allowed us to use ASCII, after all.
Technically, just saying "go to our usual" is a code substituting for
"QSY to 146.52" if both of you have agreed that your "usual" is 146.52.

> If you encrypt your data you may well be sending commercial traffic or
> espionage ;-). This would be particularly true with PGP since (supposedly)
> even the NSA can't crack it.

Both codes and ciphers are illegal. PGP is illegal even if NSA could crack
it (and I wouldn't bet they can't).

3988. license renewal question

Newsgroup: rec.radio.amateur.misc

My license expires in a few months, and getting a form 610 from the friendly candy company was working its way to the top of my to-do list. Then in the mail comes a letter from "The W5YI Group, inc" telling me that they have the FCC database and reminding me to renew. They also enclosed a 610 and a return envelope to them. For a "mere" $5 fee, they would file it for me with the FCC, and they will send me confirmation that it has been submitted. They imply (without actually saying so) that renewals can only be done thru them.

Is there truly any need for this? Can't I just mail it directly to the FCC at the Gettysburg PO Box? Seems like a way to make W5YI richer by a few dollars. (And a few dollars times lots of renewals can add up to REAL(tm) money.)

BTW, what is the Gettysburg box number? Aren't the fees for license renewal (ham licenses anyway) a thing of the past?

: Sorry to bother you folks, but I'm looking for some helpful advice from
: responsible radio operators.

No bother, I hope we can help

: having a problem with a neighbor who is running, I surmise, an illegally
: overpowered CB transmitter. The problem is that I've been picking up
: (REAL LOUD) his transmissions on two stereo systems and two
: telephones (one cordless, one not). For what it's worth, he's usually a bit

: clue. I have called the FCC once & got the standard issue publication
: explaining how it's all my fault.

It may not be your fault, but the cure will be up to you.

For your stereo system, run shielded wire to your speakers and ground
the shield to your receiver chassis. This will keep your speaker wire
from acting as antenna.

As for the cordless phones, a telephone line filter obtainable at
Radio Shack should help there. Again, your phone line is the antenna.

Unfortunately, cordless phones have very broad receivers. Although
their transmitters need to meet FCC specs., a receiver is a receiver.

Hope that helps somewhat. John jlamar@yrkpa.kias.com

Bulletin 353 OPS - We Wait, But No Calls 3/4
Release Date: November 21, 1994

Until there is established rapport between the agency and the
Radio Officer, it is unlikely there will be a request to
"activate the RACES". It isn't likely to happen until the agency
people perceive a benefit not unlike the one that the sheriff
gets when he calls out a Search and Rescue unit.

The time to build rapport is long before there is an emergency.
It begins by the Radio Officer going into the agency regularly to
become acquainted on a work basis, not over a cup of coffee. The
Radio Officer MUST prove quiet professional interest in the
agency. It is done by doing tasks at the agency one or more days
each week for several hours. If the Radio Officer cannot do that,
then the Radio Officer should find those who can and delegate
that role in order to build the needed relationship.

Do whatever task would help out, no matter how remotely
connected; for radio communications do not occur until there is
successful interpersonal communications. Do whatever professional
standards would permit but never cheapen one's self or the unit.
Do anything of interest to self, or someone in our unit, whether
it be to install a radio in a truck, layout a brochure, clear up
the file system, or fix a computer problem. If you can't fix it,
find a volunteer computer specialist and solve the need.

What does all this accomplish? It puts the volunteer unit leaders
in the agency long before there is ever a possible need for a
"call out". It shows the agency benefits. You see, in many
agencies, when it comes to communications, they don't know what
"communications specialists" do. They don't know if they need a

"shadow", a backup radio, or people at a particular place with handheld radios reporting on levee conditions, etc. They don't know what they need until you supply it for them and they realize they didn't have it before. The day comes when the agency person says "Joe, can your people do.....?" And the response is "Sure, how soon do you need it and where?" Then the Radio Officer makes certain it gets done even if there isn't an inkling of how to do it at the time. As a doer, the job gets done. THEN, they know! After that, the no "call out" problem is usually replaced with an active involvement. The agency and the unit move into the future, enjoying it together!

Our friend Gary Coffman writes:

GC>frequencies. That has traditionally meant first on frequency has the
GC>right of way, the only exception being emergency traffic, which always
GC>has the right of way. Now first on frequency *doesn't* mean he who has
GC>used the frequency off and on for years. Rather it means he who is first
GC>using a frequency at a given time. I take that to mean that if his
GC>broadcast starts before your net, you have to give way. OTOH, if your
GC>net starts before his broadcast, he has to give way.

Not if they can't hear each other at the beginning of the transmissions
and then the band changes. This is frequently the case, and causes
no small amount of friction on the ever changing HF bands.
However, THIS is the very challenge that makes amateur radio what
it is an always has been; a gentleman's hobby/service. For those
whose only goal is to quarrel, we need to remind them that it is
only a hobby. If all it does is raise their blood pressure instead
of finding ways to work together, then they should take up something
more relaxing, like ornithology, for example!

GC>However, W1AW has set a different precedent that muddies the waters.
GC>They've maintained that they can come up on top of another amateur
GC>simply because they publish a schedule. They assert that the mere
GC>publication of a schedule gives them some sort of ownership rights
GC>to the frequency at specific times. K1MAN is taking advantage of
GC>this precedent with his operations. The only way to deal with K1MAN
GC>is to make W1AW also adhere to good amateur practice by first listening
GC>for a clear frequency before transmitting. As long as they decline to
GC>do this, and defacto define good amateur practice, K1MAN is in the clear.

Interesting, I didn't realize that was the case with W1AW.

GC>As to K1MAN's felony assertions, he's probably blowing smoke. All
GC>he can legally claim is violation of 97.101(d) willful or malicious
GC>interference with another station. Violation of that rule is not
GC>typically a felony. Typically it is a subject for administrative
GC>action, though continued violations *can* be treated as felonies
GC>under the Communications Act of 1934. So if he wants to press hard
GC>enough, he may have a case thanks to the W1AW precedent.

I think it was the other guy who brought this up and used the word
"felony." Where did you hear K1MAN accusing him of that?

Bulletin 354 OPS - We Wait, But No Calls 4/4
Release Date: November 28,1994

Let's assume that there is an emergency in progress in the local community and the unit hasn't been "called upon to help". What can the Radio Officer do besides wait?

Assuming a relationship has been established but not that described in bulletin 353, go into the agency as soon as possible! Arrive at the agency in clothes similar to what the others are wearing. As Radio Officer you don't know? Well you've not been there enough and that is the real problem! If they wear sport shirts, okay. If they wear a tie, you wear a tie. Leave radios, swatches, radio club clothing, badges and other ornaments in the vehicle. Go in looking like a professional of equal status with the staff. BE PROFESSIONAL, but quietly. Softly does it. Don't arrive with the idea that you are THE solution to their problem. With that attitude YOU will be the problem, and they don't need another one! Size up the situation and at an appropriate time and place quietly ask "How can I help?" Or, modify it with, "Would it help, Mary, if I did such and such?" Expect an answer in response, but recognize they may be under high stress, shorthanded, foul tempered and just balled out by the fire chief for not doing something that wasn't their job anyway.

Once you've got a job to do, whatever it is, DO IT one thousand percent, no matter how far removed it is from operating a radio! In one such situation it was three days before the question "Could you use the radio to....? Before that it was just helping, none of which was communications related on the surface. Yet, it was helping the agency and was therefore indirectly related by

way of interpersonal communications as well as people helping people in time of stress.

In writing this, it is recognized that there will be some who won't understand it and will misinterpret it as "polishing the apple", which it is not. It is the very opposite, demonstrating professional competent ability to assist where assistance is needed. It is the basis upon which trust can be built between the Radio Officer and the agency. What is important is that it's necessary to instill respect, reliability and quiet confidence in the minds of the agency people before they may want the unit people around. This is one way of doing that. End of series by Cary Mangum, LL.B., JD., W6WWW, Chief State Radio Officer.

"There is much for which to be thankful on this Thanksgiving". May that for which you are thankful increase abundantly in the days to follow. Cary

Bulletin 355 MIS - Volunteerism?
Release Date: December 5, 1994

The following is extracted from the CAP News:

"The only gift is a portion of thyself." In this incredibly short sentence, Ralph Waldo Emerson captured the true essence of what volunteerism is all about. In an interview with my hometown newspaper, Cadet Nicholas S. Vazzana, 1993 Civil Air Patrol Cadet of the Year, was asked what is the greatest, most significant thing CAP has taught him? His reply centered on the importance of volunteerism.

"I would probably say the value of volunteerism is most important, at least in this country. It's amazing the kind of effort that a few people you could think would do anything --- putting their efforts and resources together --- can accomplish," Vazzana said.

Volunteerism is that wonderful state of mind that urges each of us to step outside our daily lives. It propels us to act when we perceive a need. Volunteerism somehow reminds us that even though our actions may not always be selfless, there is a great reward in accomplishing a worthwhile task.

The American Red Cross has established "10 Principles of Volunteerism."
1. We can broaden our nation's volunteer force by removing barriers to volunteering.
2. Volunteers are not "free."
3. Volunteers contribute more than meets the eye.

4. "Volunteer" does not mean "amateur."
5. Volunteers and the organizations they serve must meet each other's expectations.
6. Volunteers must never (ever) be exploited.
7. Volunteers make excellent middle and senior managers.
8. When recruiting volunteers, it is more important to place the right person in the right job than to attract volunteers at random.
9. We can help shape government policies on volunteerism.
10. Everyone benefits when nonprofit organizations collaborate.
---Chaplain Colonel David R. Van Horn, Chief of Chaplains, Civil Air Patrol, Auxiliary of the U.S. Air Force

Bulletin 356 OPS - Wildfire Roles 1/2
Release Date: December 12, 1994

From a report by Tim Low, N6ZUC.
The Santa Anas are hot, dry winds that have their
beginnings in Colorado.
As they move west, picking up speed in the mountain passes, they
lose their moisture. By the time they arrive here in southern
California, they are very strong and very dry.
Just before 7 a.m. my RACES group was called out to
provide communications for the Escondido Police and Fire
departments. I had been monitoring our RACES repeaters and heard
the call out for Strike Teams for animal rescue. The fire was big
and out of control, being fanned by gusts of 50 miles-per-hour or
more. I knew it would be a long and nasty one. Animal Rescue was
busy transporting domestic animals and pets from the fire path.
The county EOC, located in the San Diego Sheriff's Department,
was acting as a communications center, coordinating the efforts
of all RACES personnel, Animal Rescue, ARES/Red Cross, and
ARES/Salvation Army.
Shortly after 9 a.m. I received word via Amateur Radio
that the fire was moving rapidly into the city and that
structures were in danger. I informed Police and Fire, which
immediately dispatched personnel to the area and began fire
fighting and evacuation efforts. Through the quick response to an
Amateur Radio operator's call, property as well as perhaps lives
were saved. All danger to the Escondido area passed by mid
afternoon.
On day two another fire advanced on the city of Poway. We

had RACES observers stationed along the fire front feeding
reports on its movement. These were fed to the county to help
the fire fighting teams coordinate their manpower.
On day four I was called to see if I could find personnel
to relieve the tired Amateur Radio volunteers providing
communications for the Salvation Army at the Wild Animal Park and
the Army's headquarters in Escondido. I took off my RACES badge,
put on my ARES badge and went to work finding licensed Amateurs
to fill the need. Through this whole ordeal, I was very gratified
to find so many unselfish people willing to provide support.
By day 5 the fire had been contained and fire units were
beginning to be sent home. At this time all RACES, ARES and
Animal Rescue volunteers were ordered to stand down. For the many
Amateur Radio people involved in the effort, it had been a long
battle.
Continues next week.

RACES Bulletins are archived on the Internet at ftp.ucsd.edu in
hamradio/races or in hamradio/packet/tcpip/incoming and can be
retrieved using FTP. The opinions stated are those of the author of
the bulletin and not the poster.

3995. Learn Morse Code: 5 wpm in 5 days (article)

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-11 19:26:57 UTC
From: CASSIDY@saturn.rowan.edu
Message-ID: <3cfjq1$9cp@gboro.rowan.edu>
Source record: 255134

I am writing the following article for my local ham rag. I'd like to toss it into cyberspace for net.wisdom before the final draft gets sent out. -- if i'm gonna get flamed, i'd rather get flamed by you guys than the folks in my club :-) questions and comments are very welcome. and if you're interested in printing the final version in _your_ local rag, that's fine too, just let me know first so i can send it to you and send me a tear sheet. thanks. article follows.

5 WPM In 5 Days:
No Problem

by kyle cassidy (kb2rvy)

I will admit that although I have always wanted to learn Morse code, it was a desire hidden deep in my head, far behind things such as cleaning out the garage and learning to bake bread. It was the FCC's altering of the rules on February 14, 1991 to create the so called "codeless technician" license that finally got me to take the plunge and get a ham ticket. After my new license arrived, I found that a lot of older hams were glad to have me among their ranks, were friendly, enthusiastic and helpful. But just as many I realized, weren't talking to me because I didn't know the code. I had cheated, and taken the easy way in.
20% of all licensed hams today are codeless technicians and in 1994 for the first time, technician class licensees outnumber general class licensees. It is the FCC's desire that once someone gets a class of amateur license, they will seek to upgrade it in exchange for greater privileges. This is, of course, known as "incentive licensing".
Although I didn't have any equipment other than the obligatory 2 meter HT, I started thinking more seriously about learning the code, I had another incentive to learn the code, more for purposes of social redemption than anything else. I mentioned this at work one day and one of my colleagues (who isn't even a ham) said "I can teach you Morse code, 5 wpm, in 5 days, and you won't have to work at it." I thought about this. There was indeed a hamfest that weekend where I could take the test. What the heck, I figured, I'll take the test and if I fail, it's no big deal. Well, I didn't fail. True to his word, Leigh taught me to send and receive Morse code at the rate of 5 wpm in five days and I didn't have to work at it. Here's how you can to:

o Lesson one at lunch that day I learned the letters EISHTMO. These letters are the simplest to learn, (one dit, two dits, three dits, four dits, one dah, two dah's, three dahs, respectively). Inside of about five minutes I had learned a quarter of the letters in the alphabet. If only the rest of them would be so easy.

o Translate everything you see into code. Start out with the letters you know, find them. Stop signs are no longer stop signs to you, they are "dit dit dit, dah, dah dah dah, dit dah dah dit" signs. Your friend Bob is no longer Bob, he is "dah dit dit dit, dah dah dah, dah dit dit dit" (although keep this to yourself, unless your friends are all hams you may weird them out by beeping at them during lunch). It doesn't take any time out of your day to do this and it allows you to turn your afternoon into a study session and still get work done.

o Get one of your ham friends to loan you an old straight key and keep it on your desk, or your kitchen table, or by the television or the bed. Whenever you find yourself with two spare minutes, tap out a few words and letters, peoples names, book titles. You can do it while you're watching T.V. or reading the newspaper (don't do it in bed though, unless you live alone, it might get you into trouble.) You want this to become an unconscious activity. Who cares if your code is sloppy? If your dits and dahs sound somewhat similar, of if your dahs are eight times as long as your dits and irregularly spaced? The point is that you're doing it and the more you do it, the better you will get at doing it.

o Keep a sheet of paper in your pocket with the code written down on it. While you're walking around and translating things, if you can't remember a letter, look it up on your sheet of paper. Keep one on your desk at work so you can always reference it quickly. Try to wean yourself from the sheet of paper as quickly as possible.

o Get the Gordon West audio tapes, Learning Morse Code. If Radio Shack doesn't have them, one of your friends does. The set includes four tapes, the first two for five WPM and the last two help you get to 13 for your general. A lot of people think that using Gordon West's stuff is like cheating, and it is. He makes things very easy to understand and doesn't deal with superfluities. Although he's not as funny as he would like to believe, he is not entirely stoic either. Listen to the first two tapes (total running time 3 hours) and if you get a chance, the first side of tape 3 -- Code Building Speed, which is supposed to take you from 5 to 10 wpm. And don't say you can't find three hours over the course of five days to listen to tapes. You might have to stop watching T.V. for a couple of days, but those are the sacrifices you've got to make.

o On your 5 wpm test, you will hear all 26 letters, every digit between 0 and 9, as well as punctuation. The period, comma, question mark, slash (DN), break (BT) and end of message, end of work signs (AR) and (SK) will all make an appearance on your test. This is a total of 42 characters. Of these, the most common, obviously, will be the letters. You may see the letter "e" 14 times and the comma only once. One thing you can do to make things simpler for yourself is to ignore the punctuation.

The numbers are relatively easy and at 5 wpm you can count dits and dahs (be forewarned though, this will not work at higher speeds.) All the punctuation marks are considerably longer and more complicated than either the letters or numbers and as such, easily recognizable as punctuation. On your test, you can just mark them all down as dashes. Although you probably find punctuation useful for QSO's on HF, on your test you can get by without it

o Pick a testing date and commit to taking the test, regardless of how well you are doing on the code. Having a goal serves to focus you, after all, no one wants to take this test more than once.

o Listen to other sources. If you've a computer, you can get programs which will translate text files into code, or give you random characters to copy. You may also have friends with HF rigs who would be more than happy to let you listen to QSO's down on the novice portion of the HF bands where folks routinely chat at 5 wpm. This is quite a bit more exciting than listening to computers or tapes.

o Your VE can give the test one of two ways, either looking for one minute of perfect copy (five words with no errors), or by giving your a 10 question multiple guess exam. Take the multiple guess.

o Don't worry if you're not copying at 100%. 70% accuracy is more than enough to pass the test with flying colors.

o Don't stop! Just because you've done 5 wpm doesn't mean you can throw in the towel. There is another testing session 30 days away and if you keep at it, you can be at 13 wpm by then. When you pass your 5 wpm test, you can immediately get on the air, which is certainly the best way to learn.

You have to make a commitment to learn Morse code, but if you actually want to learn it, it's not a problem. 5 wpm is very easy. 20 minutes a day listening to tapes, computer generated code, or actual HF, coupled with continual practice throughout your normal day will get you there in under a week. It's actually easier to learn the code in five days than it is to learn it in five months. For five days, even the least dedicated of us can tuck in our belts, grit our teeth, and work through it. I'll be listening for you on HF.

GC>>how about after a big hurricane wipes out a city?
GC>>will these services be able to handle a couple of hundred of percent over
GC>>load?

GC>As I noted in another post, some of the equipment providers intend to
GC>offer phones that will automatically switch from micro-cellular to
GC>regular cellular to satellite cellular depending on what resources
GC>it finds available in your calling area. The phone companies already
GC>have the capability to shed non-essential callers from their systems
GC>if overloads occur. As cellular type systems become the backbone of
GC>emergency communications, I expect the emergency services providers
GC>to work with the phone companies to make sure *their* phones get
GC>priority. That's simple to implement in the new digital systems.

Fine, except that the system will probab;y to continue to be TOTALLY
hobbled by the fact that it is limited to simulating a LL telephone
and you can't talk to another cellular user unless you know his phone
number, and he happens to have his radio (aka cellular phone) turned on,
or has paid for some messaging and retrieval service on his line.

Hardly a practical system for handling emergencies! Give me a 2m FM
rig any day if life is at stake!

GC>>how will anyone know who to call?

GC>The emergency services providers will establish key numbers for their
GC>workers to call. Likely, the numbers will be pre-programmed into their
GC>phones. My portable has a 99 number memory. I doubt most emergency services
GC>people need more than that.

A future promise doesn't help much with the present reality.
There is no guarantee that these services will be any more useful
than the present 911 operators that let people die all the time
rather than dispatch a police officer to the scene.

GC>>will any of these services provide for a "radio mode" of operation?

GC>Think *conference bridge* or *custom calling*. That old technology
GC>now works much better when implemented on a digital switch. Full
GC>duplex, no doubling, it's much better than radio nets, and is fully
GC>configurable on the fly. You can setup as many independent sub-nets
GC>as you need, and you can crosslink any selected individual to more
GC>than one conference bridge as needed for liaison work, all at the
GC>touch of a few TT buttons.

Try that now while you are driving down I-95 and wish you could talk
to another driver on the road with your expensive cellular transceiver!
Ma Bell is watching and she wants a slice of your wallet first!

GC>Where does that leave hams with our antiquated technologies? Out in
GC>the cold if we don't get with the program and update our skills and
GC>techniques.

So why aren't hams using converted cellular phones for QSOs on
a ham cellular network at 902 MHz??? Seems like that with
just a bit of simple programming we could do it, and there is a glut
of used repairable cellular phones out there.

GC>We can establish self-configuring and self-healing network
GC>topologies. We can make use of trunked and cellular techniques. We
GC>can cross train on other service's systems. But will we? Or will we
GC>be content to beep back and forth forever, exchanging postal cards,
GC>as we become more and more irrelevant to the modern world?

What are YOU personally doing to get hams involved with this technology
- other than pointing out the problem? Curious! - 73, Brian AF4K

The following is a QST

A ham radio repeater council election in California could affect repeater coordination nationwide. This is because it appears that packet radio and not repeater owners decided the outcome. Also, Israel readies for the launch of its first ham satellite and the busses are back! Find out where exclusively on Newsline report number 904 coming your way right now!

(*****
PACKET RADIO RE ELECTS INCUMBENTS IN VOICE REPEATER COUNCIL

The votes of at least four dozen packet radio operators was responsible for the re-election of Sidney Radus, N6OMS as President of Southern California's Two Meter Area Spectrum Management Association. This, in the most hotly contested election in the history of that group. And the outcome of this election impacts on all of the nations frequency coordinators. It spells an end to the separatism that has developed between the two modes over the past decade. Radus says that the outcome of this election is a sign for all modes to start cooperating fully with one another:

"We have to cooperate all the way across the band. And to know that these people are interested in us, in repeater coordination to help re-elect a group that will try to protect coordinations and work cooperatively with them I think is to everyones advantage.
We certainly appreciate the support they gave us." Radus, N6OMS

Radus and his slate of candidates, with the support of area packet operators were able to push back a challenge mounted by the San Diego based Committee for Better Amateur Radio. C BAR as it calls itself had fielded a slate of candidates headed by attorney Rick Anglin, N6KUB. While Anglin and the C BAR backed candidates almost all political unknowns, did rack up an impressive 252 votes it was not enough to best the 290 votes that Radus and his slate pulled in.
But the key to Radus win was not as much a vote of confidence by repeater owners. Rather a large turnout of repeater users and packet radio operators who saw Radus as more willing to cooperate with them to a greater degree than the San Diego based challengers. Just weeks before the election, some of the key political leaders in the Southern California Packet Radio community pledged their support to N6OMS. They then sent out area wide packet messages urging area packeteers to join TASMA, pay their dues and cast their votes for N6OMS.
We have been told that the meeting room in Carlsbad, California that was jammed to the rafters for the December 3rd meeting. It was filled with hams involved in both modes, but even they only accounted for a third of those who voted. The other two thirds voted by proxy. None the less, with over 540 votes cast, it's the heaviest turnout for a Southern California repeater council election in history. Radus says that it is a clear mandate for

Tasma to move forward with its plans:

"During the next year we're going to implement the work of our interference committee to insurance that repeaters are operating within their parameters. If there are interfering repeaters or other interference with repeaters that we can make our recommendations to the FCC on a solid basis. With good technical data." Radus.

One side note. Reports to Newsline indicate that the people most affected by the outcome of this election did not bother to show up. The majority of the area's repeater owners were definitely conspicuous by their absence at the Carlsbad meeting. The bottom line. The outcome of this election is bound to impact on repeater councils nationwide. This is because California has long been considered one of the political trend setters in FM and repeater issues, and has been since the first repeater went on the air from a California hilltop back in the late 1940's. And from now on its not going to be easy for repeater coordinators to tell packet radio to go it alone. Packet has proven that it has the political clout to leave its mark wherever it wants.
More on this part of the story in future Newsline reports.

(*****
DELAY OF VANITY

Do not look for any action on vanity ham radio call signs until the second quarter of 1995. KO6AN reports via packet radio that he personally called the FCC about the pending issue a month ago. At that time, Jerry said that was told that the issue is still under consideration and they expect something out in the spring. Translate that to mean the commission will probably announce its decision the last weekend in April. Making such announcements at the Dayton Hamvention Forum has become sort of a tradition with the FCC.

(*****
FCC CHANGES AFFECT HAM RADIO

Major changes in the structure of the Federal Communications Commission will definitely affect Amateur Radio. Come 1995 it will be a radically different FCC. Many old faces will be gone. Other unknown names will be taking their place as ham radio moves to the jurisdiction of the new Wireless Communications Bureau. The FCC's effort to get up to speed on the information superhighway includes creation of the new Wireless Telecommunications Bureau. Ralph Haller, a key agency contact on ham radio issues is now a deputy chief.

"The new Wireless Bureau encompasses a much larger scope, if you will, from what the Private Radio Bureau encompassed.

Basically my duties are unchanged." Haller.

Haller sez the new bureau groups the various wireless services differently, with the same people in the same specialties.

"The structural change at the commission, but in terms of the day to day operation of the commission with regard to amateurs, I think they are going to see a lot of the names that they are familiar with."

For the amateur community we might see more responsiveness at the commission.

"The new bureau is receiving some resources we didn't have in the past. We have better computer equipment and we will have a few more people in the bureau. So, I think if anything it should be viewed as fairly positive effects on the amateur community." Haller.

In the mean time the FCC's agenda for regulating ham radio has not changed under the reorganization.

"One big concern of ours right now, is the integrity of the license and the licensing processes. And we are monitoring that very closely with the cooperation of the volunteer exam coordinators. So I think that's one of the major areas. The other area that we are concentrating on tremendously right now is trying to implement the specialty or vanity callsign program." Haller.

And while other communications modes push technology ahead more quickly than ham radio operators, Haller says there is no way they will be lost in the shuffle.

"I don't think that there is much chance of that happening. First of all the amateurs have a long standing history for being the first on the scene in times of disaster. I think that is very well know here at the commission, it is very well known in congress." Haller.

Haller did say rival services looking for frequency spectrum will continue their focus on VHF and above.

"We have a proceeding in the 902 to 928 Mhz band which allows would allow some additional sharing with automatic vehicle locations systems and part 15 devices like cordless telephones. But the amateur service has a good reputation for being able to share with other services. So while we might see some additional sharing on some of the bands in the future, I don't think that the amateurs are going to lose bands." Haller.

Ralph Haller at the FCC's new Wireless Communications Bureau saying he is optimistic the agency and amateur radio operators will continue their long standing cooperation.

(*****
BUSSES BACK AT DAYTON HAMVENTION

A Newsline exclusive. Word that the busses will be back at the 1995 Dayton Hamvention. This, according to the event's General Chairman Ken Allen, KB8KE. Allen says that the Hamvention is responding to the needs of those who attend the show, but it won't be for free:

"As everyone is going to find out when they get their flyer, the Hamvention flyer that is coming out next week. We're announcing that the busses are back. We've made a deal with the bus company this year. What we are going to do is, the majority of the hotels, and there will be a list of hotel names in the flyer, will be selling tickets for the bus trip. Any hotel selling tickets, we will pick up, the buses will pick up in front of that hotel and take the people to the arena for the show and return them." Allen.

The cost of a round trip to and from the Hara Arena will be two dollars. Allen says that the decision to re-instate the bus service was based on the willingness of the ham radio public to help defray the cost:

"It was strictly a monetary thing last year when we trimmed back on the buses. With the cooperation of the hotels and the small fee for a round trip which we heard everyone saying they would be glad to pay. We decided to re-instate the buses this year." Allen.

On a related note, Ken Allen also says that nominating period is now open for the 1995 Dayton Amateur Radio Associations' prestigious "Radio Amateur of the Year," "Specific Achievement" and "Technical Achievement" awards. Presentation of these awards will be made at the annual Dayton Hamvention Banquet, Saturday night April 29th. For further information or to file a letter of nomination please write to the Dayton Hamvention, Awards Committee, P.O. Box 964, Dayton, Ohio 45401.

(*****
YOUNG HAM of the YEAR HOME

The Westlink Report Young Ham of the Year youth award is looking for a convention to host the recognition ceremony in 1995. Now entering its 9th year, the Westlink Report Young Ham of the Year honors a ham age 18 or younger who has made a significant contribution to the service. For further information on the award or to apply to sponsor the 1995 award presentation please write to the Westlink Report Young Ham of the Year, 28197 Robin Avenue, Saugus, CA 91350.

(*****
HPM-95

The ARRL's Membership Services Committee says that it will recommend that the highly success Hiram Percy Maxim 125th Birthday Celebration be reprised in 1995. The celebration of the birth of the man who founded the American Radio Relay League took place last September. It was immensely popular among members of the ham radio community and the committee says that it wants to see it happen again in 1995. Look for ARRL Board approval to be granted in January.

(*****
ARCHIE

The ARRL Foundation has agreed to match individual and club donations to a fund raising drive to print another series of Archie ham radio comic books. The foundation will match up to $10,000 of the $19,000 needed for the next reprint run of this recruitment tool. Donations to this fund are tax deductible, according to foundation sources.

(*****
ISRAELI HAMSAT LAUNCH SET

Some good news on the ham radio satellite scene. The launch of the Gurwin One, Israel's first Amateur Radio satellite is now set for March 25th, 1995. 4X1AS who is a member of the Gurwin One launch team tells Newsline that orbital details are not available, but the satellite will be flying piggyback on a Russian remote sensing flight. Gurwin One will carry a 9600 baud BBS "Pacsat-style" transponder with a 70 cm downlink and six uplinks, three on 2 meters and three in the 23 centimeter band.

(*****
VOA-RIP

A part of shortwave history has disappeared from the radio waves. Radio Netherlands reports the demise of the Voice of America relay station in Bethany, Ohio. Bethany is located just north of Cincinnati. It made its last broadcast on November 15th. Radio Netherlands says that the federal government intends to use the land for other purposes and the former VOA transmitters are headed for a new home in Sri Lanka.

(*****
GO-LIST TO CONTINUE

The GO-LIST of ham radio QSL managers will continue, but under new management. Jay and Jan O'Brien who have been the publishers of the "The W6GO and K6HHD QSL Manager List" have decided to retire after a decade and a half of service to ham radio. Jay has announced that Paul, N4FFO and Nancy, KB4RGW Smith, will be taking over the QSL Manager List including DX-BBS and the PacketCluster SYSOP interface.

(*****
NCJ

Also word that Bruce Draper, AA5B of Albuquerque, New Mexico has been selected as the new editor of the National Contest Journal. Draper replaces Trey Garlough, WN4KKN who retires in January.

(*****
DX

In DX, word that SM5MX who is now active from Hanoi signing XV7SW says that new legislation on amateur radio in the form it is known in other ITU countries is expected to be passed in Vietnam in 1995. In the meantime, he has been granted a license to operate as XV7SW on certain fixed frequencies. Listen for Rolf on 28.016, 28.019, 21.016, 21.019, 14.016, 14.021, 7.033 and 3.505 MHz. And sincere there is no QSL service in Vietnam Rolf will handle this chore as well. His address is Rolf T. Salme, Embassy of Sweden, Box 9, Hanoi, Vietnam.

(*****
ROBOT RADIO

And finally this note from down under. It seems that two years ago a computer temporally took over from the human disk jockey at Sydney Australia AM station 2SM. This, following a corporate takeover by a new ownership company. After a transition period of a few weeks the humans returned, and 2SM was reborn with a new program format.
Then something interesting happened. What broadcasters around the world call "the book" came out. The book is the ratings report on station listenership and guess what it showed. That's right, during the time that the computerized disk jockey was on the air the station's ratings had jumped upward by an amazing 40 per cent.

(*****

And for this week, that's all from the Amateur Radio Newsline.

Well if we all had the connections (the right *crooked* commercial ops that remove and *give* stuff away) we would all use Decibel open-dipole phased-array base antennas. But.....

Our club sported two system on a x-500 on a 5-story Hospital. Survived 5+ years before the first problem. After a heavy wind and rain, guess what! Clearing the drain-hole, and sealing the joints with electrical tape, then GE Super-Premo Silicone II did the job.

But, Mother Nature did a better job the next Spring (1994) when she decided to reach out and touch us :-(. The top looks pretty ugly now, with about 1/2 of the top 5' section shattered and slightly discolored.

Snow, cold, and winter winds never gave us any problems. (well for that matter- mine @ 40+ feet at home has survived 2 winters--hopefull more). Just Mother lightning.

If you have the money to start with, and especially if the site is relatively inaccessible- or you get to the right ham-fest early enough- The Decibel 6dbd 4-dipole units for 150Mhz are the way to go. We got lucky and obtained one for $100- not long after our other one was hit (take THAT Murphy!). Unfortunately the 450Mhz dipole-arrays are not quite as easy to find-- yet!

73 es good luck,

> >on the Internet?

to which w4qo@atl1.america.net (James C. Stafford) replied:

> If you are going to be logged in all the time to Internet (and I don't
> see how you could avoid it), then why not just open an IRC channel and
> post there. Other than some of the B&Ws that Packetcluster has like WWV
> and News, this should work fine.

> BTW I understand that at 9PM on Saturday and Sunday evenings, there is an
> IRC called RTTY open and many times I have met nice hams on #hamradio

To which I'd like to add....

An IRC channel is all well and good for real-time spotting info, but the
historical capabilities of the DX Packetcluster (i.e. 'Show me the last 25
DX spots on 40 meters") could not be duplicated on IRC, and for me, it's
these historical spots that are the most interesting.

> Mike, N4PDY

Just remember, Mike, when your daughter goes to college, gets married,
or leaves on an around the world trip, you've got a second phone line
that you can use for modeming.

SB DX @ ALLBBS $OPDX.186
Ohio/Penn DX Bulletin No. 186

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 186
BID: $OPDX.186
December 12, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WD5B, KF8VW, WD8NSD, 9K2RA, EY8MM, DL7VEE & DXNL, OM3DX & 160 DX Bulletin and VP2ML & The DX Bulletin for the following DX information.

3V, TUNISIA. 3V8BB continues to be active. Reports from the "160 DX Bulletin" indicate that the club station was active on 160 meters. The bulletin also states that a native operator named Mohamed is now active using the club station. Last week's spots were 7006 kHz at 2315z, 21290 kHz at 1500z and 14022 kHz at 1415z. QSL via JF2EZA.

9K, KUWAIT. 9K2MU has been active 3792 kHz around 0100z. George, DJ9LJ, has been with him to help control the pile-ups. QSL via WA4JTK. Meanwhile, a group from the "Kuwaiti Radio Amateur Society" will operate from the island of "Fialka", which is located about 25 km northeast of Kuwait City. The operators 9K2QA, 9K2VV, 9K2GM, 9K2IC, 9K2DB, 9K2DR and 9K2YJ will be active from December 15-18th, using the callsign 9K2F. Suggested frequencies: 3750, 7052, 14195, 18140, 21300, 24940 and 28450 kHz. There will be a special QSL card available. QSL direct to 9K2RA with 2 IRC or equivalent.

ANTARCTICA. Gavin, VP8GAV, has moved on to another British Base. He is currently at Fossil Bluff Base. He can usually be found with a loud signal on 14024 kHz after 2300z. QSL via GM0LVI.
Eddie, VI0ANT, active from one of the Australian bases, has been active on RTTY. Look for him around 14083 kHz between 0100 and 0200z, and again between 1300 and 1500z. Eddie was expected to erect a beam antenna over the past weekend if the weather was good. QSLs for VI0ANT go via his home call VK4EET, Eddie DeYoung, 131 Plantain Rd, Shailer Park Q 4128, Australia.

EY (ex. UJ) QSL BUREAU. Nodir Tursoon-Zadeh, EY8MM, the Vice-president of TARL, informed OPDX that the Tajik Amateur Radio League QSL-buro (EY/ ex. UJ) is Box 303, Glavpochtamt, 734025, Dushanbe, Tajikistan.

He reports that during the past 2 years they have not receved any QSLs from Box 88, Moscow. He recommends not to send cards to the Box 88 service for EY cards.

OH0 & OJ0, ALAND ISLAND AND MARKET REEF. Pete, N0AFW, will be visiting Finland from mid-December to mid-January. He plans to operate for a few days as OH0/N0AFW near the end of his stay, mainly on the WARC bands and lower bands. If transportation can be arranged and the weather can cooperate, Pete will also be active as OJ0/N0AFW for a few days between January 10-15th.

VP8, SOUTH SHETLANDS. The DXNL reports that starting in mid December Henry, SP3FYM, will be on the air as HF0POL (presumably) until the end of 1995. He will emphasize RTTY and 160 meters.

JD1, MINAMI TORISHIMA. Ishi, JI7BCD, is currently active as JI7BCD/JD!1. His length of stay is unknown at this time. Activity over the past week has been on 40 meters CW. Check around 7010 kHz starting around 1030z and as late as 2345z. There has been two reported QSL routes: 1) JARL or 2) S. Ishizawa, 13-40 Sakuragichou, Mutsu, Aomori 039-51, Japan.

KP4, PUERTO RICO. Rich, WD5B, will be going here on January 6th for ten days. He will have a couple of days where he would like to operate on 160 and 80 meters while there. There was no special callsign or operating schedule mentioned.

VP8, FALKLAND ISLANDS. Dave, VP8BKT, has been heard this past week on 18153 kHz around 1830z. He has also been heard on 14184 kHz between 0000 and 0300z, and on 21290 kHz starting around 1700z. VP8CMP has also been active on 21290 kHz between 1300 and 1500z.

ZC6, PALESTINE. On Sunday December 11th, at approximately 1430z, a station was heard on 14243 kHz signing ZC6B and was stating he was operating from Palestine. The station was reported to be very weak in signal strength. Also, Dr. Selim, OE6EEG, was also on the frequency running a list of stations to work the ZC6B station. He was also heard stating that he would run a list operation every Saturday and Sunday starting at 1400z on 14243 kHz for the ZC6B station. The station's operator and QSL route is: Dr. Sami Tarazi, Box 1008, Gaza, Palestine via Israel. According to Dr. Selim, the paperwork for this operation has already been sent to the League. EDITOR'S NOTE: ZC6 was deleted from the DXCC Countries List as of July 1, 1968. Also, the allocation list of international call signs shows that the prefix for ZC6 is allocated to the United Kingdom of Great Britain and Northern Ireland. (From the ARRL DXCC Countries List, July 1994)

ZF, CAYMAN ISLANDS. JH1ROJ will operate as ZF2RO from Grand Cayman Islands from December 29th to January 5, 1995. Activity will be on 80-10 meters SSB and CW. QSL via JH1ROJ, 4-9-31, Naka-Aoki, Kawaguchi, Saitama, 332 Japan.

KEEP THOSE BALLOTS COMING! Ballots for the Fourth Annual OPDX/NODXA DX Survey can be found in OPDX.184. Ballots can be sent to the following

packet and online addresses listed below.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

Hi Jim, unfortunately even though he has satisfied the treaty requirements
if he can't pass 13wpm CW test, he is barred from accessing most of the
public HF frequencies occupied by amateurs. Private barring, I understand.
Even though some hams consider "their frequencies" as their own private
playgrounds, the fact remains that those frequencies are public property
and CW skill is no longer a good screening mechanism for potential hams.

Hi Alan, I have often wondered, can a human being send 5wpm-18 Farnsworth
with a straight key? I've only ever heard Farnsworth used with machine-
generated code.

SB ALL @ ALLBBS $OPDXNODXA.2
OPDX/NODXA 1994 DX Survey

THE FOURTH ANNUAL OPDX/NODXA DX SURVEY FOR 1994
Here is your chance to be counted. Deadline will be January 31, 1995,
with results in February. The questions of the survey will deal with:

1) The DXer of the year. This is a DXer who you thought was outstanding
in operating and handling the pile-ups from their DXpedition.
2) DXpedition of the Year (Group and Indivdual). Choose the best and most
well organized DXpedition that met the needs of the DX community.
3) The 30 Most Wanted Countries. Choose your 30 most wanted countries.
4) OPTION: Your personal comments about DXing in 1994.

Please use the ballot below. Votes will only be accepted in the
following format below.

```
---------------------------------------------------------------------
Your | DXer of the Year| DXpedition of the| DXpedition of the
Callsign | (Person) | Year by a person | Year by a group
and QTH | | |
---------------------------------------------------------------------
CHOOSE YOUR MOST WANTED COUNTRIES. (Please list only 30 of your most
wanted countries. List CW and SSB modes separately.
CW - AB,CD,EF
SSB - GH,IJ
---------------------------------------------------------------------
I work: [ ] only CW [ ] only SSB [ ] both CW/SSB
---------------------------------------------------------------------
Comments on DXing in 1994: (Text Any Length)
---------------------------------------------------------------------
```

* Just Fill-in The Blanks And Send It To One Of The Three Address:

: can not be completed as dialed, etc."
: I tried the same thing with my HTX-202 and it all works fine, so there
: is not likely anything wrong with the autopatch.
: 73 de Dave, VE4DCD

Your Kenwood could be sending the tones faster that your local phone company can decode them. The HTX-202 has two DTMF speeds. When sending
the control codes for the repeater, I need to slow the tone speed down.
I would hope your Kenwood has the same option. Not all phone
companies use the same equipment. Give it a try.

4010. FT-51R Mod # 1

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-11 23:19:21 UTC
From: marcbg@metronet.com
Message-ID: <marcbg-1112941719470001@net49.metronet.com>
Source record: 255147

OK, here's the first one I found, gives you rx/tx 140-174 MHz and rx/tx 420-470 MHz:

DISCLAIMER: PERFORM THIS PROCEDURE AT YOUR OWN RISK. THE POSTER(S) OF THIS PROCEDURE ASSUME NO LIABILITY, AND THIS PROCEDURE IS POSTED FOR GENERAL INFORMATION ONLY. THE FT-51R RADIO IS NOT FCC-TYPE ACCEPTED FOR TRANSMISSION OUTSIDE OF THE AMATEUR RADIO FREQUENCIES. THIS MODIFICATION ENABLES TRANSMISSION ON FREQUENCIES OUTSIDE OF THE AMATEUR RADIO BAND, AND IS LEGAL FOR THOSE INDIVIDUALS WITH MARS/CAPS CERTIFICATES. THIS MODIFICATION REQUIRES THE USE OF A LOW POWER FINE TIP SOLDERING IRON. INDIVIDUALS WHO ARE NOT EXPERIENCED WITH SOLDERING OF SURFACE MOUNT TECHNOLOGY SHOULD NOT ATTEMPT THIS MODIFICATION, YOU COULD RUIN YOUR RADIO.

1. Remove the battery pack from the radio.

2. Remove the four screws directly beneath the battery pack on the radio.

3. Remove the two screws holding the contact portion of the battery compartment.

4. Remove the screw and battery pack release lever.

(the following steps make removal of the battery holding compartment easier)

4. Remove the four screws on the bottom portion of the back of the cabinet. Carefully remove the two halves of the radio. Pay attention to the gasket as you are seperating the cabinet.

5. Remove the battery pack holding compartment.

The section you will know be working with is directly underneath the battery pack holding compartment (behind the touch tone pad).

6. There is a ribbon cable connected to the control board. You can leave the ribbon cable attached if you're a GOOD solderer, or you can release the two little black levers on each side of the ribbon cable and CAREFULLY slide the ribbon cable out of the socket and hold it back towards the case with a piece of tape. Be careful not to put a bend in the ribbon cable or pierce it.

7. Locate a set of etched jumpers on the pc board. They are located adjacent to the bend in the ribbon cable. They are not marked, and are situated as follows (o-o indicates closed, o o indicates open):

JP1001 o-o
o o JP1005
JP1002 o o
o o JP1006

JP1003 o o
o-o JP1007
JP1004 o-o

8. Using solder wick or your preferred method of solder-removal, carefully remove the jumper for JP1007. This enables the 134-174, 420-470 MHz transmit.

9. Reassemble the radio, remembering to reinstall the gasket, and to carefully reinsert the ribbon cable if you removed it from the socket, and fasten down the little black socket locks.

10. Press the MHZ /\ and MHZ \/ buttons simultaneously while turning the power on to the radio. This enables the modification.

Some notes: I experimented with removing JP1004, and it had no apparent effect. I did not experiment with any of the other jumpers except JP1007. There still may be 800 MHz receive buried some where in the radio, the Japanese version has 800 MHz receive. An earlier posting of mine indicates four large resistors (well, non-surface mount) connected between various microprocessor and memory pins, clearly an add-on. Experimentation with removing these produced no effect, HOWEVER, this was prior to my discovery of the JP1007 mod. I've played with the radio enough now, and don't want to push my luck, so let's let someone else try to find out if there are any more secrets buried in this fine piece of gear.

ANARTS NEWS BULLETIN 839 11th December 1994.

SUNDAY BROADCAST SCHEDULES.
3.545 MHz Plus/minus 3 0930 UTC VK2BQS (Jim)
7.045 MHz -3 0030 UTC VK2CTD (Col)
14.070 MHz (amtor/fec) 0030 UTC VK2DPM (Alan)
14.091 MHz 0030 UTC VK2BQS (JIM)
146.675 MHz 0030/0930 UTC VK2JPA (PAT)
144.850 MHz (ax25 bbs) VK2JPA AT VK2AAB
146.675 MHz (rtty mmbbs/repeater) VK2RTY

Enquiries to the society should be addressed to
the Secretary A.N.A.R.T.S., PO Box 860, Crows Nest,
N.S.W. 2065, accompanied by s.a.s.e., or to VK2JPA at
VK2AAB. if you have any news or information for
inclusion in a subsequent broadcast then please send to the
Broadcast Officer, PO Box 60 Blacktown 2148 or address to
VK2JPA at VK2AAB on 144.850 MHz.

Views expressed in this news bulletin are not necessarily
those of the Broadcast Officer, the Relay Officers, or of the
Society.

Reminder of holiday dates for ANARTS

The ANARTS broadcast will go into recess after 18th December
and resume on 15th January 1995.

If you have any last minute news items to go out before
Christmas, send them to the Broadcast Officer ANARTS P.O. Box
860 Crows Nest 2065 by last post on 16th December.

We will see you again on January 15th, refreshed and raring to
go.

ARRL RTTY Roundup Contest 7th - 8th January 1995

Editor's note.
While this is regarded by the US as a domestic contest, it
could be fun to see how many states one can work. In past
years all states had at least one RTTYer on air, and if the

skip is right and conditions hold -- why not try?

Contest period- starts at 1800 UTC Saturday and ends at 2400 UTC Sunday. Operate no more than 24 hours of this 30 hour period. Two rest periods (for a combined total of six hours) must be taken in two single blocks of time, clearly marked in the log.

Bands- 80, 40, 20, 15, and 10m (five bands).

Modes- Baudot (RTTY), ASCII, AMTOR, or Packet (attended operation only).

Operator classes- a) Single op, unassisted, all bands
1) less than 150 watts output
2) more than 150 watts output.
b) Multi op., single transmitter. Once
station has begun operation on a given band, it must remain on that band for at least 10 (ten) minutes.

Exchange- U.S. stations- RST and state. Canadian- RST and province. All others- RST and serial number, starting with 001. Both stations must recieve and acknowledge complete exchange for QSO to count. Neither cross-band nor cross-mode QSOs are permitted. Packet QSOs through digipeaters or gateways are not permitted.

Remainder of rules next week

NOTES OF INTEREST.

ANTARTICA, IA1 AND VI0. DURING THE MONTH OF DECEMBER, LUCIANO, I0JBL WILL JOIN FILIPO, IK0AIH AT THE ITALIAN ANTARTIC BASE. THEY PROBABLY WILL USE THE CALL IA0TPS. ALSO, EDDIE, VK4EET IS CURRENTLY ACTIVE USING THE CALLSIGN VI0ANT. HE SHOULD BE THERE UNTIL THE END OF MARCH 1995. EDDIE WILL WORK RTTY ON REQUEST.

CHATHAM ZL7. RON, ZL1AMO WILL BE ACTIVE FROM HERE, 10-20 DECEMBER. CW/SSB AND RTTY. QSL ZL1AMO.

FOR NEXT WEEK'S BULLETIN, SEND YOUR BANDPASS AND NOTES OF INTEREST TO LUCIANO, I5FLN AT I5FLN.ITOS.ITA.EU

REMEMBER, DX DON'T SLEEP.
GL DE BOB, WB2CJL AT W5KSI.#NOLA.LA.USA.NA

ARLD072 DX NEWS

THE ITEMS IN THIS WEEK'S BULLETIN ARE COURTESY OF TEDD, KB8NW, STEVE, KU9C, THE OPDX BULLETIN, THE YANKEE CLIPPER CONTEST CLUB PACKETCLUSTER NETWORK AND THE CONTEST CORRAL COLUMN FROM THE PAGES OF QST MAGAZINE. THANKS.

UNITED ARAB EMIRATES. THE PTT HAS APPROVED THREE MORE LICENSEES, ALL GRADUATES OF A RECENT TRAINING SESSION AT DUBAI MEN'S TECHNICAL COLLEGE. LISTEN FOR NEWCOMERS A61AH, A61AI AND A61AN.

ANTARCTICA. EDDIE, VK4EET, IS OPERATING AS VI0ANT AND IS EXPECTED TO BE STATIONED THERE THROUGH MARCH. LISTEN FOR HIM BETWEEN 1130 TO 1630Z, PRIMARILY ON CW, THOUGH HE DOES OPERATE SOME SSB. RTTY AND AMTOR CONTACTS ARE AVAILABLE ON REQUEST. TRY 3502, 7005, 14005 AND 21005 KHZ FOR CW, AND 3798, 7070, 14190 AND 21295 KHZ FOR SSB. QSL VIA VK4EET. OTHERS ARE ALSO ACTIVE. PHIL, VK4FPS, IS ON AS VK0FPS WITH SSB AND DIGITAL MODES. QSL VIA VK3MA. LANCES, VK7ERZ, IS ON AS VK0ERZ WITH CASUAL SSB RAGCHEWS.

CHATHAM ISLAND. LISTEN FOR THE CW OF RON, ZL1AMO, BETWEEN DECEMBER 10 AND 20. THOUGH PRIMARILY A CW OP, HE WILL ALSO OPERATE SOME SSB AND RTTY.

MALDIVES ISLAND. TOM, DL7UTM, AKA H44XO, 3D2XO, T21XO AND Y31XO, WILL BE SIGNING 8Q7XO BETWEEN CHRISTMAS AND YEAR END.

MALTA. BIRGIT, DL7VTZ, AND HOLGERT, DL7VTM, WHO WERE 9I2M AND 9I2Z EARLIER THIS YEAR, ARE PLANNING TO OPERATE FROM MALTA FOR TWO WEEKS SOMETIME IN MARCH 1995.

BARBADOS. MARIAN, KB9EKO, AND MYRON, K9JJR, SHOULD BE ON THE AIR SOON AND BE ACTIVE THROUGH DECEMBER 12. LISTEN FOR 8P9CT AND 8P9DC. STEVE, KU9C, AND RALPH, K2PF, WILL BE SIGNING 8P9GD AND 8P9GE, RESPECTIVELY, WHILE VACATIONING DECEMBER 8 THROUGH 12. THEY ALSO PLAN TO BE ACTIVE IN THE ARRL 10 METER CONTEST. QSL VIA THEIR HOME QTH.

Coming events

December 10th-11th TARA RTTY Sprint
2100z Sat.-0100z Sun.

December 18th last ANARTS cast for
1994.

: However, W1AW has set a different precedent that muddies the waters.
: They've maintained that they can come up on top of another amateur
: simply because they publish a schedule.

They have done no such thing. I'll quote the rules one more time, Gary,
and if you still don't understand, I give up.

97.101 (d) No amateur operator shall willfully or maliciously
interfere with or cause interference to any radio communication
or signal.

That's it. Nowhere does it say you have to listen before transmitting.
In order for interference to be illegal, it must be intentional.
W1AW does not have to publish a schedule to gain the right to transmit,
for the simple reason that they are not doing anything otherwise illegal.

: >
: >First, I'm not a ham operator, but I am a relatively new home owner. I'm
: >having a problem with a neighbor who is running, I surmise, an illegally
: >overpowered CB transmitter. ...

: John, the FCC is right. It *is* your fault. It's your fault as a
: consumer for not demanding that equipment that is not supposed to
: be a radio receiver *really* not be a radio receiver. Even if this
: CBer is operating illegally, and he probably is, that doesn't excuse
: telephones or stereos picking up his signals. ...

I agree with Gary except for one thing. Unlike CB operators, hams must
pass one or more examinations on radio theory, and thus are more likely
to be able to solve interference problems if they do crop up. That's why
CB sets are limited to 5 watts or so, while hams may legally run up to
1500 watts. If the CB'er were using legal power, he would be unlikely
to be causing a problem.

: Gilbert Baron Bailar es vivir W0MN
: pgp2.6 key upon request

You might care when you no longer can use your ham radio due to all the
encrypted voice and data that that would flood the bands from non-amateures.

On the other hand a PGP type signature file would be approiate to verify
the plain contents of a packet message as originating at your station.

>>how will anyone know who to call?

Regarding "load management" and cellular phones (even the analog AMPS
phones), cell phones TODAY have a memory location that determines load
priority. It's called ACCESS OVERLOAD CLASS. It is a number between 0 and
15. The average user has a number between 0 an 9. In times of overload, the
priority is MULTIPLEXED between 0 and 9, allowing everyone a chance to get in
at one time or another. Emergency services, police, fires and local government
cell phones can be programmed with numbers between 10 and 15, giving them
priority over the average consumer. If an amergceny worked fires up his cell
phone and all channels are busy with lower priority traffic, ONE of the lower
priority calls will be dumped and the priority traffic will get the channel.

Amazing how computers can deal with this without need of a net-control
operator, isn't it? The average "dumb consumer", of course, thinks that his
call was lost due to a faulty system. I will agree that a voice message
stating WHY the consumer was dumped would be nice, but in a real
emergcency, there probably is no time for such friendliness.

Gary Coffman writes...

>Where does that leave hams with our antiquated technologies? Out in

>be content to beep back and forth forever, exchanging postal cards,
>as we become more and more irrelevant to the modern world?

I agree. I wish more hams were intersted in this stuff,
or at the very least, acknowledged the need.

I am a little confused here, Alan. If W1AW transmits without listening and someone is using that frequency when W1AW transmits, it appears to me that they could legally be described as "intentionally" and "willfully" interfering with another "radio communication or signal." Although I am NOT a lawyer, my interpretation of the clause above is that if you transmit without listening, and the current user of that frequency complains, you are violating this regulation. Wouldn't we all be happier if the regulations were written in a more exacting manner? Something like, "A licensed amateur MUST listen before transmitting to avoid interfering with another transmission or signal." And perhaps like, "Anyone operating an automatic transmission must choose a frequency not already in common use by other groups."

Let's face it although the W1AW transmissions are happening on a well known schedule and frequencies, this other guy appears to have chosen frequencies and schedules that he knows will cause a great interference to some well established nets...
Bye... Ted..

4027. Re: Morse code timing needed

Newsgroup: rec.radio.amateur.misc

In article <srj.786851741@orodruin.nsd.3com.com>,
Scott Johnson <srj@ESD.3Com.COM> wrote:

>to 'time' Morse Code; what I mean is, what is the specification for length
>of a dah versus a dit, and the length of the inter-character and inter-word
>gaps?
>
>I saw here once before the entire timing specification; I could sure use it
>again!

Someone else has already forwarded the list of timing (eg: dash = 3 dots,
etc), but I wonder if this info is of use to you...

There is a principle that says:

The number of morse dots generated during an interval of 2.4 seconds is
numerically equal to code speed in words per minute. Similary, the number of
Morse dashes generated during an interval of 4.8 seconds is also equal to
wpm (see below).

This is 'below'.

Determining Morse Code Speed

The average English language word in Morse code is defined as being
50 units in length. A unit is defined as the shortest signal element,
equivalent to a "bit" in computer lingo, or a "Baud" in digi-speak. for
Morse, a dot consists of one unit key down, followed by one unit key up,
totalling two units. A morse dash consists of three units key down followed
by one unit key up, totalling four units. If 50 units are transmitted in
exactly one minute, the speed is defined as one word per minute. Linear
proportion applies, so when 2 * 50 units are transmitted in exactly one
minute, the speed is 2 wpm, etc.

If 50 units require 1 minute at 1 WPM, each unit = 6/5 seconds in
length.

At 1 wpm a Morse dot dakes 2 unit/dot * 6/5 sec./unit = 2.4
sec./dot. Since the relationship is linear, the number of Morse dots sent in
2.4 seconds will equal that numerical speed in wpm.

Similary, at 1 wpm a Morse dash takes 4 units/dash * 6/5 sec./unit =
4.8 sec./dash. So again, the number of dashes sent in 4.8 seconds is equal
to the speed in wpm.

... The above was taken from an article in "CQ - The Radio Amateur's Journal
(Nov'94) without permission.

President's Address

This is Michael Corbin, VK2PFQ.

Only 13 shopping days 'till Christmas. I do hope all hams have placed their Christmas orders with their XYL's or OM's as the case may be. If you haven't, well why not be a little devious and get a friend to suggest a nice present for you. If you need a few ideas, then consult the latest edition of AR magazine, there's lots of great ideas in there this month.

Last night was the last Council meeting for this year....it was a Christmas get together as well. The meeting was well attended and after dispatching the business, everyone stayed on for a Christmas drink and a few nibblies. Isn't it funny at parties these days, Michael VK2MJ brought along a carton of Tooheys Blue.... He was hard pressed to get rid of half a dozen. Mind you I don't encourage drinking and driving but haven't times changed....Perhaps for the better.

Amongst the normal business that was transacted, was a motion that this "Council", after careful deliberation at the last meeting, thought might be a good gesture at this time of year. Accordingly, it was decided that since there was no fault found by the "committee of inquiry" (their words not mine) set up by the previous Council to "Investigate" the membership of one David Horsfall and that since the previous Council, for reasons only known to themselves, had not elected to take any action, either way; then the present "Council" should find no fault with David Horsfall......It was moved that "the Charges" (not my words) be withdrawn... A letter will be sent to David informing him that no "Offence had been committed under Item 21 of the M&A's. Now that might not be the exact words used, but the sentiments were the same.

Oh, by the way, that cheque reached Lewarne & Goldsmith, indeed in record time. My thanks to John Robinson for promptly signing the cheque and forwarding it along to David Lewarne. The final touches can now be put to our Deposition and the whole thing can be buried in the past.

Membership Renewals are now in your letter boxes. I appreciate that some of you might be loathe to renew in view of all that has gone on in the past year. If you have doubts, then before you decide NOT to renew, heaven forbid, please consider

giving the present "Council" a go to clean things up. Isn't it the Australian tradition to give everyone...."a fair go". This "Council" has really not been able to get it's teeth into anything, as it constantly has to fight rearguar actions and put out those brush fires that our opponents keep lighting.

If there is something you didn't like in the past that has occurred, then before you judge "THIS COUNCIL", make sure it was "THIS COUNCIL" that was responsible. Make sure it was US who did whatever it was, not our predecessors.

Next week will be the last Broadcast for 1994. Christmas/New Year arrangements will be advised in next week's Broadcast.

See you then.

Federal news

Family membership

A proposal from the VK7 Division that a "family membership" grade be investigated, has been recommended to the Federal Council by Jim Forsyth VK7FJ, Federal Councillor for VK7. The proposal is to be investigated by the new Federal Secretary, with a view to reporting to Council as to costs and feasibility at the next quarterly meeting in February, next year.

The NZART has a family membership grade. Details of its operation were described to the Federal Council by NZART dlegates who attended the WIA's Federal AGM in May.

Packet Radio Users and the Law

Since a telephone computer bulletin board user in West Australia copped a $40,000 judgement in a defamation action earlier this year (see WIA News, May issue), there has been protracted debate among the radio amateur community about the liabilities of packet radio use.

Under the current radiocommunications regulations governing the amateur service, any packet radio station forwarding messages is responsible for their content. Add to this the situation under defamation law that any station operator transmitting or forwarding a message originating from another station having defamatory content is a "knowing publisher", even though their station automatically forwards messages. The originator and all forwarding stations are liable under defamation law.

The problem is, a practice has allegedly arisen in which packet operators use the callsigns of other stations to transmit messages which are possibly defamatory or otherwise in breach of the amateur regulations. Suggestions have been circulated that the "problem" could be readily circumvented by using software which provides for packet message "authentication" by users. Such authentication

software employs encrypted character strings embedded in the packet message, but there has been concern that the use of this type of software may also transgress the amateur regulations.

A spokesman for the SMA has advised, in responses to individuals, that the existing and foreshadowed amateur regulations allow the use of such encrypted strings for authenticating packet messages. The SMA spokesman has also indicated the Agency would be reluctant to legislate that authentication be mandatory, or to specify a particular system. Reduced regulation, wherever possible, is the aim.

To be on the safe side, packet BBS operators should store and view messages to confirm that the contents are not libellous or in breach of amateur regulations. Even with authentication, the SMA spokesman points out, Section 108(d) of the Radiocommunications Act 1992 places the onus on all licensees, including packet BBS operators, not to permit their stations to be used to affront, alarm or harass other people.

In the USA, the FCC places the onus on the originator and first PBBS station to keep the content of messages within the law. In Australia, it is every operator's responsibility.

World Radio Sport Championship

Just in case you were thinking of joining in the fastest growing aspect of this hobby around the world - amateur radio direction finding (ARDF) - the deadline for teams entering the 1995 World Radiosport Team Championships has been extended to 28 February, 1995. The event will be held in Washington, DC, in the United States (see October WIA News).

Broadcast roster & Christmas BBQ

The 1995 broadcast roster

The first roster for 1995 will be drawn up during the Christmas break. It will start on the 8th January and will run till the end of March. Would all broadcast team members please contact Steve VK2QZ with their unavailability dates before the end of December, so the roster can be finalised as soon as possible.

If anyone listening would like to join the broadcast team you're invited to contact the Parramatta office on 689-2417 or directly to Steve VK2QZ -- Steve's telephone number and address is known to most people, his address of course is in the call book. No special skills are required nor is an amateur licence, although we are in need of a few more full call amateurs and people with good news-reading voices.

End of year get-together

Christmas is here and once again we are holding an informal get-together for the broadcast team. It will be after the morning broadcast on December 18th, which of course is next Sunday. This get-together is mainly to say thanks to the loyal and hard-working broadcast team who bring you the news each week. However, all are invited to attend.

So -- come along, meet the people behind the voices, bring your family for a visit to Dural and inspect the broadcast station. You should bring your own food and drink but some soft drinks and nibblies will be provided. The barbeque will be lit after the morning broadcast, subject of course to any fire restrictions on the day.

May I take this opportunity to thank all those on the broadcast team for a job well done during the year, especially through some trying times, including broadcasting by candlelight.

-- submitted by Steve Pullen VK2QZ Broadcast Roster Coordinator

VK2 Division services

The N.S.W. Division of the W.I.A. runs Amateur classes and examinations, a free QSL bureau for members, slow morse practice on the 80m band, a technical library and bookshop, and Trash and Treasure sales on the last Sunday of every odd-numbered month.

You're invited to contact the Divisional Office for more details of the activities of the N.S.W. Division of the W.I.A.

WICEN news

This is a quiet time for WICEN, officially, but paradoxically it can be our busiest; it is worth reminding listeners that this month is the 20th anniversary of Cyclone Tracy, which flattened Darwin on Christmas Day 1974, and the 5th anniversary of the Newcastle Earth-quake, which did its best to level Newcastle on 28th December 1989. WICEN members were heavily involved in the aftermath of both events, and continue to be involved where normal communications break down following a disaster; those Amateurs who "just want to help" are advised that only suitable-qualified personnel are permitted to enter a disaster area, and an "Amateur ticket" is no longer sufficient -- one has to be a member of a recognised rescue squad.

The only scheduled event this month, apart from the afore-mentioned anniversaries for which there are undoubtedly other plans, is the Hunter region meeting on Monday 19th December, at the Emergency Operations Centre, corner of Elizabeth and Hannel Sts, Carrington, commencing at 7pm.

Those who are planning for next year should note the RTA Bike Ride over the 4-11th March, the Bungonia Cave Rescue Exercise on the weekend of 18-19th March, the Goulburn Training Seminar on the weekend of 13-14th May, the Hawkesbury Classic Paddle on the weekend

of 14-15th October, and JOTA on the weekend of 21st-22nd October.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest; packet radio is the preferred medium, to VK2AAB, VK2OP, or VK2GJB.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

B.O.C.P. course

The Broadcast Operator's Certificate of proficiency (B.O.C,P.) course will be run in 1995, for N.S.W., at Sydney Institute of Technology, Ultimo Campus. See 1995 Handbook.

The aim of the course is to provide the technical skills to run and maintain a broadcast radio station. This is a post-trade course.

Enrolments are on Friday 3rd February 1995 and Monday 6th February 1995. Telephone enquiries to (02) 217 3346.

From Brian Clarke VK2GCE

News briefs

News briefs

As many will be aware the bushfire season is upon us, a fact that was brought home to us at the W.I.A. last week when fire struck the Dural area of Sydney, not too far from the Divisional broadcast facility.

Thanks to the efforts of the local Bush Fire brigade, the Dural station was not damaged in the fires. A special thanks go to local Amateur and "Bushie" Mike Walton VK2MJ who was active in fighting the fires here at Dural.

As Radio Amateurs we can all be of assistance during the bushfire season. Please keep your equipment ready for use at all times, have plenty of spare batteries on hand, so you can stay active for prolonged periods. Contact your local WICEN Coordinator for deatils on how you can serve the community during the bushfire season.

*****

Telstra has extended its Radfone direct dial radio service, the demand for the service being 300 per cent higher than was originally forecast. This service allows subscribers in remote areas to dial directly into the telephone network via HF radio. Telstra has added 12 interconnects, that is HF-to-telephone interfaces, to its communications stations in Perth, Brisbane and Darwin. A new interconnect in Sydney will provide enhanced use to users in N.S.W., Victoria and Tasmania.

*****

The Australian Geological Survey Organisation (AGSO) is looking to develop a new source of clean energy, one that could supply Australia's needs some 7,000 times over. The source of this new energy lies 5 kilometres underground in the form of "hot rocks". AGSO has identified nearly a quarter of a million square kilometres of rock. It's at a temperature of 225 degrees Celsius.

By piping water into boreholes and using the resultant steam, this could provide ample energy to meet our energy needs for years to come. So AGSO proposes to build an experimental 20 megawatt power station using this technology. It will cost some 60 million dollars.

"Hot rock" electricity could have enormous benefits for Australia and if used by Amateurs would lend a new meaning to that jocular term "Steam radio".

*****

The Sydney Morning Herald's "Stay in touch" column reports that the Slinky is back in vogue this Christmas. Marketed in Australia as the Tumblebug, and later Rainbow Magic, the Slinky is a floppy metal spring which was originally developed in the 1940's to help stabilise nautical instruments used in warships. When Richard James, the marine engineer who designed it, accidently dropped it on the floor, it walked down a nearby stairway - and thus the Slinky was born.

What's all this got to do with Amateur Radio? Well, it appears that during the Vietnam war, radio operators used them as radio antennas. In recent years at least one American magazine described the use of a Slinky with a simple antenna tuner. The coil forms a simple compact helical antenna for portable use.

Now the modern Slinky tends to be made of rainbow coloured plastic, not the ideal antenna material, but metal versions are still available, so why not venture into a toyshop this Christmas ans walk out with a new antenna.

*****

News Briefs looks at communications news items that appear in the mainstream media. Thanks this week go to the Australian and the Sydney Morning Herald. If your local or regional paper runs an item of interest to Radio Amateurs, why not send a clipping to the Divisional office.

News Briefs are prepared and edited by Richard Murnane VK2SKY

Cook Is. Licences

Going to the Cook Islands?

With the approach of the Christmas holidays some lucky amateurs may be doing just that. If this description fits you, why don't you get your own "ZK" callsign?

How? Write to:
Cook Island Amateur Radio Club ZK1CI
P.O. Box 663
Raratonga
Cook Island
South Pacific

Club meetings are held at Tangaroa Liqueur Bar Ara Metua (Inland Road) Tutakimoa (next to "The Perfume Factory") Raratonga, Cook Island.

When: Meetings held first Thursday of every month at 8.30pm.

General information: The club is a great place for visitors to meet LOCAL AMATEURS and RADIO ENTHUSIASTS. A warm welcome is guaranteed. No joining fee. Enjoy a swim amongst lush tropical garden setting in full size pool. Club can arrange meetings and skeds with Outer Island Amateurs and discounted travel to the outer islands. Full Amateur Shack at Club House with excellent Antennas available. Club can organize local ZK RADIO LICENCE whilst visiting.

ORIGINAL: (SMA) AMATEUR OPERATOR'S CERTIFICATE of PROFICIENCY must be produced - A copy not acceptable, to obtain your ZK LICENCE to operate in the Cook Islands.

Further information from John Abbott ZK1AX (Club Secretary)
Telephone 0011-682-21190
Fax 0015-682-20964

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news - Chifley

From the Chifley Amateur Radio Club

A reminder for all members of the Chifley Amateur Radio Club that the date for this year's Annual General Meeting is Saturday 17th December 1994. It will be held at the clubrooms and the meeting will start at 1.30pm.

--Brett Hazell Publicity Officer Chifley Amateur Radio Club

Club News - A.A.T.C.

Stop press - Attention all AATC mwembers - changes to the next meeting location - it will be on December 11th at Dave Pack's home 10 Manus Place 1.00 pm Glenfield owing to an overbooking at WIA - Parramatta.

Main lecture: (a) oscilloscopes - the use and abuse. A demonstration of an 8 channel relay controlled output from your IBM computer so you can operate external devices via the keyboard, backup lecture (b) will be on charging lead acid batteries.
The meetings are open to any amateur with an inclination to construct.

Calling all AATC members - start thinking about what input you can do for the Wyong field day next year - remember Feb 26 is only 11 weeks away. Sort out what equipment you wish to have displayed. Also the timings you will be present to man or woman the site etc.

For more information about the A.A.T.C. listen to the net on Tuesday nights from the Liverpool area on 146.625 MHz - approx 19.30 hrs - or watch us on 1250 MHz from our Oaldale repeater any-time. Also you can ring for more info to Sydney 02 587-3491 any time !!!

Note the next AATC meeting at 1pm - 10 Manus Place Glenfield Dec. 11th and note this is the last meeting of the AATC this year - be there !!!

AATC Inc. Publicity Officer Bob Barnes

Club News - Waverley Amateur Radio Society

The Society's next meeting will commence at 7:30 p.m. on Wednesday 21st December at the Rose Bay Scout Hall in Vickery Avenue, Rose Bay, located next door to the Rose Bay R.S.L. Club. Doors open at 7:00 p.m.

The main topic for the evening will be a presentation by Dave Pack on Amateur Television. Visitors are most welcome.

Simon Buxton - VK2EII - Publicity Officer

Club News - Gladesville

FROM THE GLADESVILLE AMATEUR RADIO CLUB INC.

THE GLADESVILLE CLUB THANKS ALL OUR VIEWERS AND FRIENDS FOR THEIR SUPPORT OVER THE PAST YEAR AND WE LOOK FORWARD TO DOING BETTER THINGS FOR YOU IN THE COMING YEAR.

THE LAST LIVE ATV TEST TRANSMISSION ON CHANNEL 35 FROM VK2TVG FOR 1994 WILL BE ON WEDNESDAY 14TH DECEMBER, WITH LIVE TEST TRANSMISSIONS RESUMING NEXT YEAR FROM 18TH JANUARY.

DURING THE HOLIDAY SEASON, GLADESVILLE TELEVISION WILL BE WILL BE TELEVISING TAPED MATERIAL ON THE USUAL TEST TRANSMISSION DAYS -- WEDNESDAY, FRIDAY AND SUNDAY EVENINGS -- EVEN ON CHRISTMAS DAY!

AS USUAL THE TEST TRANSMISSION TIMES ON UHF CHANNEL 35 WILL BE:

7.30 PM ON WEDNESDAYS
7.00 PM FRIDAYS AND SUNDAYS

KEEP WATCHING THROUGHOUT THE HOLIDAY SEASON FOR INTERESTING TECHNICAL AND EDUCATIONAL MATERIAL!

WE HOPE YOU HAVE A VERY MERRY CHRISTMAS AND A HAPPY NEW YEAR.

-- PAT LEEPER VK2JPA, SECRETARY

Club News - ANARTS

HOLIDAY DATES FOR ANARTS BROADCASTS

THE ANARTS RTTY BROADCAST WILL GO INTO RECESS AFTER 18TH DECEMBER AND RESUME ON 15TH JANUARY 1995.

THANKS TO ALL OUR LISTENERS OVER THE PAST YEAR AND WE WISH YOU ALL THE COMPLIMENTS OF THE SEASON, AND MAY THE CHRISTMAS GIFTS BE JUST WHAT YOU DESIRE.

MERRY CHRISTMAS, FROM PAT VK2JPA ANARTS BROADCAST OFFICER

Coming events

Now, a summary of upcoming events of interest to members and other Radio Amateurs ...

NSW Water Ski Ass'n Lion island Classic (VK2KLX) . . . . . Today
Divisional exams at Parramatta . . . . . Today
Summerland ARC exams . . . . . Today

Hi, David--

Our local post office told me this last week that the revised international rates had not been determined yet [only the domestic rates are known at this time].

Great! Chances are they'll go up 10% [just like the domestic rates] but we'll have to wait and see to be sure. 73,

4031. Re: The end of ham radio

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-12 12:55:20 UTC
From: papo@briscas.gamekeeper.bellcore.com
Message-ID: <3chh7o$bdi@athos.cc.bellcore.com>
Source record: 255174

I'll share my 2/100 bucks. I do not think that HAM radio will die
with the advent of Cell Phones or Personal Communications Services (PCS).
However the FCC might take the "Use it or Lose it" policy more seriously.
I still believe that HAM radios and portable radios very useful when disaster
coordination is needed. First it is cheaper to use and maintain than
cell phones. You do not have to pay other than electricity and the phone
companies are not usually trilled to have people talking for free over the
phone. Second, cell towers need electricity and a working phone
connection to operate. If neither of them are available, the system
is plain dead. Third, those coming to be PCS's are very short range
with limited capability. With some of them you can only transmit, with
other's, like beepers, you can only receive. When disaster strikes neither
of them might be available. I lived it when Hugo struck Puerto Rico.
Puerto Rico has two small islands that are part of the main one.
Hugo wacked them good, about 85% of all constructions in those two islands
were wrecked. All communications (cell and land phone) from those islands
were dead and no electricity was available. The only way the problem was
ever reported to the "big island" (i. e. Puerto Rico) was by HAM radio.

That's why I think that HAM is still a very important asset for emergency
disaster communications.

Regards,

Don`t sweat it Bill, I did the same damn thing a while back...you need
to specify port 2000, like this:
TELNET callsign.cs.buffalo.edu 2000

That should do it.....

I've got enough postings in reply to mine that say morse code is archaic,
not needed in real life etc. Yes - I fully agree with that. I DO NOT LIKE
code at all. But as a measure to prevent congestion of the HF bands - it's
good. And can you offer something better then code for that? The only trully
resonable option would be to charge X amount per year for a priviledge to
use HF. I think I like that less then code really. Imagine - if roads were
very narrow - and thus amount of cars that can operate would be limited - it
would be resonable to limit drivers to those that can install horesshoes. Though
in fact it would be better to show skills in rebuilding the engine. But can you
come up with the example of a HAM related skill as difficult as rebuilding
the engine (morse code IS comparable ummm... pain)?

No. In fact the FCC *requires* knowledge of at least one code for certain license classes. Since they require the knowledge, it seems reasonable to assume they want the code to be used. The FCC also specifically allows codes or ciphers whose purpose *is* to obscure meaning for telecommand purposes (97.211(b)).

>> If your data stream is easily identifiable as
>> legitimate traffic, i.e. easily decoded and checked, there is no problem.
>
>This would only occur if you use "standard" codes; the "Q" signals come
>to mind. Privately agreed-upon codes by individuals would not be legal.
>I'm not sure if compression techniques couldn't be ruled illegal.

Read 97.309(b). A station may use *unspecified* digital codes subject to certain frequency limits, and subject to domestic use only, no foreign communications in an unspecified code or cipher, as long as the *intent* of such codes or ciphers is to facilitate communications and not primarily to deliberately obscure the meaning of the messages. Compression techniques would certainly qualify, and so should PGP signatures for authentication or verification. In fact, the FCC has recently *encouraged* amateur messaging system operators to use some authentication technique to assure that the messages they

forward are not forgeries. The district EIC *may* require a station
to keep a record of the transmissions, including any key or algorithm
needed to recover the plain text of messages sent using an unspecified
code. But an amateur doesn't have to keep such records unless requested
specifically to do so by the EIC of his district.

And I'll repeat this one more time. 97.101(a) requires amateurs to
follow good amateur practice, and 97.101(b) requires amateurs to
cooperate in selecting transmitting channels. As I said in the original
note, good amateur practice, as listed in the ARRL Operating Guide,
requires listening before transmitting, and cooperating with any other
station using the frequencies so as to minimize mutual interference.
If you still don't understand that, I'll try again using smaller words.

Gary

: but will all these services forgo their usual fees to permit emergency traffic
: to flow?

: how about after a big hurricane wipes out a city?

: will these services be able to handle a couple of hundred of percent over
: load?

These systems are being designed to handle global communications,
and will have capacity of thougsands of calls a minute.

: how will anyone know who to call?

If you are on the emergency team you will have a phone and a
phone number - just as with terrestrial wired phones. Emerg dispatches
would have communications with everyone they would need to with
such a system. They would probably just need some extra people
to handle the calls.

It's the neighbourhood communications where things would start
to fall apart ... but if a few homes in each neighborhood
had such phones (satellite type) and had a sign on the front
window to let neighbors know (same as block parent idea) ...
you wouldn't need hams at all ...

Mind you after hearing all the problems with 911 operators
lately ... I would suggest that what is needed is for
everyone with a phone to take a course in emergency
communications!

: will any of these services provide for a "radio mode" of operation?

Not sure of the use of this ... why would you need it if you could
phone the person you need to talk to? (speaking for the emergency
workers point of view)

: there's probably more..but however useful it will be to have this stuff also,
: there's still a need for "amateur" style operations.

: Just barely to a low orbit satellite if you have a line of sight path.
: The free space loss at 2 GHz to 200 km is 144 dB and with +27 dBm
: transmitting power, the received power is -117 dBm. The receiver sensivity
: might be around -120 dBm, which is really marginal if a simple dipole
: is used at the satellite. For reliable communication with more or less
: obstructed paths, the antenna at the satellite must have a gain of 20-30 dB.

Most of these LEO satellite (commercial ones) systems use gain antennas
that either track the ground (Teledesic) or have multiple beams on
the ground. The system designs are for small handheld terminals for
some or for small fixed high speed terminals (155 Mbps type rates
for high speed, 9600 bps to 64 kbps for the portable/mobile systems).

: > your provider will have to have a
: > tower every 2 miles or less...

: > This may be ok in Chicago or NY City... but it will be a long
: > time before you will see it in other the big markets...

: The reason that even smaller cell sizes than 2 miles are used in such
: cities, is not that the signal couldn't travel longer than that.
: The real reason is to reuse the same frequencies and thus be able to
: support a much larger number of users with a limited number of channels.
: The propagation on 2 GHz shouldn't be too much different from the
: propagation on 1.3 GHz, so take a look at the service area for any 23 cm
: repeater. We are talking about distances more than ten times as large.

: The problem with satellite based cellular system is that you can not
: make the cell size small enough for densely populated areas. The beam
: from a 30 dB antenna might be 6 x 6 degrees, which is too much and IMHO
: ground based networks must still be used for densely populated areas.

Most aren't being designed to compete with cellular ... but are
still capable of providing thousands of calls a minute type
systems (small CO sort). There are still large tracks of area
between cell systems in the US, and large areas of the globe
with no phone systems at all - that's what these system are going
after.

I wish I had thought of doing that. I could make a killing.
I looked at the 610 and was surpised to see no address where to
send it (I guess they are preparing for the day when they turn the
licensing over to private companies). For a lot of people getting
a 610 form sent directly to them may be worth the fee. I myself
recommend that one sends the renewal a year in advance just to make
sure nothing goes wrong. You do have a two year grace period.

4042. Is VOX a function of the mic or the transceiver?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-12 16:38:08 UTC
From: djenkins@jetson.uh.edu
Message-ID: <3chu9g$nmt@masala.cc.uh.edu>
Source record: 255237

Am considering phone operation, but have to invest in a mic. Is VOX a function of the mic or is the circuitry in the transceiver?

The TecTec Argonaut that I use has a 1/4" phone plug for the mic, and I notice that pictures in the most of ads I see show multi-pin mic connectors on rigs. I infer from this that these new rigs support mics that sport features that perhaps the Argonaut won't/can't utilize. Is that correct?

Would it be possible for me to buy a mic that will work with the Argonaut but will be usable on a newer rig if I ever do purchase one? Are there adapters that will take a 4-wire (I guess) connectiog cable to 2, and vice versa?

Finally, I need some recommendations for a mic - under $100 or so. Would also appreciate hearing pros and cons of desk versus hand-held mikes.

TIA and 73...

I would first contact the FCC. Back in about 1970 when a novice friend
of mine upgraded to general he was issued a WC6 call which we knew
to be a Caroline Islands novice call but figured the WB6 sequence had
run out and it was the new series. After several nasty letters, including
one from an ARRL VP accusing him of illegal operations, (he was 15 years old
BTW) he wrote the FCC to straighten it out. Turns out they did in fact make
a mistake and then issued an unused WA6 call. This was much better until
we QSO's the other ham with the same (reissued) call. Another letter to
the FCC and finally a correct callsign. Then he moved to New York.......

Never ascribe to malice that which can be explained by stupidity.

4044. Super Keyer II Current Drain fix

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-12 17:24:34 UTC
From: Wayne_Estes@csg.mot.com
Message-ID: <9412121121.ZM16988@SALCIUS2>
Source record: 255238

To Tom, VE7TMA and anyone else who may be interested:

I also had a problem with the Super Keyer II batteries going dead in only a couple months. I solved the problem by putting a diode in series with the key line. Cathode towards the keyer, anode towards the transmitter. I used a low-voltage-drop Schottky diode, but a regular diode might work okay.

The key line on my Icom 751 was drawing current from the keyer when the radio was turned off. The diode prevents the radio from drawing any current on the key line. Now the keyer can only sink current, which is what you need to key the radio.

I have two transceivers connected to my CMOS Super Keyer II, each connected to the keyer through a diode. Whichever transceiver is on in CW mode gets keyed, without switching cables, etc. The key line of one transceiver has a low impedance to ground when turned off. This condition would continously key the other transceiver without the diode on the key line.

: --------- David Keith -- dkeith@darkwing.uoregon.edu ---------

You should be able to find evaluation PSPICE at

oak.oakland.edu

in the directory

/pub/msdos/electric

(although I also have a listing for, and have used the path)

/SimTel/msdos/electric

and at

ftp.wust1.edu

in the directory

/systems/ibmpc/msdos/electric

Haven't checked the ftp.wust1.edu site, but several weeks back, the Windows PSPice eval version at oak.oakland.edu was 5.4, as opposed to the latest, which is 6.1. This isn't necessarily a bad thing; 5.4 is fine, and has (for some) the added advantage over the Windows version of 6.1 in that it doesn't require Win32s (which, depending on the version you run and a few other factors, can provide "local color" in the form of seemingly benign "GROWSTUB caused a General Protection Fault in module POINTER.DLL" messages).

The ARRL did NOT make up the principles of amateur radio. The government did.

When Congress recently enacted legislation supporting Amateur Radio, much of
the reason our legislators voted for this was because they believed in the
good of amateur radio based in large part to the principles listed above.

If you want to change these principles, particularly to remove the mention of
emergency handling, do you think that Congress would still vote to protect us?

Why should they when they have a budget to balance and commercial interests
are chomping at the bit to buy the rights to the frequency spectrum that we
use for free?

4050. Re: Is VOX a function of the mic or the transceiver?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-12 17:58:52 UTC
From: phb@syseng1.melpar.esys.com
Message-ID: <phb.787255132@melpar>
Source record: 255239

djenkins@jetson.uh.edu (David Jenkins) writes:

>Am considering phone operation, but have to invest in a mic. Is VOX a
>function of the mic or is the circuitry in the transceiver?

VOX is built into the transceiver, and is activated by audio from the
mike.

>The TecTec Argonaut that I use has a 1/4" phone plug for the mic, and I
>notice that pictures in the most of ads I see show multi-pin mic
>connectors on rigs. I infer from this that these new rigs support mics that
>sport features that perhaps the Argonaut won't/can't utilize. Is
>that correct?

It's been a long time since I used the Argonaut, but I am prettty sure
that the 1/4" mike input on the Argonaut is a two-circuit jack, i.e.,
one line and ground is the mike (audio) circuit, and the other line and
ground is the PTT. I used an old Astatic D-104 mike with my Argonaut,
and I don't recall rewiring the mike in order to use it. The 1/4" plug
on the mike had audio on the tip, PTT on the insulated sleeve, and the
barrel was the common ground for both.

My Icom IC-735 mike has wiring for the PTT switch, mike audio,
UP/DOWN buttons (for tuning the transceiver up or down in frequency from
the mike), ground return, etc.

>Would it be possible for me to buy a mic that will work with the Argonaut
>but will be usable on a newer rig if I ever do purchase one? Are there
>adapters that will take a 4-wire (I guess) connectiog cable to 2, and vice
>versa?

You can certainly use a modern mike, but my guess is that you might
have to make your own adapter cable, wiring a mike jack to a two-circuit
1/4" plug for the Argonaut with only the mike audio and PTT fed to the
transceiver.

Your Argonaut manual probably mentions what it will accept in terms
of a mike impedance, so that's something to check before you buy a mike.

>Finally, I need some recommendations for a mic - under $100 or so. Would
>also appreciate hearing pros and cons of desk versus hand-held mikes.

Although I'm currently using a hand mike for both my HF and 2-meter
multimode rigs, it's only because that's what came with them.....I haven't
changed since my HF operation is 99% CW, and on 2 meters I tend to have
short QSOs.

However, if you're going to ragchew, holding that button down on the hand mike can get tiring pretty quickly. A desk mike with a locking PTT switch is much better. Of course, if you use VOX this isn't a problem, but I've never cared for it and hence don't use the feature; I much prefer PTT.

Don't know if it's still made, but for use with older rigs it's hard to beat the D-104 with the UG-8 PTT stand. Sometimes I wish I'd never sold mine.....it's a good mike, large and kinda klunky-looking by today's standards but excellent, crisp audio. But that's just my opinion..... :-)

Two things to try. The userid "postmaster" is supposed to be defined at
any site that can get email. Try that and ask for it to be forwarded to
Steve.

The other is to do the command: whois arrl.org
which looks up the site in the database, and normally contains a
contact name & email address. Here is the output. It would appear that
arrl doesn't have on site contacts, as the listing shows a contact at
psi.com, who is (apparently) thier internet provider. Hope this helps.

According to the Industry Canada office in Edmonton, Alberta:
Under normal circumstances, only Canadian citizens or landed immigrants
are allowed to hold Canadian callsigns. Citizens of countries with
reciprocal licensing agreements are allowed to use their existing calls
with a /VE_ suffix.

I don't know of any local exceptions to this rule right now. There may
be some discretion at the local level
on the matter of citizenship, but I imagine this would have to be
persued at a local level.

I had the same experience with my TM-241A. Removing the mike from the rig
was the only way to stop the problem. I concluded the mike was defective,
sent the mike back the Kenwood (under warranty), and they sent a replacement.
No problems with the new mike, after 4 months of use.

>saying so) that renewals can only be done thru them.
>
>Is there truly any need for this? Can't I just mail it directly to the
>FCC at the Gettysburg PO Box?
>snip<
>--
>Rich Greenberg

To answer your question:

NO you do not have to send to W5YI and since I haven't seen the letter
I will reserve judgement on them. BUT if they are implying you need to
pay THEM $5 to renew, shame on them. I hope you merely read between the
lines.

FCC address has not changed. BTW there is an ARRL file on the info server
called 610instr.txt (10k worth of info.) You can get it from:

info@arrl.org
send 610instr.txt
quit

or you can FTP it.

**********************************************************************
* University and School Amateur Radio Club List Version .04b *
**********************************************************************

April 3,1994

Welcome to the University and School Amateur Radio Club list. The
purpose of this list is to provide information about amateur radio
clubs at schools and universities. The current editor of this list
is...
Jeffrey Luszcz N2TIQ
President Cornell Amateur Radio Club W2CXM
jrl2@cornell.edu

This is the Beta version of this list so give me some feedback
on what you like and dislike about the data format and general
presentation.

This list will be availible for ftp from the following servers:
oak.oakland.edu
/pub/hamradio/docs/misc/ham.faq.univ_Version_.04b.txt

Also I will be posting this list once every two months onto the
following newsgroups:

rec.radio.amateur.misc
rec.radio.amateur.info

!!!IMPORTANT!!!
If you do NOT want your club's information presented here
then please inform me of this wish through email.
!!!IMPORTANT!!!

The current data format for submitting club information is....
--------
SCHOOL:
NAME:
ADDRESS:
CLUB OFFICERS
REPEATERS:
CLUB STATION:
STATION TELE#:
ORGANIZATIONS:
YEAR STARTED:
NUMBER OF MEMBERS:
BANDS ACTIVE:
E-MAIL ADDRESSES:
```

HISTORY

If everyone follows this form it makes it easier to edit and
maintain the list. I see this format changing as the list grows
and new concerns become raised. Please address your email to me
as follows FAQ -(name of school). For example...

Subject: FAQ - Cornell University

This makes it easy for me to move the mail around and put it in
the right folders. I am working on getting this information into
a datbase which will let me change the FAQ around easier and put
it in alphabetical order. Watch this space.

DISCLAIMER:
Feel free to copy and disperse this list freely as long as it
remains in its original format. If you do not want your clubs
information in this list then email the list owner and tell him so.

Also...
I am unable to provide any other information regarding college clubs
other than what appears on the list. Either the organization has
requested that it be kept confidential, or I just don't know. If
you do find out, please direct such information to my submission
address above so that others may benefit from it.

****
* Here is the list *

BANDS ACTIVE:
HF bands, 2 meter and 440 (some sat work)
E-MAIL ADDRESSES:
general membership: W6BB@violet.berkeley.edu
officers/board: hams@violet.berkeley.edu

HISTORY
I worked on this last year. Essentially, we were formed
in 1914 as one of the first stations on the west coast.
We started DX receiving experiments at this time, and
soon established skeds with the University of Washington
and a few other schools. Our first call was 6BB and dates
back to at least 1920. I think oneof our members was the
first woman to get a commercial radiotelephone operators
license in 1924. Early on we were also connected withthe
commercial station here at Cal, and did early broadcasts
from football games, alumni dinners, etc. Club fell into
decline in the1930's, but was revived after the war,
and has followed typical boomand bust cycles since.

nuars-request@w9bgx.nuars.nwu.edu (LISTSERVER)

HISTORY
The Northwestern Amateur Radio Society dates back until late
40s or early 50s. It has been affiliated with the McCormick
school of Technology and the department of Electrical
Engineering since its inception. The club has achieved many
awards over the years, including one of the very early 5-band
DXCC's.

In 1991 a storm took down our main tower and antenna, and the
shack had fallen into disrepair. However, in 1992 Drs. Allen
Taflove and Alan Sahakian took over the faculty advisor

position, and launched an effort to bring the station back on
the air. In the summer of 1992 a new tower was erected at a
better rooftop spot than before at a cost of over $10,000, and
faculty and student members together cleaned and renovated the
shack, and the old transceiver equipment was replaced. We
also pulled in Ethernet cabling for Internet, and got a
computer (w9bgx.nuars.nwu.edu).

We are currently looking into holding a course in the
Department of Electrical Engineering which will use the
resources of the Amateur Radio club, and hope it will increase
student participation.

==========

SCHOOL:
University of Pennsylvania
NAME:
University of Pennsylvania ARC N3KZ
ADDRESS:

CLUB OFFICERS
President: Matt Gomez, AA3FQ mgomez@mail.sas.upenn.edu
Vice President: Eric Reiter, WI2N ericj@eniac.seas.upenn.edu
Technical Director: Jeff DePolo, WN3A depolo@eniac.seas.upenn.edu

REPEATERS:
see below
CLUB STATION:
Station 1 - Philadelphia (main campus)

Kenwood TS-940S, Alpha 76A, Icom 275H, Icom 375A, Icom 471A, PK-232,
80286,Azden PCS4000, power supplies, headsets, mics, Vibroplex
iambic, keyer,KLM KT-34A @100', Cushcraft R5 @ 60', 40m dipole @ 60',
KLM 2m/440 OSCAR,yagis, Diamond X200 @ 100', various other VHF and
UHF antennas, one tower on roof - top of tower is at 100', and all
of the usual accessories.

Station is in the engineering building on the 2nd floor. It's been
in the same room since 1924.

Station 2 - Valley Forge

Kenwood TS-530SP (soon to upgrade to TS-850), Dentron Clipperton-L
linear,Kenwood TM-742A 2/440/6m, Icom 271H, 80286, Telrex 5-el
tribander @ 40',3-element 40m monobander @ 70', Mosley TS-33 @ 40',
40m dipole @ 40',75m dipole @ 45', Diamond U2000, long-boom VHF/UHF
yagis, Hustler 2m G6,other VHF and UHF antennas, 5 towers total.

This station is on top of Mt. Misery at the U of P Microwave
Research Center. We go out to this station on weekends, for
field day, etc. It used to be a Nike Missle tracking station
back in the cold war days and now Penn uses it as a research

center. Great location - the highest point in the Philadelphia area.

Linked UHF Repeater System

Main site: Mt. Misery, Valley Forge, PA. 443.8+, 750'ASL, 2.6kW ERP
Phil site: Penncampus on top of high rise, 440' ASL, receive-only
Eagles Peak: Lebanon county, PA 442.400+, 1420' ASL, 800 watts ERP
6m remote: Mt. Misery, Valley Forge, PA 52.525 700' ASL, 200 W ERP
Addtional sites will be going up this spring/summer.

Co-sponsored repeaters

These two repeaters are on Penn's campus on High Rise North. We co-sponsor the repeaters with the clubs listed:

146.685- Holmesburg ARC 440' ASL, 800 watts ERP, two remote receivers
442.700+ NEAR-FAR ARC 440' ASL, 700 watts ERP

HISTORY
The MTSU club has been around since at least the 1960s, first as a trusteeship of the Dept. of Industrial Studies, and now under the Dept. of Computer Science. Membership has been small because the historic mission of the University was that of a teacher's college (thankfully that's changing). The Raider Amateur Radio Club is a key player in the packet radio field, and its members provide part of the core support in a project to bring high-speed (56k bps and up) packet connectivity to the entire state of Tennessee, from Mountain City to Memphis.

HISTORY
The club has been around for many years. The original
club was W0YI. It was founded over 75 years ago. The
W0YI club call is still maintained here at ISU by one
of our faculty members.

Our club has approximately 20 members who are somewhat
active. There are many more hams here at ISU, but many
of them are too busy with their studies and other clubs
to become involved with the CARC. We are always in
search of new membership.

Our members can usually be found on 2meters or 70cm.
At this point in time, there is very little HF activity
in the club.

Our club has been involved at ISU for many years. We have
meetings several times per month. Every spring, we set up
an open house display and help with communications for the
annual VEISHEA celebration, which is the largest student-run
event of its kind in the United States. We provide
communications for the VEISHEA parade, calling tow trucks,
ambulances, and the police if the need arises.
It is best for new prospective members or people
interested in the club to call me or Clyde Walter at
the numbers above. I am only at ISU during the Fall and
Spring semesters, while Clyde is a professor who is here
year around if the need arises to contact the club in the
summer months.

HISTORY

We have a club call W0QEV that has been ours at least since 1947 which is the oldest log that we can find. The league claims that we have been affiliated with them since 1949 which makes us one of the older if not oldest club station in the zero call region. This far back though and nobody really knows. Someday we will have to search though old call books from just after the war to see just when that call appears.

The club started as part of the department of electrical engineering here. It became a student union organization around a decade ago and as a result has a steady source of funds. As far as membership, if only that was as steady as funding. The club has students, graduate students, professors, university staff and even alumni. Probably around 20 members but only half that many are easy to get a hold of. There are always to few undergrads!

An addendum to the above. After the war st. louis became part of the zero district as opposed to the old nine district. We have reason to believe that the club was around even before the war, but don't know under which call or how we can research this. The ARRL doesn't know and the fcc doesn't even bother with this type of stuff.

W2SZ sports its own Usenet Newsgroup. It's rpi.union.ham-radio.
Some off campus systems may not be able get it.
HISTORY

W2SZ was originally created as 2SZ by the Troy YMCA around 1910. It was turned over to Rensselaer Polytechnic Institute in 1917 where it has been providing services to its members and the community ever since.

The station provides Amateurs with an opportunity to keep in contact with friends at home as well as providing for the learning of radio and basic electronics. The station also provides a friendly and relaxed atmosphere where members can come to get away from the stress of classes and work.

W2SZ, known to members are Zed, is a friendly group of people that are willing to share their knowledge and help those who have an interest in ham radio to get, or advance, their license. In addition they are willing to share their knowledge in the proper maintenance and operation of both club and personal equipment.

The club currently consists of about 30 members and is located at Six Sunset Terrace, Troy, NY. It also has contact with many of the past members who have long since graduated from RPI, or community members who live in the Troy area. It provides the members with many contacts, and also provides the community with a viable method of communication through the repeaters that the club has. In addition to day to day communications, W2SZ also offers lines of communication during periods of crisis. Examples of the Club's community involvement were during the San Francisco earthquake, and during Operation Desert Storm.

HISTORY
Oldest license found - 5YM - dated 6/4/20, but there is anecdotal
evidence that we may have been licensed in 1914. The station was
active in the early '20s prior to the opening of KFMQ, the U of A's
first broadcast station. Logs have been found for the '32-'34 period
when the station (*W*5YM) was active on 'phone using a Class B
modulation amplifier built as a class project. Loy Barton, inventor
of Class B, was a graduate and faculty member of the U of A.
Haven't found any relics from '34 - '49. 1949 we were granted
W5JNI and our station was in the then-Business Admin building.
We suspect the trustee knew nothing of the previous station as
he was not in engineering. We returned to W5YM in 1952 and the
club has been going strong pretty much ever since.

4058. License Renewal Question

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-12 18:58:59 UTC
From: ys@isr.harvard.edu
Message-ID: <3ci6hj$lhk@decaxp.harvard.edu>
Source record: 255252

There has been some confusion about where to send the Form 610
for renewing our amateur licenses. I am a VE affiliated with
both the ARRL and W5YI. I just called the ARRL VEC Department
for clarification, and obtained the following information:

(1) For renewal of your license:

Send the form 610 and a photocopy of your current license to
the following address. There are NO fees involved.

Federal Communications Commission
1270 Fairfield Road, Gettysburg, PA 17325-7245

(2) Make sure that:

* You keep a photocopy of the form 610 for your record.
This photocopy will allow you to operate even if a new
license does not arrive when your current license expires.

* You use the FCC's current Form 610 version which is
dated November 1993 (showing an 8/31/96 expiration date).

I hope that the above information will clarify some confusion.

73, Yuzuru Suzuki, AA1JA (e-mail address: ys@isr.harvard.edu)

4059. QSL Information on WWW Pages

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-12 19:11:10 UTC
From: ys@isr.harvard.edu
Message-ID: <3ci78e$llg@decaxp.harvard.edu>
Source record: 255247

I have two questions about QSL information on WWW pages. If anyone
can help me out, I will really appreciate it.

(1) Where can I find QSL information for countries other than
the U.S., Canada, and U.K.?

I tried the following, but could not find information for
other countries:

* http//www.acs.oakland.edu/barc.html
* http//www.systemtechnik.tu-ilmenau.de/hamqsl.html
* http//www.mcc.ac.uk/OtherPages/TraffordARC/Trafford.html

(2) How can I set my own home page in WWW?

The book I am reading ("The Whole Internet" by Ed Krol, 1992)
says that I can set my own home page by "% setenv WWW_HOME \ ...."
I tried this command on different pages, but every time I got
"Bad command" response.

Thank you very much!

In article <D0pEEB.IrF@cunews.carleton.ca>, im@hydra.carleton.ca (Ian McEachern VE3PFH) writes:
|> If you are on the emergency team you will have a phone and a
|> phone number - just as with terrestrial wired phones. Emerg dispatches
|> would have communications with everyone they would need to with
|> such a system. They would probably just need some extra people
|> to handle the calls.

Okay. Let's assume that Iridium is up and orbiting. Iridium is a low earth cell phone system from my understanding of it. (anyone care to correct me on this?)

Better yet, let's assume that just like with today's systems, you can reserve a percentage, say 10% for emegency dial tone, as oppossed to the john q public access path. This means that if a phone is designated as an emergency responder, then he get priority handling over everyone else upto a certain number of channels. So, all the fire trucks have one, as well as every 10th citizen in an area.(a real successful product ain't it!)

Now, the world falls apart. An 9.0 earth quake just hit LA. We have devistation approaching hurricane Andrew's situation in one of the largest metro areas in the country. Let's say that 1 million people are affected.(Not that bad a guess probably) So with 10% of the folks having these sat phones, that is 100,000 users going off hook at the same time to call Aunt Maude!

This really the same thing that happened during the Northridge quake of a few months ago, except as applied to a satellite system as oppossed the land-line system that has a MUCH larger thruput capability, but was just as overloaded.

|> It's the neighbourhood communications where things would start
|> to fall apart ... but if a few homes in each neighborhood
|> had such phones (satellite type) and had a sign on the front
|> window to let neighbors know (same as block parent idea) ...
|> you wouldn't need hams at all ...

At least from the scenario I'm talking about in the above, I'd say that these extra satellite phones wouldn't have that much of an impact in the first 24 hours cuz they are going to be just as overloaded proportionally as the land line system if it survives. If the land line system is gone, then it's all the worse.

The reality of any such major event is that all of the available circuits become overloaded. The path these circuits use is almost irrelevant to

the discussion.

Granted, we're talking about the "worst-case" scenario here, but we seem
to be getting pretty close to that pretty often lately!

|> Mind you after hearing all the problems with 911 operators
|> lately ... I would suggest that what is needed is for
|> everyone with a phone to take a course in emergency
|> communications!
|>
|> Not sure of the use of this ... why would you need it if you could
|> phone the person you need to talk to? (speaking for the emergency
|> workers point of view)

Actually, the "broadcast" mode is one of the most distinguishing features
of radio vs telephones. And at the same time the most useful mode during
emegencies.

Perhaps an example from the Loma Preitta quake will help.

Right after the quake, all of the hospitals were trying to find out what
the status of their counterparts was. Was so-in-so's MRI facility still
operational? Who had an operational MRI facility? Who was experiencing
a patient overload situation, and where should the excess be re-routed?

Right after the quake the hospitals started trying to call each other, and
weren't having much luck because of the phone system overload and the
fact that they had to make so many calls to poll all of the nieghboring
facilities.

Amateurs were on the scene in about 15-20 minutes after the quake at most
of the major hospitals, and a party line allowed everyone to know everyone's
status almost immediately.

This type of thing is why broadcast mode is so important during emergencies.
It allows everyone to know all everyone's status, and here all relevant
traffic.

|> Ian, ve3pf

|>

I suspect that the satellite services that will be most important in the
future will be the capabilities provided at higher data rates, and the
ability to install "phones" in remote locations after the first initial
24-48 hours of a situation.

: > or signal.
: >
: >That's it. Nowhere does it say you have to listen before transmitting.
: >In order for interference to be illegal, it must be intentional.
: >W1AW does not have to publish a schedule to gain the right to transmit,
: >for the simple reason that they are not doing anything otherwise
: >illegal.

: I am a little confused here, Alan. If W1AW transmits without listening
: and someone is using that frequency when W1AW transmits, it appears to
: me that they could legally be described as "intentionally" and
: "willfully" interfering with another "radio communication or signal."

How can it be intentional if you don't know the other station is there?

: ... Wouldn't we all
: be happier if the regulations were written in a more exacting manner?
: Something like, "A licensed amateur MUST listen before transmitting to
: avoid interfering with another transmission or signal."

That would be just as inexact. Those who have never operated anywhere
except on VHF repeaters may not understand that on HF, interference is
a fact of life. Often there are NO available frequencies that are
absolutely interference-free, so you just pick the clearest spot you
can find to call your CQ.

Even if the W1AW operator knew there was already a station on one of
the bulletin frequencies, that wouldn't constitute willful interference.
For the interference to be willful, the transmission must be made
FOR THE PURPOSE of causing interference. Obviously, in W1AW's case,
the purpose of the transmission is to disseminate code practice or
amateur radio bulletins, not to cause interference.

As a practical matter, it simply isn't possible for W1AW to listen
before transmiting. They use something like 10 different frequency
bands simultaneously. Even if they had 10 operators tuning each band
looking for a clear frequency, there is no guarantee they would find
one. And with changing propagation conditions, new interference would
likely show up before the transmission was finished. And of course
the many W1AW listeners could then never be sure where to find the
broadcasts. That would be especially troublesome on the digital modes,

where many listeners use unattended fixed-tuned receivers.

Source record: 255257

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: And I'll repeat this one more time. 97.101(a) requires amateurs to
: follow good amateur practice, and 97.101(b) requires amateurs to
: cooperate in selecting transmitting channels. As I said in the original
: note, good amateur practice, as listed in the ARRL Operating Guide,
: requires listening before transmitting, and cooperating with any other
: station using the frequencies so as to minimize mutual interference.
: If you still don't understand that, I'll try again using smaller words.

This conversation is getting annoying since we are going over exactly the same topics as in previous conversations.

Gary, your personal definition of "Good Amateur Practice" does not jibe with the way everyone else has been defining it for over 60 years. As I pointed out to you in a previous posting, W1AW and its predecessor W1MK have been using these procedures since the early 30's, as have a number of other bulletin and code practice stations over the years.

VOX may or may not pre-exist in the transceiver but it can also be
purchased included in a microphone or as an accessory that goes between
the microphone and the transceiver.

And if you're going to send a card with SASE, probably put a 32 cent
stamp on the return envelope.

The Yaesu gadget is just a high power battery charger with a built in fan
to cool the radio. You must have a battery plugged in to use it and
you must have the high voltage battery if you want to get 5 Watts out.

W & W Associates sells a battery eliminator that replaces the battery pack and
plugs into the cigarette lighter. Call them up for the details. I guess it
would allow you to run 5 W from the cig lighter, but I'm not sure.

|> is required is the US Marshalls office. The FCC is the chain of command
|> for violations of part 97. The local police have no expertise in
|> determining if a crime has been committed in this case. Police deal in
|> criminal matters and not FCC rule violations.

Well, maybe I should have made it clearer that that part was
intended to be sort of tongue-in-cheek.

But, It isn't much of a strech of the imagination to see this
as falling into the FBI's jurisdiction. After all, radio systems
are by their very nature "interstate", which is why the FCC regulates
radio, not any state organizations (as much as they would like to).

The FBI is expressely set up to investigate, and initiate prossecution
of violators of federal laws. The laws under which we operate amateur
radio (in the USA) are federal laws. The FCC is set up to administer
those laws, and in most cases to enforce them. But there is no (at least
to my knowlege) branch of the FCC equivalent to that of other federal
regulatory offices (such as DEA or BATF) which owns weapons of mass destruction,
and is suitably enthusiastic about their use in enforcement - so the logical
conclusion would be that any matter which appeared to be beyond the ability
of the FCC to enforce, would fall to the FBI.

|> If this guy is broadcasting matters pertaining to amateur radio
|> no matter how you might disagree with the content, he (K1MAN)
|> is most likely not violating any FCC rule(s). Before you go off
|> and make a fool of yourself, I'd suggest to the original writer
|> to determine if a violation has been committed. Remember, the
|> First ammendment permits freedom of speech, even if the topic
|> is related to ham radio.

The first amendment is probably the most abused part of the US constitution.

It does NOT allow any random, raving lunatic to emply whatever means
he or she chooses to disseminate his/her brand of lunacy.

As with may US laws, Part 97 is baddly written, and is not explicit
about what is, and what is not permitted. This is generally good, since
it allows that reasonable people can take a reasonable interpretation,
rather than a literal interpretation. However, its *intent* is generally
clear. General broadcasting, even if thinly disgused by calling it
bulletins is not permited - this is covered by a different sort of licence,
in different frequency bands. You *can* rant and rave on the air (as per
the first amendment), just not in amateu bands, using an amateur license.

Philip

4069. Re: Litz Wire & Powdered Iron Cores

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-12 23:39:50 UTC
From: Waltk@PICA.ARMY.MIL
Message-ID: <9412121839.aa19295@COR5.PICA.ARMY.MIL>
Source record: 255273

Rick, N6RK, writes:

:: Do yourself a favor and get some cores made with Fair-Rite #67 material.
:: This stuff is phenomenal. I've measured Q's as high as 600 at 10 MHz.
:: with it. If you want to get really low losses, talk to Ceramic Magnetics.
:: They are the acknowledged experts at this.

Zack, KH6CP/1, adds:

:I've also noticed the very high Qs.

:However, there is another advantage of iron powder material, at least
:if you can keep the stuff from heating up. Inductors on type 2 material
:vary only 95 ppm/degree Celsius. Thus, over 20 to 50 degrees Celsius,
:you get an inductance change of 0.285 percent, which is pretty
:insignificant for a tuned matching circuit with a Q of 10. On the other
:hand, type 67 material varies by 0.13 percent!/degrees Celsius. You might
:not be able to ignore a 3.9 percent variation.

I tried using a 3 core stack of both F240-67 and F240-73 material for
the 160M inductor. I found it to get so hot it set the fiberglass tape
ablaze. The ferrite definitely is not the material to use for a high
power HF amplifier. Hence, my choice of powdered iron. Zack, those
are some impressive numbers you quote. With stability like that I can
see why its a builder's in critical circuitry, albeit requiring additional
wire and, hence higher I*I*R losses.

How does one compute the maximum allowable flux density for powdered
iron. I've seen alot of talk but no cold, hard, facts. The core
material expert at Micro Metals insists its the wire. I have gotten
additional correspondence that provides a "feeling" its the core
that is the cause of the over heat. At this point I'm compelled
to side with the engineer (MM). The case is open and until I get
some Litz wire to test his theory, I'd like to get more data,
formulae, and plain ole ham wisdom before I close the book on it.

4070. Worst callsign?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-13 00:15:32 UTC
From: Wayne_Estes@csg.mot.com
Message-ID: <9412121815.ZM29522@SALCIUS2>
Source record: 255269

Maybe we should take a survey to find out who has the *worst* callsign! I think I'm a contender for the worst callsign on phone-WD5FFH. (okay on CW, though)

Some people can phonetically say their callsigns 3 times before I say mine once. When I use standard phonetics people get it right the first time about 10% of the time. They usually miss a "foxtrot", or hear "alpha" instead of "hotel". I find that "florida florida honolulu" has a much higher recognition factor, and it's less of a tongue-twister than "foxtrot foxtrot hotel". And if the signal is so poor that I have to give the phonetics twice (whiskey whiskey delta delta ...) I might as well give up without even trying.

I'm definitely going to request a vanity call as soon as they are offered to Extra-class hams.

Rich Wales (richw@mks.com) wrote:
: md_hill@CAM.ORG (Mark Hillier) wrote:

: Note that this does not mean that because you hold a
: license in either country that you can exchange it for
: an equivalent level in the other...there is NO recip-
: rocal licensing agreement.

: However, local officials of Industry Canada (the government department
: currently overseeing Canadian amateur radio) do have discretionary
: power to waive portions of the licensing examination for holders of
: non-Canadian licences who wish to become licensed in Canada.

: For example, when I (the holder of a US Advanced ticket) moved here
: from the US two years ago and applied for a Canadian amateur licence,
: I was given credit for the Advanced and 12 WPM endorsements, and the
: only exam I had to pass was a 26-question portion of the Basic exam
: dealing with Canadian amateur bands and operating rules.

: --
: Rich Wales <richw@mks.com>
: Kitchener, Ontario, Canada

Thats interesting because I was approached by a ham from the New Jersey
(who now lives in Montreal) who had passed his Technician grade license
and has 13 WPM. He was not granted the 12 WPM Canadian license because
the 13 WPM he did in Jersy didn't require him to SEND...only RX. So he
has to take the test.

Mark

The trashy language and subject matter discussed on AM CB is something I would not recommend for a child (or most anyone for that matter). The mean time between swear words etc is less than one minute. I plan to keep my kids away from CB (with ham radio).

The single side band CB'ers are a bit better. The radios cost about $125 to $150 rather than $50 to $100. Unfortunately the side band radios still get AM.

Rich Greenberg (richgr@netcom.com) wrote:
: BTW, what is the Gettysburg box number? Aren't the fees for license
: renewal (ham licenses anyway) a thing of the past?

According to the FCC regulations (97.19) the official address is:

FCC
1270 Fairfield Road
Gettysburg, PA 17325-7245

There are no FCC fees for issuance or renewal of an amateur license. The
VEC is permitted to charge up to a maximum of a specific fee determined by
the FCC for administering an examination for original license or upgrade.

>to be causing a problem.

I'd like to agree with Alan, at least in spirit, but in today's
liability climate, I cannot. If the problem is a dirty transmitted
signal, then Alan is right, hams are supposed to know better, and
know how to correct the problem, and in fact are *required* to solve
the problem. If the problem is in the consumer equipment, which it is
in most cases today, then the ham has no legal obligation to fix the
problem for the consumer, and may open himself up to liability for
tinkering with their gear. Sad but true.

As for a legally operated CB being unlikely to cause the problem,
some of today's consumer gear is so susceptable to RF interference
that that assumption is questionable. It was probably truer back
in the 1950s when the rule was made, and consumer gear was mostly
transformer powered tube gear.

Al, it's the *ARRL's* own published definition of good amateur practice
that I'm using, not something I made up to annoy you. It's like _Animal
Farm_ I guess, some animals are more equal than others. I recognize that
the ARRL's broadcast station has been doing this for many years, even
though their own operating guide tells "ordinary" amateurs not to do
it. If you'll recall, my original comment was that W1AW had made this
a defacto acceptable amateur practice, thus K1MAN couldn't be faulted
for doing the same thing. The rules don't give W1AW special status
in this regard, either everyone can quite legally fire up automated
broadcasts over other stations, or none can. I merely suggested that
if amateurs find K1MAN's practices objectionable, then they have to
apply the same standard to W1AW operations.

: > 'time' Morse Code; what I mean is, what is the specification for length
: > of a dah versus a dit, and the length of the inter-character and inter-word
: > gaps?
: >
: Scott - here is the specification you want:
:
: Using the length of a dit as the unit of measurement -
: 1. A dah is 3 times as long as a dit
: 2. Within a letter, the spaces between the dits and dahs are the same
: length as a dit
: 3. Between the letters of a word, the space is the same length as a dah
: 4. Between words, the space is the same length as 7 dits
:
: This is "standard" spacing. Using this specification, the speed in words
: per minute is determined by how many times the word PARIS can be sent in
: one minute (PARIS is exactly 50 dit units). The alternative "Farnsworth"
: spacing, which is used by ARRL and W5YI in their 5/13 wpm tests (and which
: I HIGHLY recommend as a learning method), uses characters sent at around
: 18 wpm with longer-than-standard spacing between letters and words to
: reduce the overall speed to the desired level.

Where did you read that? It doesn't say that in the rules. This
question has been brought up before, long before. At the time (and
I'll be first to admit that I haven't checked the wording recently),
the rules said "frequency band". Note the word band. All that was
required was that you id in the same band (and at that time, mode).

Mike, I guess the "NO's" have it. There are some very fine people on CB but they are out numbered by the one who use the foulness and disrespect that have given the band its rep. I have an 11 year old and there is NO way I would let her hear what comes across in cental Louisiana. I even know some of them and it's like they change into Mr. Hyde simply because they think they are anonymous. Sounds like another phone line or ham ticket are the way to go unless maybe you check into the VLF useage.

I liked W8UKI when I got it in 1940. In 1946 when I moved to 3-land
they gave me W3LXS, which you will have to admit is pretty bad,
phone or cw. I wrote a plain letter saying that I understaood
that 8's could change to 3 without suffix change because Western
Pennsylvania had been taken out of the 8th district, and that since
the 3's had obviously only got to L, UKI ought to be free. With
no red tape at all I got W3UKI back in the mail, telling me to
tear W3LXS up! Maybe the good old days weren't all so bad as
I remember.

: University of Alberta Edmonton, Alberta, Canada T6G 2G7

Hello Jim:

The only qualification for holding an amateur licence (for which a
Canadian call sign is issued) is that the applicant is the holder of an
appropriate certificate. See section 5.1 of the General Radio
Regulations, Part I. All other licences require the individual (or
corporation) to be a Canadian citizen (section 5, the preceding section).
Furthermore, the Radio Operators' Certificate Regulations are silent WRT
citizenship of candiates for sitting an examination for a certificate.

Therfore, with the greatest respect, the information that you have
received from the Edmonton district office is incorrect. There are no
citizenship requirements to hold a Canadian radio licence in the amateur
service. Therefore, local discretion WRT citizenship for this type of
licence is moot.

Yours respectfully
Jim, VE3XJ

: I'll attempt to follow up with a couple of chief engineer friends, and
: post their recommendations...

I will mention one caveat -- the AT&T Z100B1 filter is the recommended filter for AM broadcast telephone interference. By the reports I have received, it is not usually effective at the upper end of the HF band (> 10 MHz). This probably is a factor in the FCC's recent poor success rate with telephone filters. Filters optimized for HF will do much better.

Another good local source of help is your ARRL Section Technical Coordinator. Refer to page 8 of QST -- the Section Managers are listed. Call the SM and ask to be referred to the TC. (ARRL HQ can also refer you to a TC -- (203) 666-1541).

There are a number of RFI files available (among many others) at oak.oakland.edu (ftp) or by email from our automated server <info@arrl.org>.

Special Bulletin 33 ARLX033
From ARRL Headquarters
Newington CT December 12, 1994
To all radio amateurs

SB SPCL ARL ARLX033
ARLX033 New 144 MHz record

A new tropospheric ducting, continental distance record has been reported on the 144 MHz amateur band. On November 5, Rene Shaw, WB4MJE, of Big Pine Key, Florida, and Serge Szpilfogel, VE1KG, of Halifax, Nova Scotia, worked over a 1687 mile path.

The previous record was 1468 miles, set by K5WXZ and K1RJH, and had stood since October, 1968.

WB4MJE is crucially located for this work at the southern tip of the Florida Keys.

This information comes from Al Ward, WB5LUA, who maintains VHF and UHF North American distance record information for QST's ''World Above 50 MHz'' column. Records on bands from 144 MHz to 678 THz are published in April QST each year.

I double checked the math after posting this. And it is off.
It should be (aproximately for the nitpickers) 53 3/8".

468 * 12 / 100 = 56 1/8 and 56 1/8 - 5% = 53 3/8"

Error? roughly 16% Or a center frequency of roughly 86 MHz. Humm, still
inside the FM Broadcast band.

So for those of you without anything better to do. Check out the
folded dipoles sold with commercial FM broadcast radios. Let us know
what frequency range they would be safe to transmit on.

Double letters are difficult - I always have to pause between my two if using the phonetic 'Zulu'.

On the key, I have no problem. Is there any significance that most replies to date that have difficult phonetic callsigns like the CW version?

Regards Phil G3ZZA

>for a good 2m/440 HT. I have seen the TH-79A, the FT-51R and the
>IC-W21AT to name a few. Any recommendations on these or others?

I use the FT-470. You're unlikely to find one of those new, but they
should be plentiful on the used market. I like that radio for many
reasons, but primarily because it has such a good user interface, is
very rugged, and can accept *big* batteries for long duration use.
The current production FT-530 isn't bad either. The little shirt pocket
radios are cute, but I'm not convinced that they are all that practical.
The batteries are necessarily small, as is the heat sinking, they don't
appear to be very rugged, and the tiny controls can frustrate far-sighted,
fat-fingered operators.

Unfortunately, none of the current dual banders have much intermod
rejection. That can be a serious concern if you intend to use them
in high RF areas, like the downtowns of most major cities, or with
external antennas. The old IC32AT, a real horse, would be about the
best choice for a dual bander, but you're unlikely to find anyone
willing to sell you theirs. The current Radio Shack 2 meter and
70 centimeter rigs are derivatives of the single band versions of
that radio, and perform very well in high RF environments. If you
didn't need dual band capability, I'd suggest starting off with
the HTX202. It's a splendid amateur radio. All the others try to
pretend that they are wideband scanners too, and consequently let
in all the crud that causes the radio to howl and squeal in high
RF areas.

>73, Cecil, KG7BK, OOTC (All my own personal fuzzy logic, not Intel's)

Cecil is correct; there are many ways to "skin the cat" (or at least
three in the case of VOX). However, I was speaking in terms of the most
commonplace implementation, which is that the VOX is built into the
transceiver. But, there have been mny ARRL Handbook designs over
the years for VOX circuits, some to go between the mike and the transceiver
audio input and some to be installed as "inboard" additions to add the
capability.

There are also mikes available which provide the capability, as
Cecil pointed out.

But, since I never use the function I guess I'm guilty of taking
a simplistic view of it.....(blush).

orv@micom.com (Orville Beach (MIS)) writes:

I need some information on vhf packet and voice frequencies in
Singapore. Ideally, I'd like to communicate with a Singapore ham
via e-mail.

To which I respond:

Well, I'm not a Singapore ham, but I recall from a similar thread a few
months ago that there is little or no VHF amateur operation in Singapore.
The frequency allocations and station requirements are rather stringent,
and six months residency is required before you can start the licensing
process. This is all from memory, so I may not be at 100 percent, but I'm
not far off. I do recall with certainty that all radios must be of an
accepted type, and all accepted types are crystal controlled, no
synthesized stuff.

To Clemens and others who've asked: I'm not done posting the series
yet - I only want to post one part per week since each is so long.
If any of you want the complete series email me at
jeffrey@math.hawaii.edu (as dozens have already done - I'm
surprised at the interest in this stuff!)

Jeff NH6IL

P.S. This last weekend a ship in the North Atlantic broke up
in heavy seas; it's CW distress call went out over 500 kHz and
was heard and answered by CW shore stations up and down the
East Coast, and even by a West Coast CW shore station.
Contrary to what we read on here and over on .policy CW
is still in use outside amateur radio.

AND, it can even be in the Power supply! My Ten Tec power supply for the
Triton IV had a VOX unit built in to it. The mike connects to the power
supply, then a line from the power supply (vox) goes to the mike line
in the transceiver. :-) .

Hello Phil. Bruce Leonard - KC7FZE here. I too have a Z in my callsign
but actually don't consider it a bad call. I actually like it. When on 2
meters - the only thing I have at present - I and just about everyone
else here in Salt Lake City use "Zed" instead of "Zulu". We have a couple
out here - KB7ZZI, KB7ZZK - and both these guys use "Zed" instead of "Zulu".

When I mentioned only having 2 meters - actually I am general - and am
currently waiting for the XYL to let me buy a REAL radio. Perhaps after
the holidays....

Since PGP is specifically intended to encrypt the message it would
appear, ipso facto, to be exactly what the FCC intendes to prevent!
GIF's, compression, etc., are not intended to encrypt or obscure the
contents of the transmission and, indeed, can be "read" by anyone
interested. Thus, they are allowed.

You are right, of course, that PGP is usually intended to obscure meaning, but there is an exception that I think IS permitted by the act. If I send you my public key (and you know it really IS mine), and then I send you my signature in PGP, and you can use my public key to decode my signature, then you know it's the genuine signature. Here I am not at all trying to obscure my meaning. Indeed, I'll be glad always to provide an open translation of the PGP

signature. But I'm gaining a form of surity that could make ham bbs more useful in many ways.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 13/2330Z DECEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 13 DECEMBER AND FORECAST FOR 14 DECEMBER - 16 DECEMBER

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 97/44

GOES satellite data for 12 Dec
Daily Proton Fluence >1 MeV: no data
Daily Proton Fluence >10 MeV: 1.2E+04
Daily Electron Fluence >2 MeV: 7.4E+06 (normal)
X-ray background: no data
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
14 Dec 15 Dec 16 Dec
Activity Low to moderate Low to moderate Low to moderate
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 14 Dec: 95/41

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 12 Dec
Learmonth 11 3223 3322
Fredericksburg 14 10
Planetary 13 9

Observed Kp for 12 Dec: 3322 2322
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
14 Dec 8 Quiet to unsettled
15 Dec 8 Quiet to unsettled
16 Dec 16 Unsettled to active
COMMENT: IPS Geomagnetic Warning 11 was issued on 13 December and is
current for interval 16-17 December.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
13 Dec normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
14 Dec normal normal fair
15 Dec normal normal fair
16 Dec normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
13 Dec 52 about 15% above predicted monthly values

Predicted Monthly T-index for December: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
14 Dec 40 Near to 15% above predicted monthly values.
15 Dec 30 About 10% above predicted monthly values
16 Dec 25 Near predicted monthly values
COMMENT: IPS HF Communications Warning 14 was issued on 13 December
and is current for 17 December.

In article <3cico9$6u1@canyon.sr.hp.com>,
alanb@sr.hp.com (Alan Bloom) writes:

| As a practical matter, it simply isn't possible for W1AW to listen
| before transmiting. They use something like 10 different frequency
| bands simultaneously.

The Amateur broadcast station VK2WI can, and does. When the switch is hit, all receivers (from 160m to 23cm) are enabled for about 5 seconds (a manual check is performed beforehand). If a conversation is in progress, we ask them to move, and they usually do. If they don't, we simply do not transmit on that band until it's clear, and we make it known during the broadcast that 3.595 MHz (say) was occupied.

If VK2WI can do it, so can W1AW - the former is hardly a model of sophistication; it takes two people (announcer and engineer), but can be driven by one.

Just to keep the record straight, there are two Jeff's taking opposite views: The homodisgusted Jeff NH6IL, and the heterophobic Jeff WA6???. The following is between the WA6 Jeff and Brian. Hope that clarifies what follows.

Jeff NH6IL

The World of Ham Radio includes a callsign database in D-Base format that
may be read by MAC databases, or if you prefer you can run PC-Soft by Insignia
Solutions and enjoy the complete CD-ROM. The January 1995 release will be ready
for shipment on December 22nd. Callsigns are current thru December 01, 1994.

This CD-ROM is ISO-9660 and can be read on MAC or IBM CD-ROM drives.
A MAC directory contains Mac programs.

Cost is $40 plus shipping. Call 717-938-8249 to order with Visa or MasterCard.
Fax 717-938-6767. E-Mail amsoft@epix.net

THOMAS P. DENNY,GOLDEN,CO USA (ub268@ciao.trail.bc.ca) wrote:

: I am collecting information on linked repeater systems (2 meter
: in particular), and understand that there is one (perhaps two)
: such systems which run between Arizona and Colorado. I have heard
: the names Cactus Net and Northlink used for such systems. Any
: information that any one might be able to supply one either of
: these would be greatly appreciated.

Here's what I know for the West, quickly:

Another poster described the ZIA net. It works very well and was
all up a few weeks ago, at least. Mostly 2M, 440 into CO.

There's another linked system between AZ and southern CA that,
I believe, stretches more or less from Wickenburg AZ to San Diego.
Perhaps that is the "Cactus Net"; I don't remember the name.

Northlink repeaters cover AZ from about Phoenix north to Navajo Mtn in
southern Utah. A mostly 440 with some 2M system. You can get into it
from from SW AZ to high spots in Canyonlands NP around Moab, Utah.
Last time I heard, a critical link was missing in Flagstaff, dropping
off the Navajo Mtn repeater.

Condor, a 220 MHz system covering south to north in CA. Don't
know much about this one.

Evergreen Intertie, a huge system stretching from Oregon into
Vancouver, BC north and around Billings, Montana east. I heard
that the fringes in Montana were tired of all the traffic and
turned off their full-time link. Very busy, only short contacts
allowed by general agreement.

Colorado Connection, a Colorado-only 2M system covering generally a
big east-west chunk of Colorado, from the NE part of the state to
Grand Junction. It has a few 13K ft sites that are very tough to keep
going in the winter. It does not cover the far SE, SW and NW corners
of the state very well or at all. It can be accessed from just a few
high spots in Canyonlands, NP around Moab and around milepost 190-200
on I-70 in Utah (thru the 146.985 Rifle repeater).

The HERC system in Wyoming. Good coverage along I-80, on I-25,
and north-central Wyoming. Seems to not be linked up very well
at the moment.

I'm sure there are more...

>and is suitably enthusiastic about their use in enforcement - so the logical
>conclusion would be that any matter which appeared to be beyond the ability
>of the FCC to enforce, would fall to the FBI.

I like the way the FCC works. They quietly sit back, collect complaints,
monitor the offending station over a period of time to collect evidence,
and finally knock on your door with a notice of violation, and with the
assistance of US marshalls, remove your equipment.

This frequently happens here in Hawaii. Some anti-US Hawaiian group
will try to put a broadcast station on the air without a license
(claiming they're immune from US federal laws). They only last a few
days before the marshalls and FCC swoop in for the kill, usually
at 3 a.m. (when no one's at the station).

I wonder what the FCC does with all the equipment they confiscate?
It's certainly not stuff that should be auctioned off.

The only mod that is easy that I know of is the unrestricted 800 Mhz mod, While holding down the a, 3, and # keys with the power off, you turn on the power.

Geeze. Step out for a few years and come back, what do you find?

Two of the most respected names on this forum saying the same thing and
arguing nits with each other.

Hope you guys can find some common ground. There are a lot of people out
there who need you.

Joe

Ham radio will die when we do.

Ambulance chasing emergency services geeks, heinous broadcasters, psychotic DXers, ravenous contesters, clueless newbies with 5 character calls, and stubborn old men who still think all knobs are made of bakelite not withstanding:

Ham radio is damn fun. People do fun things while their fun, and stop when they cease to be so. But we see through your clever little ruse.

Anyone who professes ham radio's death is simply trying to clear the bands of the rest of us to get un-QRM-impeded access to the next 3Y DXpedition.

Joe

>
>If W1AW transmits without listening
>and someone is using that frequency when W1AW transmits, it appears to
>me that they could legally be described as "intentionally" and
>"willfully" interfering with another "radio communication or signal."

It's all about intent. W1AW does not intend to clobber you, they don't
know your there. I don't think you could convince an FCC administrative
law judge (ALJ) that their interference is willful, and you could never
convince him that it is malicious.

I think you could probably convince an ALJ that a station who "plays the tape"
over the net intended to interfere, but whos got the time?
One jamming technique that I have seen used in the 40 meter war zone against
WCARS is breaking with a call, when acknowledged by control, saying "thank you,
I have a QST for the net" and proceeding to play the 90 min tape. The intent
is to interfere, but its hard to prove.

Personally, I despise the W1AW arrogance of "we own these freqs", but I
can't offer a better solution using current ham technology.

A friend of mine and myself are considering setting up a packet system on 6 meters. I would like to hear from anyone that has had any experience with 6 meters packet. Is there anyone out there running 6 meter packet? If there is what frequencies are generally used and what is the general range between digi's or nodes?

Any help or comments would be most appreciated.

Thanks for your time and help

4139. TAPR Information and Internet Access

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-14 04:06:37 UTC
From: gjones@tcet.unt.edu
Message-ID: <3clr0d$j7v@hermes.unt.edu>
Source record: 255193

Periodic Announcement - TAPR Information and Internet Access

Greetings from TAPR!

TAPR can be reached via the Internet. The Automated Information Server that TAPR provides allows anyone to request information on TAPR, products, newsletters, and lots of other files. To find out more about this service, send an e-mail message to listserv@tapr.org with the subject line "Request" and the following text in the body of the message:

help (for a brief set of instructions)
index -all (for a list of all file by topic area)
get tapr taprinfo.txt (or info on TAPR)

In the above message example, "help" retrieves a brief set of instructions for info, "index -all" retrieves a list of available files by topic and "taprinfo.txt" retrieves a text file containing information on TAPR and what TAPR is all about. If you want to retrieve several text files with one message, use a separate line for each "get filename" request.

Special Interest Groups

TAPR maintains several SIGs in various areas. To get the latest list of SIG groups, send an e-mail message to listserv@tapr.org with the subject line "Request" and the following text in the body of the message:

lists (for list of mail groups on TAPR.ORG)

To request the information on any mail group, send an e-mail message to listserv@tapr.org and in the message text include:

information listname (where listname is the name of the mail group)

When you are ready to subscribe, send e-mail to listserv@tapr.org with the following command in the message text:

subscribe <list> <your name>

List should be the name of the mail list you want to join and Your Name should be both your First and Last Name.

Current SIGs include:
NETSIG Regional Networking SIG
BBSSIG BBS SIG
HFSIG SIG on HF Digital Topics

DSP DSP Software Development Forum
DSP-93 SIG for those that are building TAPR/AMSAT DSP-93 kits

---

FTP users

The TAPR Software Library is now available via anonymous FTP. You can access the library by ftp access to 'ftp.hereford.ampr.org' in the directory pub/hamradio/tapr. Login in as 'anonymous', with a password of 'your_account@internet_address'.

Packet Raido and TAPR is on the World-Wide-Web!

The series is accesible through the Packet Radio Home Page at this URL:
http://bb.iu.net/infomotion/taprhome.html

http://bb.iu.net/infomotion/pkthome.html

What's here? A page of links (the Home Page), the TAPR Home Page, a page of Packet Pioneers and Contacts, a hypertext packet primer and FAQ, and more.

Thanks to Howie, N2WX, President of Infomotion, for his support and invaluable contributions of the TAPR page.

This was my original post:

"Hello,
Has anyone here had problems with the Kenwood 732. I sent the radio back because the power output on the 2mtr side died. They had the radio for 2 days and sent it back after having, quote "Repaired APC circuits. Resoldered all joints and do corrective/preventive repairs on TRX unit and APC 023 protect mod. Full function test rx/tx GOOD. 2 mtrs po 50/12/5 Stable." unquote.

This seems to translate to "could not find the intermittent problem."

The radio worked for 3 days and now does not put out any power on the 2mtr side. It is back in the brown truck to Long Beach.
Have you had similar problems? Please let me know, I would like to suggest to the kenwood folks a plan of attack to fix this problem.

Please reply here or e-mail me. I may post your replys minus your name if you have a similar story to save the next ham radio brother (sister) a few UPS charges.
==========

I got some very interesting notes back, some defending Kenwood and some chastising them.
I was gona post some of the replys here but the bottom line as told to me by a local Kenwood repair shop is this.

Kenwood has cut the size of thier heat sinks by about 2/3.

They thought they could get away with using NO HEAT GREASE between the power modual and the sink. The thought here was "Nice machined surface on the heat sink, nice smooth service on the modules, no grease, save .002 per unit.

The problem is the module is cast not machined. This cost them an unknown amount in returns and repairs plus the bad publicity.

This is part of a reply I got back:

"Well, when Kenwood uses small heat-sinks and then forgets the no-brainer of putting thermal silicone/zinc-oxide on final power modules the suckas burn up. Obviously if you want Motorola or GE quality- guess what you buy... But on the other hand, I own 4 kenwood radios, and I've checked them all- not a spot of grease between the modules and the heatsink- so the sink stays cold and the module burns up. **HINT** rip off the cover and grease them up **NOW**!!

Another :

"I hope so. Between this whole mess, and the idiocy of their new HT (Th79) that
lacks a memory channel scan lockout feature, I have some doubts whether Kenwood
is really thinking about the Ham market, in any serious manner.

I know my next HT will probably be Yaesu. If it wasn't for the successful
741/742 - My Kenwood loyality in mobile transceivers would be lost also.

==========

The final word from the local repair shop is "get an amp and use low power
seting to talk simplex.
WONDERFUL, after spending $600.00 + on a radio you must also than spend
another $200.00 for an amp.

Does Kenwood really care about the ham business?

This will hopefully warn some of you who have out of warranty radios.

There are actually some countries that issue callsigns ending
with a -LID suffix!

It might not _sound_ too bad, but it sure has a bad "ring" to
it. Would you answer a call from a -LID ham or would you take
it to be a "pirate"? The authorities don't issue certain
suffixes since they might be offensive (to non-hams that is).

It seems hard to convince them that certain calls are
offensive to other _hams_.

In article <3cm6rv$9r1@news.panix.com> jconsole@panix.com writes:

>can anyone point me to anywhere that i can get info on
>"Spread Spectrum"

>i can't find anything !!

What level of electronic expertise do you have? Books on the
subject cover a "wide spectrum" ;-)) from hobbyist to PhD.

The problem with SS is that it is a relatively new modulation
technique (as far as commercial and consumer implementations)
and many books still attack it form the PhD-level attempting to
explain why (or why it doesn't) work in certain instances. These
books, while useful, do NOT contain any practical circuits or
applications. Be prepared for tons of equations and lots of
"dry", black-board style theory.

There are MANY real-world SS deisgns out there, however.
But most real-world designs are somewhat proprietary and,
as such, are not published or talked about in any real detail in
the technical journals. The most notable exception is cellular
CDMA (Code Division Multiple Access), a form of direct-
sequence spread spectrum.

There are quite a few entry-level articles out there on the subject
of SS if you subscribe to and read the right magazines.
Try these...

Microwave Journal, Mobile Radio Technology,
Microwaves & RF, RF Design, Electronic Design
Telecommunications, Wireless, Cellular Business

If you have acces to WorldWideWeb, you can even net-surf
at such places as www.qualcomm.com, www.motorola.com
www.ericsson.se and a few others. You never know when
a new article might turn up.

You can also try some usenet groups other than the amateur
radio areas. Try comp.dcom.telecom.tech or comp.std.wireless.

A good "technician level" book is the ARRL Spread Spectrum
Sourcebook. It is a compendium of articles from a variety of
sources. It is NOT a text-book style EE-type book, though
even EEs would find it interesting. It includes text on
theory and even do-it-yourself projects (amateur radio license
required depending on power llevels). You can order it

from the American Radio Relay League (ARRL) at
203-666-1541. It's around $20.00 or $30.00 (I don't have mine
here with me right now and I forget the exact price).

As far as detailed undergraduate or graduate EE type text
books, I would think any college or university which has an
EE program would have some books on the subject at the
campus bookstore. Be prepared to pay at least $75.00 for
such texts.

Another option is to call Artech House publishing at
617-769-9750. IMO, they have an EXCELLENT selection of
EE-type text-books covering RF telecommunications.
Ask for their Winter 94-95 "COMMUNICATIONS" catalog.

Titles include...

Wireless LAN Systems, Broadband Network Analysis and
Design, Wireless Data Networking, Introduction to GSM,
Personal Communications Systems and Technologies,
Mobile Communications, Cellular Radio: Analog and
Digital Systems, Digital Cellular Radio, Cellular Radio
Systems, Smart Highways-Smart Cars, Mobile Information
Systems, Land-Mobile Radio System Engineering, Radio
Relay Systems, Packet Video, and at least 50 others I
didn't mention.

That should keep you busy! ;-)) Have fun!!

Hey guys I love your discussion. Is there anyway you can move it to the rec.radio.amateur.policy group? I started the thread here and it is getting hard to keep up with it in two different newsgroups.

By the way I would like to go on record and say that comparing the K1MAN "broadcast" to W1AW is like comparing the "Constitution of the US" to the City charter of "Hickory Flat".

This thing with Glenn Baxter has a very negative essence. You would have to be involved to understand. He is very malicious and aggressive in his attack. It is in the best interest of all on amateur radio to stop this reign of his even if it means stopping all broadcasting.

Now I don't propose to have a legal mind. Although it doesn't take a rocket scientist to figure out if very many people follow Baxter's lead we will really have a mess on HF. Think about that. A hundred or so self proclaimed torch carriers on every band. Transmitting dirty signals of what they feel passionate about. Then you have the ones that are not sincere they just want to be heard.

Hi!

How about EI4ESH or similar, a real treat on CW!

I have real trouble with those calls with trebble letter suffix,
like the guy with RRR, who used roger,roger,roger as phonetics.
(Why is he acknowledging mines and not giving his? was my problem)
In any case under weak sgs it is hart to tell if someone is just repeating.

Locally there are a few hams around, priding themselves of a SEX suffix.
Do they get issued in the States?

KC5JRR David Jenkins (djenkins@jetson.uh.edu) wrote:
: Am considering phone operation, but have to invest in a mic. Is VOX a
: function of the mic or is the circuitry in the transceiver?

Either. There have been mics with VOX built in--I remember a Telex mic
that used a little battery. Icom even has a little box for adding VOX.

: Would it be possible for me to buy a mic that will work with the Argonaut
: but will be usable on a newer rig if I ever do purchase one? Are there
: adapters that will take a 4-wire (I guess) connectiog cable to 2, and vice
: versa?

There isn't a standard for mic connectors. Heil, who makes microphones,
first started selling 4 different versions of each mic--one for Yaesu,
Ten Tec, Kenwood, and Yaesu, each with the appropriately wired connector.
They still do, but have an intermediate connector, so you can buy a
different adapter cable in case you change rigs.

I have to listen to this myself to make a judgement about it. One thing is for sure though; Part 97 does not state that only the ARRL is allowed to transmit one way communications (as long as some specific criteria are followed which I will leave up to the reader to look up).

I did chuckle at the comment by someone that the intent of the a transmission had to be to interfere in order for it to be interference. That seems to say that contesters (or SSTVers, or whomever) should be able to CQ anywhere in the band without regard to what is going on on that frequency (The comment used the logic that if you don't listen, then you don't know that the frequency is in use, therefore how can you intentionally be interfering). Wow, I am excited to try this concept out during the next contest I dabble in (The humor impaired may insert a smiling emoticon of their choice here).

Anyway this thread has been/is very entertaining. I am amazed at the variety of thoughts on the subject. It doesn't take much controversy in a posting to create such a stir. Such a large plant from a mustard seed (Yes this is a biblical reference).

Source record: 255205

I'm sure there are others with more experience than I with the FT11R
who would be more than willing to point out any errors in my
advice...so here is my 2 cents worth:

The "battery eliminator" for the FT11R is actually a cooling unit
(quite pricey) which attaches to the radio. Operating at 12 volts
creates more heat than the radio alone can dissipate (due to its small
design). Operating the FT 11R at this power without the cooling
accessory can damage the radio.

Running the radio on any properly regulated (and rated) power supply
is simply a matter of making up an appropriate power cord, as long as
the supply does not exceed 7 or 8 volts. It would be best to check
with Yaesu for their recommendations about maximum supply voltage.

4156. Connecting SWR analyzers and low-pass filters to ladder line fed antenna

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-14 15:44:04 UTC
From: djenkins@jetson.uh.edu
Message-ID: <3cn3s4$7bg@masala.cc.uh.edu>
Source record: 255207

I use ladder line to feed a dipole. I notice that many low-pass filters
and SWR analyzers typically are depicted with coax connectors. The
transceiver I use has balanced output as well as coax. How would I connect
a coax-connector-equipped filter to the transceiver? Would it suffice to
create a little pigtail terminated with a coax connector, and just tie
one end to the transceiver balanced connection and the other to the filter?.
On the feed line side, is there a problem with terminating the feedline
with a coax connector?

How would I use a coax connector equipped SWR analyzer in conjunction
with the ladder line? Again, if I terminate the ladder line
with a coax connector, will that suffice? Any caveats?

An obvious starting point is the ARRL Spread Spectrum Sourcebook.
It's a bit light on information theory, and a bit dated in some
of it's technology, but it's large and has pointers to other more
detailed sources.

Hi David, Your SWR meter is probably 50 ohm unbalanced so you need a
balun of some kind between the ladder-line and the SWR meter. A choke
balun will give you a 1:1 transformation. The object of these measurements
is probably to make your antenna system work with your transceiver so
merely duplicate that configuration for your testing. If you are using
the balun built into your antenna tuner then you need to duplicate that
same balun ratio for your SWR analyzer. A 50 ohm SWR meter hooked directly
into the ladder-line will not indicate the SWR on the ladder-line. For
300 ohm ladder-line you would need a 300 ohm balanced SWR meter to obtain
a valid reading.

...I have to laff at the previous suggestions about contacting the ARRL, etc, because the ARRL is busily engaged in the VERY SAME activities that K1MAN does.... sans perhaps the "newsy" interviews etc... out here in the southwest and western US the Amateur Radio Newsline broadcasts are aired regularly over the repeaters with few complaints, but of course most of these "broadcasters" monitor the repeater before beginning the broadcasts and ask if anyone else desires to use the repeater, etc.
One of Baxter's "grinding axes" is that he is merely emulating what the FCC allows the ARRL to get away with... broadcasting.
It's a real laff that K1MAN is complaining about OTHERS interfering with HIM. I'd almost support some of K1MAN's precepts EXCEPT for the fact that he is openly trying to "claim" the frequencies he uses for his broadcasts, claiming he needs them "open" for "emergency communications" at all times, and supposedly his broadcasts are part of a plan to discourage use of these freqs by ordinary ham QSO's.
As I understand it Baxter's many assistants are of usually short tenure as they become aware of fallacies in K1MAN's "gospel". With the average ham age at 62+, K1MAN surely has only a few more short years on this planet.. spending his time and money on such an IMPORTANT pursuit. In a few years at most he'll be gone and it will be difficult to find someone else as knot headed and wealthy enough to carry on the "work".

I recently received a Santec HT-1200 that seems to be a good little radio
EXCEPT I have no instructions with it and have been unable to hack my
way thru a successful procedure to enter and STORE a memory frequency.
What are the keystrokes to save a new memory channel? I can get the
frequency entered... but cannot get it into a memory.

4167. CW operating procedures

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-14 17:02:56 UTC
From: djenkins@jetson.uh.edu
Message-ID: <3cn8g0$9u0@masala.cc.uh.edu>
Source record: 255222

I was taken to task by N9CBM this morning for ending my CW transmissions with a KN. He said that a K would suffice and the KN branded me as still a Novice. Since I started operating, I have been puzzled by this very issue. I have observed the following methods by hams when ending messages:

texttexttext AR to-sign DE from-sign KN
texttexttext AR to-sign DE from-sign K
texttexttext to-sign DE from-sign AR
texttexttext to-sign DE from-sign AR K
texttexttext to-sign DE from-sign AR KN
texttexttext to-sign DE from-sign KN
texttexttext to-sign DE from-sign K
texttexttext BK to-sign DE from-sign K
texttexttext BK to-sign DE from-sign KN

and of course sometimes just:

texttexttext BK

I'm sure there have been others, but offhand I just can't recall them. *Is* there a "proper" way to sign over the call? Are there subtle (or not-so-subtle) differences in the meanings of the various ways shown above?

Also, when stations are initiating an end to a call, they may send:

texttexttext SK to-sign DE from-sign K
texttexttext SK to-sign DE from-sign KN
texttexttext to-sign DE from-sign SK
texttexttext to-sign DE from-sign SK (repeated some number of times)
texttexttext AR to-sign DE from-sign SK

and possibly others. I guess the last line says that from-sign is going to be clear once he/she has heard one last time from to-sign. The others, though, appear to be used interchangeably. Once again, what is de rigueur?

Finally, the ARRL handbook (1994) does not differentiate well between AR, KN and K. I infer that K indicates that I'm inviting anyone to respond (typically after a CQ?), but beyond that the differences escape me. Can someone explain when one might be preferred over the other?

My apologies if these issues are treated in a FAQ somewhere--just point me to it.

: purpose of Morse code testing is "to prevent congestion of the HF bands"?

It may not be the "purpose of testing", but it certainly does have that
effect. If every CW QSO taking place on 20 meters were to be done on SSB or
digital, 20 meters would be quite a bit more crowded. In fact, that may be
the best of all reasons for SSB ops to WANT to keep the code testing... to
keep all us CW folks away from their part of the band. :-)

: I'd like to agree with Alan, at least in spirit, but in today's
: liability climate, I cannot. If the problem is a dirty transmitted
: signal, then Alan is right, hams are supposed to know better, and
: know how to correct the problem, and in fact are *required* to solve
: the problem. If the problem is in the consumer equipment, which it is
: in most cases today, then the ham has no legal obligation to fix the
: problem for the consumer, and may open himself up to liability for
: tinkering with their gear. Sad but true.

Gary is quite correct; tinkering with a neighbor's equipment can get you
into problems. However, as a good neighbor, as the *technical* part
of the public service of Amateur Radio, a ham can help a neighbor locate
interference solutions and understand the installation instructions
supplied by the filter manufacturer, etc. This is probably the intent
of the FCC when they suggest that the ham and neighbor cooperate to
resolve an interference problem. The Amateur Radio Service, as a community,
has access to the needed information, and amateurs, as individuals, usually
have the technical knowledge to interpret the instructions and help a
neighbor.

While a ham is not *required* to do anything other than comply
with Part 97, if all hams did in life is what is required of them, we would
probably not be seen as such a valuable asset to the world at large. If
there is an interference problem, the ham may not be the *cause* of it all,
but is is a problem that *involves* the ham. Part of our existance is
justified because Amateur Radio increases the self-taught technical
knowledge of its operators. There is no better place to apply that technical
knowledge than to a neighborhood problem.

As I look at my neighbors, I remember they are neighbors. These are the
people who watch over my house while I am on vacation. If I can offer them
help by explaining the issues, finding filters and helping them to get them
installed, I will do it. It just seems like the neighborly thing to do.

: that that assumption is questionable. It was probably truer back
: in the 1950s when the rule was made, and consumer gear was mostly
: transformer powered tube gear.

While SOME consumer gear falls into this category, the existing standards for European marketing and the emerging standards for US manufacturers actually make is more likely that a brand-new TV or VCR will be more immune to interference than one made 5 years ago. The advent of cable has helped improve TV design, too; a TV must be able to select a channel with adequate rejection of an adjacent channel. The TVs of the 1950s did not have this degree of selectivity. In fact, the FCC takes this into account when they assign TV channels by not assigning adjacent channels in the same market.

Unfortunately, with some types of equipment, such as telephones, this rosy picture doesn't apply. :-)

Joe, you obviously don't understand the power of money. Our frequencies
are desired by organizations with powerful lobbyists, lawyers and other
strange forms of life at their disposal. My point in the original post
was that if we don't make ourselves indisposable, we will be offered up
to the cellphone, pager, and PCS industry. Take a look at the loss of
rights of the gun ownership crowd if you think the government will
benevolently look out for your "damn fun" hobby. Many people were heard
to say, years ago, "they will never be able to take away our guns or our
right to hunt etc etc etc" and now its right on the chopping block. We
better get off our collective rusty dusties and make ourselves useful or
the spectrum will be auctioned off to the highest bidder (or the bidder
with the highest paid lawyers).

Yeah, the world is full of people with severe inverse cranius rectus.

The repeater my dad (KE4IDB) often uses is being attacked by someone who apparently stole a radio. This person will bring up the autopatch during conversations, transmit a dead carrier, close the autopatch during its rightful use, etc etc. Another Stupid Jerk.

In my local area, we had a guy who was using the autopatch regularly without IDing. When asked to ID, we got silencio. Some ingenious ham rigged a VOX audio recorder and taped one of his calls over the autopatch. He fed the audio through a DTMF decoder and got the number called. Gave the whole mess, recording and all, to the FCC who charged the call RECIPIENT with illegal xmission. That guy sung like a bird and the FCC was able to bust the originator of the call. Another stupid jerk, but this one got caught. (this anecdotal story was related to me over the repeater - I did not witness any of it except the actual unidentified use of the autopatch) Catch em if you can. I hear it feels real good when you do.

David Jenkins (djenkins@jetson.uh.edu) wrote:
: I use ladder line to feed a dipole. I notice that many low-pass filters
: and SWR analyzers typically are depicted with coax connectors. The
: transceiver I use has balanced output as well as coax. How would I connect
: a coax-connector-equipped filter to the transceiver? Would it suffice to
: create a little pigtail terminated with a coax connector, and just tie
: one end to the transceiver balanced connection and the other to the filter?.

Hello David:

In all likelihood, the connection that you have proposed would likely
render the operation of the low pass filter useless (at best) and could
potentially destroy the transmitter (depending on the robustness of the
final circuit of the transmitter). The design of low pass filters with
coaxial feed shunt the unwanted signal to ground and letting the desired
signal pass through. In the connection that you have proposed, the signal
on one side of the balanced line would be shunted to the other side of the
line because the "ground" side of the low pass filter is connected to the
other wire in the balanced line. Since the ground side of the filter is
not at ground, but is floating, it will not perform as a low pass filter
anymore, at least as designed by the manufacturer. Therefore, there is
every reason to believe that there is a probability that the output on one
side of the line will shunt to the other side. This is commonly called a
short - and that potentially has undesirable effects upon the ouput of
your transmitter. Therefore, don't do this.

: On the feed line side, is there a problem with terminating the feedline
: with a coax connector?

It is the same story as above.

You have some options here.

1. Dont't bother using an outboard low pass filter. I suspect that this
may be the case because with those dual outputs, which haven't been seen
on equipment for a good many years, I better that the output tuning
network was pretty hefty and wide ranging. Again, without having some
experience and knowing what your operational situation is, it is
difficult to judge at this distance.

2. Abandon the use of the balanced output. This means that you will
have to have a chunk of coax from the transmitter to the filter, then
another chunk to a tuner with a balanced output (perhaps you can get away
with just a balun without the tuner, but that is the exception, rather
than the rule.

3. Use the balanced line but use a proper balanced line low pass filter. In this instance, your current low pass filter is NFG for this application. If you wish to put a low pass filter using your balanced line, then you will need a proper balanced line low pass filter. There are two input lines, two output lines and a ground terminal (guess where all the bad signals go?). The problem is, you will probably have to home brew one of these boxes because I am not aware of any commercially available balanced line low pass filters (perhaps someone else might know of one). I seem to recall a design for one of these devices in earlier version of the Radio Amateur Handbook by ARRL, but I could be mistaken.

: How would I use a coax connector equipped SWR analyzer in conjunction
: with the ladder line? Again, if I terminate the ladder line
: with a coax connector, will that suffice? Any caveats?

First, why are you trying to measure SWR on a balanced line anyways? Minimizing SWR is of great concern with coaxial lines, on balanced lines, the loss is insignificant. But let me know what your objective is.

With respect to the caveats, yes there is one. Since you are taking a reading of a balanced line with an instrument calibrated for unbalanced operation, your measurement would likely be meaningless. You should have a balun (1:1 or 4:1 types are OK, but the latter may be better depending on the instrument in use) so that it "converts" the balanced line into something that the SWR analyser is comfortable in measuring.

There is another way - set up the analyzer to operate as a grid dip oscillator and make your measurements as you would with one of those devices.

I hope that this has been helpful.

There IS a right and wrong was to use these prosigns.

AR is used in the format <call> AR. It indicates you are turning it over to a
specific station.

K means "Any station transmit". It invites anyone listening to respond.

KN means "Specified station only, transmit". It is used when you're talking
to a specific person and only want them to respond.

There is, generally, no good reason to combine the prosigns (ie, AR K)
I sometimes do it because I like the rhythm of it...it's not necessary though.

In practice, AR and KN are often interchanged.

From: kf7qz@bcstec.ca.boeing.com
Message-ID: <D0tGB8.9LD@bcstec.ca.boeing.com>
Source record: 255028

Howdy all. I have just a small idea about fee's. They might not be
that bad at all. Just think of it, if we generate several million
dollars into the Fed for your licence privliges, how apt are they to
take away from Amateur Radio. I started out by paying for my Novice
and General and we had no problems with the FCC taking frequencies away.

Now with no or limited fee's they are giving stuff away to those who pay.

I for one would not mind a 10 or 15 buck a year fee (payable yearly) to
pay for the "Status" of Amateur Radio Operator.

Before you send flames please think it over carefully. As I said before
if we generate several million in revenue they are not apt to oust the
Amateur Radio Operators.

--------- Response ---------
I certainly hope N9CBM doesn't here one of my QSOs, he will blow
a gasket. There are suggested procedures, but as the years go by
most operators get relaxed and don't bother with AR, BK and so and
use whatever feels comfortable. None of it is wrong and using KN
certainly does not label a person as a Novice.

If my memory serves me, K means over (anybody can answer). KN means
over to specific person, the person who I am currently talking to
(and not to anyone). I don't see anything wrong with using KN
during a QSO. AR, on the other hand, means out, I am finished with
the contact. Using AR K is not purely correct because the combin-
ation means out-over.

Anyway, I hope N9CBM doesn't hear me, because I use K, KN, BK,
dit dit and sometimes nothing.

Hang in there, enjoy your hobby and don't let the small things
get in the way of your enjoyment.

From: alanb@sr.hp.com
Message-ID: <3cnk6h$4hp@canyon.sr.hp.com>
Source record: 255033

David Jenkins (djenkins@jetson.uh.edu) wrote:
: I use ladder line to feed a dipole. I notice that many low-pass filters
: and SWR analyzers typically are depicted with coax connectors. The
: transceiver I use has balanced output as well as coax. How would I connect
: a coax-connector-equipped filter to the transceiver? Would it suffice to
: create a little pigtail terminated with a coax connector, and just tie
: one end to the transceiver balanced connection and the other to the filter?.
: On the feed line side, is there a problem with terminating the feedline
: with a coax connector?

Adding a coaxial low-pass filter to a balanced feedline probably won't work very well. You will only be low-pass filtering one of the two balanced wires. (The other side is connected directly through the case of the filter.) You likely would actually get MORE feedline radiation of harmonics since common-mode currents would no longer cancel. Even at HF frequencies, the filter would unbalance the line to some extent.

: How would I use a coax connector equipped SWR analyzer in conjunction
: with the ladder line? Again, if I terminate the ladder line
: with a coax connector, will that suffice? Any caveats?

Ideally, you would connect all coaxial accessories with coax and use the transmitter's coaxial output connector. Then use a balun to connect to the balanced feedline. You can make a balun by simply wrapping many turns of RF-58 coax around a large ferrite toroid. You could also simply connect the balanced feedline directly to the coaxial output, which would probably work fine in most cases.

This assumes you are using low-impedance feedline with a reasonable SWR. Low-pass filters are designed to work into a specified impedance (usually 50 ohms). If the SWR is too high, they may arc over or fail to give proper harmonic rejection. The solution is to use an antenna tuner at the input to the feedline so the filter always "sees" 50 ohms.

I think it all boils down to one thing is it malicious interference?

None of us have rights to any frequency in the amateur bands regardless
of how long or who you are.

If this individual is causing malicious interference then it is illegal
and the FCC will fine for that.

But just because a group or a net for that matter has been meeting
there for ?? years(you fill it in) does not give the net or anyone
else exclusive use of the freq.

It is all in Part 97.

73, joe, N8XCT (a fond reader of Part 97).

PGP is capable of just plain encoding as well. The algroithm used is known
as Radix-64, and is slightly more efficent than UU/XXEncode. You could try
to do some tests or something, the commandline is to just use -a
(Ascii-Armour)

As for PGP Sigs, use the 'clearsig' method, as otherwise, I'm sure others
would take to that as encryption.

Rgds!

>practiced for sending GIFs and binaries, so I was wondering if PGP
>is okay also.

When you say 'use PGP on messages', you're (IMHO) encompassing -everything-
that PGP is capable of. And one of the very fundemental purporse of PGP is
to provide a secure means of encryption.

Encryption is _not_ allowed on amateur bands, be it you use it on packet, or
voicePGP (Not available yet, but there are other s/w that can encrypt voice
phonecalls and stuff)

Next: What you _CAN_ use PGP for on packet are:

a) Radix-64
A method of encoding, very similar, but slightly more efficent
than UU/XXEncode, and a few other forms of 8bit->7bit encoding
routines.

No key or anything is required, one just needs PGP, and type
PGP <filename> and out pops your file (it's supposed to work
that way, your milage may vary)

Commandline : -a

b) Digital Signatures.
As it says. It's a digital signature. It's aim is to provide
authenticity of the sender, and it's purporse is twofold

a) Someone can't forge anothers post.
b) The poster cannot (really) deny not having posted it.

However, (also IMHO), I would advise you, and anyone else
who plans to use PGP to make use of the 'clearsig' function,
which allows the message text to be read with no processing,
And a digital signature is appended to the rear, which
can be processed if desired.

Commandline: -sat +clearsig=on

The clearsig can be set to default in CONFIG.TXT

IMPORTANT: Under packet, I should say that under no point of time, should
"e" or "c" be on the command line. These are the encryption
functions of the s/w, and encryption is not allowed.

Your milage _WILL_ vary regarding my post. But I do recall a discussion on this once, where someone (I presume is important) said digital signatures on packet is ok, as it's purporse is to authenticate the sender, and not to obscure the message.

Rgds!

# 4197. Re: CW operating procedures

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-15 00:11:33 UTC
From: gbrown@unlinfo.unl.edu
Message-ID: <3co1jl$7u8@crcnis3.unl.edu>
Source record: 255048

I'd say that anyone who "calls you to task" for ending your transmission with _KN_ should probably find something better to do.

Ending prosigns may be used in inappropriate ways, but it is hardly something to take issue with. In routine ham communications, at worst it may be momentarily confusing if you use the wrong one, but no big deal.

I've been operating CW since 1962, and unless I've been doing it wrong all those years (always possible) here's my understanding of ending prosigns:

_K_ simply means "over" or "go ahead". It does not preclude someone else "breaking in" to join the conversation. It is the most used ending prosign.

_KN_ means "go ahead only". You are in a QSO with someone and would like to continue un-interrupted by others until you are done. Reasons for this desire obviously vary with each person/contact.

_AR_ means "end of message". It often used in traffic handling.

The use of any of these together, such as _AR_ _KN_ or _AR_ _K_, is usually considered redundant. Old time CW ops do consider this a "novice accent", but most are polite about it.

_BK_ usually used as an "over" in a QSO that more closely approximates a normal conversation (short comments and exchanges rather than a series of monologues. Using _BK_ after giving each station's call is not considered good practice.

_SK_ means you are done with the QSO. Someone waiting to call you will call immediately after he/she hears this. If you are waiting for the other person's final, you probably shouldn't use this...it could be confusing, especially if propagation is such that the waiting station can not hear the other person. You can always finish up after his final with something like "73 DE WB0RTK _SK_".

Anyway, others may say different, but that's my understanding.

73,
Greg WB0RTK

## 4198. About TS-440S button problem

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-15 00:12:05 UTC
From: Mike.Czuhajewski@hambbs.wb3ffv.ampr.org
Message-ID: <1994Dec14.191205.14129@wb3ffv.wb3ffv.ampr.org>
Source record: 255042

I used to work part time in the service shop of a ham store, fixing rigs. I took care of a number of TS-440S'es with the keypad problem, and the best solution is to replace the entire keypad assembly. It is not cheap, and was running well over $50 at the time. If you are feeling very adventurous you can take it out, open it up and try to clean it out. However, it was not designed with this in mind, and doing it would be risky at best. As a service shop, where the customer was paying by the hour, it was far, far better to simply replace it than try to fix it; fixing it could end up taking longer, and with the element of risk it could be much more expensive--all that time trying to clean it, and ending up having to order a new one anyhow, with the clock ticking away all the time.

>
Well Brady, I am running something back in your vintage. I am using a
single Channel Motorola "Research Line" radio from 1956. It is a single
channel unit on 52.525 and has a power output of 30 watts and into a home
brew 1/2 wave antenna side mounting on my tower about 40 feet up. From
what I can tell I have a mobile to base range of 27 miles and have worked
all up and down the coast over to Texas when the band is open ( I am in
Illinois ). I have spent virtually nothing on this radio and I use it
when the band opens up or someone wants to chit chat locally. No repeaters
in this region with the nearest one over 130 miles away. I am unaware of
it's parameters.>

```
Ic> Hi Hugh, since 100 milliHenry would be many megohms at RF, it seems
Ic> obvious that the 100 microHenry is the correct choice which is
Ic> thousands of ohms at RF.
Ic> --
Ic> 73, Cecil, KG7BK, OOTC (All my own personal fuzzy logic, not Intel's)

Hi Cecil...yes, I should have put some real thought into that one...
100 mH would be more along the lines of an audio component than RF.
I've gone ahead and purchased the 100 uH choke and installed it.

It turns out that this wasn't the only misprint in the drawing of the
Techno-Whizzy article... they've got 2 uf caps for interstage coupling
... I don't thing much RF would be passing thru at several Mhz. and
more.

73 and thanks for the reply... Hugh VE3OYH

The "?" is the internationally recognized prosign to mean: "I just tuned up on frequency and heard what sounded like someone calling CQ but maybe it was someone signing off so if there is someone out there please come back with your call..."

Or something like that :)

I have experiences like this all the time. Once I was told to "not let the frequency hit me on the ass on the way out". Well, I decided to not let it bother me. See, the only way these ass wipes derive pleasure is when you let them know (on the air) you're pissed. Don't.. Just say 73 and have a nice night. If you really want to blow their mind, ask for a QSL card!

Whatever you do, don't let them know they bother you, it just keeps them going. Every group has loosers and assholes, even ham radio.

I don't think the FCC or the FBI will show much interest in hams interfering with hams. If a jammer is interfering with a government agency or annoying somone with a lot of political power, that will get their attention.

Hi Todd, guess I forgot to mention that I have one running as the LO
in a direct conversion receiver. The coil is an RF filter, not an RF
choke.

# 4205. Crossband repeating with 2 radios?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-15 04:45:13 UTC
From: harrisok@vax.sonoma.edu
Message-ID: <1994Dec14.204513.1@vax.sonoma.edu>
Source record: 255049

I am going to be interested in doing 70cm/2m cross band repeating from my mobile and instead of going the usual route using a dual band mobile, I'm interested in using separate VHF and UHF radios.

I am wondering if there is a commercially made interface of some sort that will connect the two radios together. It would need to be able to act as a controller and ID each band, have a time out timer, and hopefully be DTMF controllable to enable/disable repeating, etc.

Anybody have any ideas, brands in mind? Feel free to email me or post here so others can benefit, too.

Source record: 255051
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.swap

I'm looking for mods for Standard HTs, the C1xx models. I've seen mods around for C5xx and above, but don't seem to find any for the 'simplier' models.

Preferably, for the C150. It's very similar to the C158A, but this unit has no out of band rec (I believe it's only 144-148 or something like that). Or a service manual for this model.

Would appericiate pointers, ftp sites, etc. Please reply via email.

Thanks.

: Good stuff deleted.....
:
: In practice, AR and KN are often interchanged.
:
: etc...

I was always led to believe that K meant "over", KN meant "over only to ..." and I have never understood exactly what AR means :-).

I think that the key (pun intended) issue is making sure that we are not confusing the other station. For example, most people expect to hear K or KN when you turn it over. Those stations who dont use that procedure cause the other station to continue listening for the usual K or KN.

SK is another good practice, it means that I am finished with the QSO. CL on the other hand, means that I am clearing the frequency. I highly recommend using CL when you are shutting down the rig in case there is sombody who was planning on giving you a call. Example:
73 de NA5K CL

There is one procedure that I dont understand, that is the use of the question mark (?). For example, I finish sending CQ or signing off with some one and then another station sends "?". What is this supposed to mean? I never know quite how to answer, because I am not sure what they are asking :-).

I would like to point out one more thing. I work Mobile CW and I cant write down calls. So when you hear a station calling CQ that signs with the /M (mobile) please send your call more than once (at least 3 times). It is very confusing when a station answers me once and I have to send QRZ. Believe it or not, some of them again send their call only once after I send QRZ :-).

CU on 40 CW in the AM.

Smitty, NA5K/m

Part 4. Procedures (continued)

I had mentioned that the last 15 seconds of the silent period were reserved for safety (TTT) and urgent (XXX) preliminary broadcasts. The problem was that 10 or 20 shore stations might have such a broadcast to put out and none of them knew who else would be a sending one - the result was sometimes a mess. To hear a dozen shore stations trying to send at once:

TTT TTT TTT CQ DE ... was extremely funny!

Thus, some would start a bit earlier than H:17:45 or H:47:45. I would start hearing TTT TTT TTT CQ DE ... sometimes as early as the last 30 seconds of an SP. Now, EVERY shore station worked duplex and everyone wanted to be the first to get their broadcast out. The Japanese stations were always the most polite. I'd hear a New Zealand TTT and an Australia TTT and a Japanese TTT and the Japanese station would always stop his bcst to yield to the others. Once the freq was quiet then the Japanese station would start his TTT prelim again.

Oh, a prelim broadcast is the short announcement on 500 telling everyone to shift to one's working freq for the full bcst text:

XXX XXX XXX CQ DE VLA VLA VLA URGENT MARINE BCST MAN OVERBOARD QSW 472 UP

is a prelim bcst.

The Australian shore stns were a well-behaved unit (even though they might crush other countries trying to send prelims!). The following Aussie stations would take turns sending their prelims - as soon as one finished the next would start:

VII, VIA, VIR, VID, VIS, VIT, VIM, VIB.

The only New Zealand shore station I used to hear was: ZLZ. Other South Pacific shore stations I heard nightly were:

FJP - New Calidonia
3DP - Fiji Islands
P2M - Papua New Guinea
DUQ - Samoa
8BB - Indonesia
VJZ - New Britain
FUM - Tahiti (French Navy)
XSU - can't remember - used to hear a lot of X__ shore stations, and ones from Korea, Philippines, China, Central and South America...

West Coast North Pacific stations included:

NMQ - USCG Radio Long Beach CA
NMC - USCG Radio San Francisco CA
NOJ - USCG Radio Alaska
KFS - a commercial shore station in San Fran
KPH - another commercial in San Fran
KOK - a Honolulu commercial shore station

To hams, 500 would have been a DX'ers dream but we took the
excellent conditions for granted. Keep in mind though that we
had a *very* long longwire antenna (at least 1 mile in length!).

Not only would there be pile ups at the end of a silent period,
but also, at the top of each hour; that's when the low priority
``CQ CQ CQ DE ... WX AND TFC LIST QSW ... AR'' type of prelims
would go out. So, not wanting to take a number and wait for others,
prior to sending a prelim bcst I would always send: dit dit dit
(or I E) (i.e. .. . ) as a way of saying ``Hey - don't anyone
else send anything because I'm running 10 thousand Watts and in A2 and
I'll crush you...'' or something like that. Seriously, if I had
a safety or urgent to send at the end of an SP, as I was sending
my TTT or XXX I'd hear other countries under me as they started
their prelim and they would suddenly stop when they heard us;
NMO must have put out a commanding signal to the entire Pacific
for everyone to yield to us.

Generally, 500 was very orderly and eveyone was a gentleman.

4D. Frequency scheme.

Ships had a choice of using any of the following working frequencies:
425, 454, 468, 480, and 512 kc. Shore stations only had one fixed
working freq, so during an initial call on 500 a shore station
would give his working freq and the ship would choose one of
the above to get as close as possible (so as to work duplex):

3LF 3LF 3LF DE CKHB CKHB TR K
CKHB DE 3LF GE QSW 471 K
DE CKHB R 471/480 UP
R UP
EE
EE

Here, the ship CKHB called the shore stn 3LF wanting to pass a travel
report (TR); 3LF has a fixed working freq of 471 so the ship chose
to use 480: 471/480 means ``you use 471 and I'll use 480''.

Oh, if you haven't guessed, shore stations have 3 character callsigns, and
ships have 4 character calls (for the most part that is: Coast Guard
Monterey in Central California has the call NMC6).

So many folks have expressed their disbelief that there was this
type of activity just below the AM broadcast band, yet as a

young pup residing a few miles from NMQ (US Coast Guard Radio Long Beach, CA - now QRT) I knew there was something going on down below the rock and roll music. I would periodically hear some kind of mysterious sound, getting stronger as I tuned lower. This discovery not only prompted me to learn the code but to also take the cover off my AM band tube radio and `move' it down (boy did I screw up that radio). My initial code practice consisted of listening to NMQ sending their WX and traffic list - my radio had no BFO:

sheeesh shesh sheeesh shesh sheeesh sheeesh shesh sheeesh

was what I heard nightly.

End of Part 4.

>
>I am going to be interested in doing 70cm/2m cross band
>repeating from my mobile and instead of going the usual
Try the "basic repeater interface" from :
Electron Processing Inc.
PO Box 68
Cedar MI 49621
(616) 228-7020

Keep in mind that HT's have inferior front end selectivity compared to most mobiles and thus will have inferior performance as repeaters.... but should work OK with careful frequency choices for crossbanding and local use, i.e., close enough for the crossband user to be strong enough signal strength wise to overcome the desense and noise generated by the transmitter operating in such close proximity to the receiver.

Had to relay this. It is pretty funny. Came from the RISKS forum.

Clark , WA3JPG

**********

From ba.broadcast -

The following is an INEXACT quote from KCBS, one of our all-news radio stations:

...the police have called the bomb squad to defuse the hand grenades. Until the grenades are defused, the police have prohibited the use of 2-way radios in the vicinity of the scene here, so we are reporting by cellular phone instead of radio.

Somebody needs to tell the folks at KCBS the meaning of "radio."

Somebody also needs to give the police a clue.

# 4213. HAM-server Information

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-15 07:15:02 UTC
From: HAMSinfo@GRAFex.sbay.org
Message-ID: <gate.RNXcXc1w165w@GRAFex.sbay.org>
Source record: 254636
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way to get amateur radio related programs and other information. It is not directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac and OS/2 files available. I'm always on the look out for more (particularly Mac and OS/2). See below.

General Information:
==========

There is a daily limit of ALL requests of 3-megs. There is an individual limit of 1.2-megs. If there are a series of files you want to order, stretch them out over a few days, rather than ordering all at once. That way, you are almost assured of getting them all, and you won't be blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
==========

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately for return delivery.

If you are using a PC and you do not have UUDECODE, follow these steps:

1. Order UUDECODE.BAS or UUDECODE.C, and UUEXE524.ZIP.
2. Compile UUDECODE.BAS or UUDECODE.C on your system.
3. Use the resulting executable to UUDECODE UUEXE524.ZIP. UUEXE524 has

documentation about UUENCODE/UUDECODE.

You are all set to start ordering binary files from HAM-server.

Some Reasons Why Ordered Files Are Not Received:
==========

1. Your return path is incorrect. My bounce mailbox fills up quite regularly with messages. And, since the path is incorrect, I cannot contact you to let you know.

2. You have spelled the file name incorrectly.

3. The file name has changed since the INDEX was generated. Order a new INDEX.

4. You sent your order to me personally or in reply to this post. Orders are only honored when sent to HAM-server@grafex.sbay.org. That's the way the software works.

Try the PING command to check that the path is open.

YOUR HELP IS NEEDED:
==========

If you have a program you would like placed on HAM-server, you can email it uuencoded (DOS and OS/2) or binhexed (Mac) to incoming@grafex.sbay.org. This email address is set up to flag me that there is something new that I need to take care of quickly.
